The Biopolitics of Breast Cancer Maren Klawiter, 2008 For nearly forty years, feminists and patient activists have argued that medicine is a deeply individualizing and depoliticizing institution. According to this view, medical practices are incidental to people's transformation from patients to patient activists. The Biopolitics of Breast Cancer turns this understanding upside down. Maren Klawiter analyzes the evolution of the breast cancer movement to show the broad social impact of how diseases come to be medically managed and publicly administered. Examining surgical procedures, adjuvant therapies, early detection campaigns, and the rise in discourses of risk, Klawiter demonstrates that these practices created a change in the social relations-if not the mortality rate-of breast cancer that initially inhibited, but later enabled, collective action. Her research focuses on the emergence and development of new forms of activism that range from grassroots patient empowerment to environmental activism and corporate-funded breast cancer awareness. The Biopolitics of Breast Cancer opens a window onto a larger set of changes currently transforming medically advanced societies and ultimately challenges our understanding of the origins, politics, and future of the breast cancer movement. Maren Klawiter holds a PhD in sociology from the University of California, Berkeley. She is currently pursuing a law degree at Yale University.

Concurrency Control and Recovery in Database Systems Philip A. Bernstein, Vassos Hadzilacos, Nathan Goodman, 1987

Concurrency Control and Reliability in Distributed Systems Bharat K. Bhargava, 1987 The major objective of a distributed system is to provide low cost availability of the resources of the system by localizing access and providing insulation against failures of individual components. Since many

users can be concurrently accessing the system, it is essential that a distributed system also provide a high degree of concurrency. Research into algorithms has been focused on concurrency, consistency, failure detection, management of replicated copy, and commitment and termination of transactions. This book is a compilation of a subset of research contributions in the area of concurrency control and reliability in distributed systems, with brief explorations of interesting areas, including theoretical and experimental efforts.
