**Quality and Safety in Radiation Oncology** Adam P. Dicker, MD, PhD, Eric C. Ford, PhD, Tim R. Williams, MD, 2016-08-17 Quality and Safety in Radiation Oncology is the first book to provide an authoritative and evidence-based guide to the understanding and implementation of quality and safety procedures in radiation oncology practice. Alongside the rapid growth of technology and radiotherapy treatment options for cancer in recent years, quality and safety standards are not only of the utmost importance but best practices ensuring quality and safety are crucial aspect of modern radiation oncology training. A detailed exploration and review of these standards is a necessary part of radiation oncologist's professional competency, both in the clinical setting and at the study table while preparing for board review and MOC exams. Chapter topics range from fundamental concepts of value and quality to commissioning technology and the use of metrics. They include perspectives on quality and safety from the patient, third-party payers, as well as from the federal government. Other chapters cover prospective testing of quality, training and education, error identification and analysis, incidence reporting, as well as special technology and procedures, including MRI-guided radiation therapy, proton therapy and stereotactic body radiation therapy (SBRT), quality and safety procedures in resource-limited environments, and more. State-of-the-art quality assurance procedures and safety guidelines are the backbone of this unique and essential volume. Physicians, medical physicists, dosimetrists, radiotherapists, hospital administrators, and other healthcare professionals will find this resource an invaluable compendium of best practices in radiation oncology. Key Features: Case examples illustrate best practices and pitfalls Several dozen graphs, tables and figures help quantify the discussion of quality and safety throughout the text Section II covers all aspects of quality assurance procedures for the physicist

**Health Systems Recovery in the Context of COVID-19 and Protracted Conflict** Zsuzsanna Jakab, Sohel Saikat, Duncan Selbie, Saqif Mustafa, Yu Zhang, Geraldine McDarby, Mila Petrova, Redda Seifeldin, 2023-07-10 The COVID-19 pandemic has caused unprecedented disruption worldwide highlighting once again the interdependency of health and socioeconomic development, and the global lack of health systems resilience. Two years into the pandemic, most countries report sustained disruptions across service delivery platforms and health areas with a profound impact on health outcomes. The impact of these disruptions is magnified within marginalized communities and in countries experiencing protracted conflict. There is an urgent need to focus on recovery through investment in the essential public health functions (EPHFs) and the foundations of health systems with a focus on primary health care, and whole-of-government and -society engagement. The aim of this Research Topic is to gather, transfer and promote operationalization of key experiences from COVID-19 to inform global and country level recovery that better promote health; guide policy direction towards building health systems resilience; and thereby ensure economic and

social prosperity. Experience with COVID-19 has demonstrated that traditional approaches to health system strengthening have failed to achieve the complementary goals of Universal Health Coverage (UHC) and health security with the divide between the most vulnerable and well-off only widening. Much of what had been learned from previous experiences such as Ebola in West Africa has not been widely applied. This has left health and economic systems vulnerable to 21 st century public health challenges, ranging from conflict and natural disasters to aging demographics and rising rates of non-communicable and communicable diseases and antimicrobial resistance. These challenges require intentional focus and investment as well as whole-of-government and -society engagement with health to build health system resilience. Greater action is needed to prevent the devastating effects of war and conflict on the health of the most vulnerable. This Research Topic will convene the knowledge and practices of leaders in public health, health systems, and humanitarian and development sectors. This is to ensure lessons from COVID-19 inform the recovery agenda and promote sustainable health and socioeconomic recovery for all. Lest we forget and find ourselves again unprepared and vulnerable in the face of an even greater threat.

**Digital Forensics Basics** Nihad A. Hassan, 2019-02-25 Use this hands-on, introductory guide to understand and implement digital forensics to investigate computer crime using Windows, the most widely used operating system. This book provides you with the necessary skills to identify an intruder's footprints and to gather the necessary digital evidence in a forensically sound manner to prosecute in a court of law. Directed toward users with no experience in the digital forensics field, this book provides guidelines and best practices when conducting investigations as well as teaching you how to use a variety of tools to investigate computer crime. **Connected Vehicles in the Internet of Things** Zaigham Mahmood, 2020-01-13 This book presents an overview of the latest smart transportation systems, IoV connectivity frameworks, issues of security and safety in VANETs, future developments in the IoV, technical solutions to address key challenges, and other related topics. A connected vehicle is a vehicle equipped with Internet access and wireless LAN, which allows the sharing of data through various devices, inside as well as outside the vehicle. The ad-hoc network of such vehicles, often referred to as VANET or the Internet of vehicles (IoV), is an application of IoT technology, and may be regarded as an integration of three types of networks: inter-vehicle, intra-vehicle, and vehicular mobile networks. VANET involves several varieties of vehicle connectivity mechanisms, including vehicle-to-infrastructure (V2I), vehicle-to-vehicle (V2V), vehicle-to-cloud (V2C), and vehicle-to-everything (V2X). According to one survey, it is expected that there will be approximately 380 million connected cars on the roads by 2020. IoV is an important aspect of the new vision for smart transportation. The book is divided into three parts: examining the evolution of IoV (basic concepts, principles, technologies, and architectures), connectivity of vehicles in the IoT (protocols, frameworks, and methodologies), connected vehicle environments and advanced topics in VANETs (security and safety issues, autonomous operations, machine learning, sensor technology, and AI). By providing scientific contributions and workable suggestions from researchers and practitioners in the areas of IoT, IoV, and security, this valuable reference aims to extend the body of existing knowledge.
