This book, edited by two experienced surgeons and a clinical psychologist in cooperation with numerous worldwide leading experts, presents clinically relevant information for gastroenterologists, internists, surgeons, residents and also nurses, who frequently care for GERD patients. Focusing on different treatment concepts – medical, endoscopic as well as surgical – the chapters include the basics of symptomatology and epidemiology, pathophysiology, GERD among different age groups, complications and its treatment, hiatal hernia or H. pylori and GERD, NERD and functional heartburn, diagnostic procedures and also presurgical examination. In addition, the patient's perspectives of disease, diagnostics and treatment are included, the same as economic aspects of GERD, and the impact of disease on quality of life or patient-reported outcomes after treatment.

Diagnosis and Treatment of Gastroesophageal Reflux Disease Michael F. Vaezi, 2015-07-21 This volume presents the most recent developments in diagnosis and treatment of patients with gastroesophageal reflux disease (GERD) and those who continue to be refractory to conventional GERD therapies. The book delineates the role of newly developed endoscopic therapies in GERD and outlines the best candidates for surgical fundoplication. Topics as the risks associated with GERD, lifestyle modification in GERD and the role of H2RA and proton pump inhibitor therapy in treating reflux disease are also explored. Written by authorities in the field, Diagnosis and Treatment of Gastroesophageal Reflux Disease is a concise yet comprehensive resource that is useful for primary care providers, gastroenterologists, pulmonologists, surgeons and ENT specialists.

Reflux Aspiration and Lung Disease Alyn H. Morice, Peter W. Dettmar, 2018-07-04 Reflux is an important factor in many different lung diseases and its manifestations are under recognised. The pathological basis of reflux has recently undergone major changes and clinicians' understanding has improved with diagnostic technology. This book aims to educate and inform professionals of these latest developments and give practical advice to their application in the clinical setting. It contains contributions written by world experts discussing their latest research, ideas and future directions in this fast moving area. Pharmacological, surgical and behavioural techniques in the prevention and treatment of reflux are discussed in each chapter. Special circumstances, such as eosinophilic inflammation in relation to asthma, cough and eosinophilic bronchitis are also highlighted. This book brings together the various different strands of research in reflux in relation to airways disease, to provide readers with a board summary of how the different but overlapping areas impacted by reflux affect the respiratory tract.

Diagnostic Atlas of Gastroesophageal Reflux Disease Parakrama T. Chandrasoma, 2011-08-29 Gastroesophageal reflux is one of the most common maladies of mankind. Approximately 40% of the adult population of the USA suffers from significant heartburn and the numerous antacids advertised incessantly on national television represents a \$8 billion per year drug market. The ability to control acid secretion with the increasingly effective acid-suppressive agents such as the H2 blockers (pepcid, zantac) and proton pump inhibitors (nexium, prevacid) has given physicians an excellent method of treating the symptoms of acid reflux. Unfortunately, this has not eradicated reflux disease. It has just changed its nature. While heartburn, ulceration and strictures have become rare, reflux-induced adenocarcinoma of the esophagus is becoming increasingly common. Adenocarcinoma of the esophagus and gastric cardia is now the most rapidly increasing cancer type in the Western world. At present, there is no histologic test that has any practical value in the diagnosis of reflux disease. The only histologic diagnostic criteria are related to changes in the squamous epithelium which are too insensitive and nonspecific for effective patient management. It is widely recognized that columnar metaplasia of the esophagus (manifest histologically as cardiac, oxyntocardiac and intestinal epithelia) is caused by reflux. However, except for intestinal metaplasia, which is diagnostic for Barrett esophagus, these columnar epithelia are not used to diagnose reflux disease in biopsies. The reason for this is that these epithelial types are indistinguishable from normal gastric cardiac mucosa. In standard histology texts, this normal gastric cardia is 2-3 cm long. In the mid-1990s, Dr. Chandrasoma and his team at USC produced autopsy data suggesting that cardiac and oxyntocardiac mucosa is normally absent from this region and that their presence in biopsies was histologic evidence of reflux disease. From this data, they determined that the presence of cardiac

