Handbook of Functionalized Nanomaterials Chaudhery

Mustansar Hussain,Vineet Kumar,2021-08-23 Handbook of Functionalized Nanomaterials: Environmental Health and Safety discusses the reactive properties of FNMs used in a range of applications, and their toxic impact on the environment. Nanomaterials have unique properties that can make them highly reactive. This reactivity can cause unwanted interactions with living cells, an increase in oxidative stress or damage to genetic material - resulting in damage to the environment and local wildlife. This negative impact is often further increased after surface functionalization of nanomaterials with other materials which offer unique properties of their own. To ensure environmental safety and ecological balance, rigorous toxicity testing of functionalized nanomaterials (FNMs) is necessary. This book discusses the toxicological uncertainties of FNMs and the limitations of FNMs in a range of applications. Later chapters propose methods to reliably assess the harm that functionalized nanomaterials can cause to the environment and wildlife, as well covering recent developments in the field of environmental health safety. The book concludes with a discussion on the future prospects of safe functionalized nanomaterials. Offers a novel, integrated approach, bridging the gap between FNMs and environmental health and safety Analyses the reactive properties of FNMs and their toxicological potential Provides an in-depth look at the impact of functionalized nanomaterials on the environment

Contrast Agents | Werner Krause, 2003-07-01 Extracellular MRI and X-ray contrast agents are characterized by their pharmacokinetic behaviour. After intravascular injection their plasma-level time curve is characterized by two phases. The agents are rapidly distributed between plasma and interstitial spaces followed by renal elimination with a terminal half-life of approximately 1–2 hours. They are excreted via the kidneys in unchanged form by glomerular filtration. Extracellular water-soluble contrast agents to be applied for X-ray imaging were introduced into clinical practice in 1923. Since that time they have proved to be most valuable tools in diagnostics. They contain iodine as the element of choice with a sufficiently high atomic weight difference to organic tissue. As positive contrast agents their attenuation of radiation is higher compared with the attenuation of the surrounding tissue. By this contrast enhancement X-ray diagnostics could be improved dramatically. In 2,4,6-triiodobenzoic acid derivatives iodine is firmly bound. Nowadays diamides of the 2,4,6-triiodo-5-acylamino-isophthalic acid like iopromide (Ultravist, Fig. 1) are used as non-ionic (neutral) X-ray contrast agents in most cases [1].

Nephrology Forum J.J. Cohen, J.T. Harrington, J.P. Kassirer, 2012-12-06 A few years ago, as the editor of *Kidney International*, I was approached by Drs. Cohen, Kassirer, and Harrington who suggested that a new feature should be included in each monthly issue of the journal. They suggested that it should employ a case discussion format such as that used frequently at specialty rounds in teaching hospitals, and that the discussion should place a special emphasis on the relationship between basic science and important problems in clinical nephrology. The summary of an actual patient history would first be presented to

exemplify a particular clinical problem, a seasoned person of proven expertise would be invited to deliver a well-documented analysis of the relevant issues, and perhaps most ambitiously of all, a critical audience would be assembled to challenge the principal discussant in an open ended, question-and-answer period. The entire affair would be recorded at the time of the live conference and transcribed subsequently in preparation for publication as a Nephrology Forum. I must confess that I was somewhat hesitant at first to endorse their proposal because, at the time, Kidney International had just begun to establish a solid reputation for the publication of high quality, peer reviewed manuscripts dealing with the clinical and laboratory research interests of the international nephrological community.
