*Pro Oracle Database 10g RAC on Linux* John Shaw, Julian Dyke, 2008-01-03 \* Only book on the market to actually show you how to build an Oracle RAC cluster on Linux. \* Author expertise & quality: Steve Shaw's Hammerora project is one of the most visited sites in SourceForge.net. Julian Dyke is Chair of UK Oracle User Group RAC SIG and a member of the Oak Table Network. \* Based on latest Oracle release (10g R2) which we anticipate being the release where the largest number of customers migrate from existing single instance databases to RAC clusters. \* Linux is highest growth sector in relational database market and Oracle has 69% of that market (Gartner).

Oracle Backup and Recovery James Seo, "The developer who has failed in design can be forgiven, but the administrator who has failed in backup and recovery cannot be forgiven." Just as the above indicates, backup and recovery requires a lot of experiences and knowledge along with discretion. However, it would be too risky to learn the backup and recovery by practicing it, because a simple failure in the backup and recovery will generate tremendous loss. That is why you have to study how to respond and keep a good book at hand so that you can get help from the book whenever you want. In this sense, I can guarantee that this book will serve as a strong anchor when you are in trouble. One of the characteristics of the book is that it presents various types of errors and failures you may encounter at the field. It analyzes error and failure causes from the different perspectives, and explains how to actually do the recovery, particularly focusing on the practical work. It also contains many case-by-case scenarios that are easy to find, so you can get the solutions you need without any difficulty. For example, when you start up the

Oracle you may face “ORA-00205: error in identifying control file, check alert log for more info” message and see the Oracle server doesn’t start. In this case, you can refer to the case 1 in the chapter 5 to immediately know the solution. If you drop a table by mistake, you may refer to the chapter 9 in order to recover the table without stopping the server. If you want to respond to the errors and failures that happen in a RAC environment, you can go to the chapter 12 and refer to the cases of various error types. Simply speaking, this book classifies all the errors and failures based on their types, and explains their causes and the responses to them. Sometimes you may successfully do the recovery, not knowing how the recovery is done. This is because you simply memorize how to respond. If you understand the principles of the recovery, going beyond simple memorization, you can always respond to a more complex and difficult situation. Understanding the principles will help you put your knowledge to practical use. Various examples and easy explanations on the principles of the book will surely enhance your ability to apply your knowledge. Make sure you keep this book in order to become the professional engineer who never fails in backup and recovery! 1. Oracle Recovery Principles 2. No Archive Log Mode and Archive Log Mode 3. Oracle Backup 4. Parameter File Management and Recovery 5. Control File Recovery 6. Log Miner Use and Redo Log File Error 7. Data File Error and User Error Recovery 8. Data Migration 9. Emergency Recovery in DB Open 10. Flashback 11. Recovery Manager (RMAN) 12. RAC Backup and Recovery (Raw device) 13. Block Corruption Recovery

*Mobile Forensics - The File Format Handbook* Christian Hummert, Dirk

Pawlaszczyk, 2022 This open access book summarizes knowledge about several file systems and file formats commonly used in mobile devices. In addition to the fundamental description of the formats, there are hints about the forensic value of possible artefacts, along with an outline of tools that can decode the relevant data. The book is organized into two distinct parts. First, Part I describes several different file systems that are commonly used in mobile devices: APFS is the file system that is used in all modern Apple devices including iPhones, iPads, and even Apple Computers, like the MacBook series. Ext4 is very common in Android devices and is the successor of the Ext2 and Ext3 file systems that were commonly used on Linux-based computers. The Flash-Friendly File System (F2FS) is a Linux system designed explicitly for NAND Flash memory, common in removable storage devices and mobile devices, which Samsung Electronics developed in 2012. The QNX6 file system is present in Smartphones delivered by Blackberry (e.g. devices that are using Blackberry 10) and modern vehicle infotainment systems that use QNX as their operating system. Second, Part II describes five different file formats that are commonly used on mobile devices: SQLite is nearly omnipresent in mobile devices with an overwhelming majority of all mobile applications storing their data in such databases. The second leading file format in the mobile world are Property Lists, which are predominantly found on Apple devices. Java Serialization is a popular technique for storing object states in the Java programming language. Mobile application (app) developers very often resort to this technique to make their application state persistent. The Realm database format has emerged over recent years as a possible successor to the now ageing SQLite format and

has begun to appear as part of some modern applications on mobile devices. Protocol Buffers provide a format for taking compiled data and serializing it by turning it into bytes represented in decimal values, which is a technique commonly used in mobile devices. The aim of this book is to act as a knowledge base and reference guide for digital forensic practitioners who need knowledge about a specific file system or file format. It is also hoped to provide useful insight and knowledge for students or other aspiring professionals who want to work within the field of digital forensics. The book is written with the assumption that the reader will have some existing knowledge and understanding about computers, mobile devices, file systems and file formats.