mucosa was a pathologic entity caused by reflux and could therefore be used as a highly specific and sensitive diagnostic criterion for the histologic diagnosis of reflux disease. They call this entity reflux carditis. In addition, the length of these metaplastic columnar epithelia in the esophagus was an accurate measure of the severity of reflux disease in a given patient. At present, there is some controversy over whether cardiac mucosa is totally absent or present normally to the extent of 0-4 mm. While this should not be a deterrent to changing criteria which are dependent on there normally being 20-30 cm of cardiac mucosa, there has been little mainstream attempt to change existing endoscopic and pathologic diagnostic criteria in the mainstream of either gastroenterology or pathology. The ATLAS will be the source of easily digestible practical information for pathologists faced with biopsies from this region. It will also guide gastroenterologists as they biopsy these patients. The American Gastroenterological Association claims there are 14,500 members worldwide who are practicing physicians and scientists who research, diagnose and treat disorders of the gastrointestinal tract and liver According to the American Society for Clinical Pathology, there are 12,000 board certified pathologists in the U.S. Adenocarcinoma of the esophagus and gastric cardia is now the most rapidly increasing cancer type in the Western world Approximately 40% of the adult population of the U.S. suffers from significant heartburn and the numerous antacids advertised on national television represents an \$8 billion per year drug market

Gastroesophageal Reflux Disease, An issue of Gastroenterology Clinics of North America, Joel E Richter, 2014-02-18 Gastroesophageal reflux disease and its complications effect 40 % of the US population. It is the most common reason for outpatient GI visits with treatment costs amounting to nearly \$10 billion a year. This issue updates interested physicians on the new advance in GERD pathogenesis, diagnosis and medical/surgical treatment , especially over the last 5 years. Lots of advancements have been made in this time period and this will be a excellent reference book for the busy academic and community physician interested in GERD.

Multidisciplinary Management of Gastroesophageal Reflux Disease Sebastian F. Schoppmann, Martin Riegler, 2020-09-19 This book presents a new, multi- and interdisciplinary approach to gastroesophageal reflux disease (GERD) and Barrett's esophagus that reflects the latest advances in understanding of the disease. The role of each of the available diagnostic techniques, including endoscopy, histopathology, esophageal manometry, reflux monitoring, and EndoFLIP assessment, is carefully explained. The use of endoscopy for the purposes of mucosal ablation (radiofrequency ablation, cryoablation) and mucosal resection is described, and all aspects of anti-reflux surgery are covered, with detailed explanation of indications and techniques for standard fundoplication, endoscopic fundoplication, and surgical procedures using the LINX system and the EndoStim device. To assist the reader further, a novel interdisciplinary algorithm is presented for GERD diagnosis and treatment. In addition, the latest diagnostic and therapeutic approaches (including endoscopic and surgical resection and chemoradiation) are also presented for esophageal cancer and cancer palliation. A key feature of the book is its recognition of the contribution of different specialties in the management of GERD, and it will accordingly appeal to a wide range of practitioners.

The Rise of Acid Reflux in Asia Prateek Sharma, Shobna Bhatia, Khean Lee Goh, 2017-10-28 GERD is the most common gastrointestinal disease in the world affecting over 10-20% of the adult population. GERD is often perceived as a Western disease and very little literature available about this disease in the Asian population. With growing obesity and westernization in Asia, the prevalence of GERD is rapidly increasing. With growing morbidity and health care cost there is a significant need for understanding the disease from the Asian perspective. This book would fill the gap in the knowledge on GERD among Asians and will highlight the difference in terms of epidemiology, diagnosis and management of GERD from the Western perspective. The novel imaging, diagnostic modalities and treatment aspects will be essentially highlighted in this book. It also deals about the pathogenesis and risk factors of Asians for the development of GERD which have not been explored before. Another important difference is that the book would be dealing with symptom perception and cultural factors affecting the diagnosis and management of this common disorder. Finally, the surgical outcomes of GERD

among Asians will be discussed. Information on these topics is limited.
