Managing Microsoft's Remote Installation Services Soren Rasmussen, Michael Iversen, 2011-04-08 BRIEF DESCRIPTION OF CONTENT: The authors have been working with Remote Installation Services since its birth in 1999. We are really enthusiastic about working with it. From their experiences from very different customers with very different requirements to their Windows infrastructure environment, they have gained a tremendous deal of experience and in-depth knowledge with Remote Installation Services that other people can benefit from. This includes basic understanding, a lot of theory and best-practices, but also how you can stretch Remote Installation Services to really do what any system or network administrator would require. This information is essential for anyone wishing to implement Remote Installation Services and use the advanced features and tools it contains. There is much more than up grades, adding and deleting programs from a central administrator that can be done. In addition it can save the cost adding a costly third party software package like Alteris to the enterprise network. This is the reason that the authors are now gathering all the experience and knowledge, and focusing on forming a single point of entry to everything you must know about Remote Installation Services in form of a book. Note based on my (TRS) and reviewers comments the book will be over 320 pages as authors add numerous consulting client examples and illustrations. UNIQUE FEATURE: Book is excellent companion to Windows and Exchange series and WMI books by Lissor: Authors are top quality IBM Consultants · Gives Network and Systems Administrators real tools to manage up grades, program modifications and system and security related tools · Presents a balance of theory and methods with best-practices the authors have developed in their consulting work · Shows how an enterprise can save the cost adding a costly third party software package like Alteris to the enterprise network

Application Administrators Handbook Kelly C Bourne, 2013-09-16 An application administrator installs, updates, optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party, but they may have been developed internally. Examples of application types include enterprise resource planning (ERP), customer resource management (CRM), and point of sale (POS), legal contract management, time tracking, accounts payable/receivable, payroll, SOX compliance tracking, budgeting, forecasting and training. In many cases, the organization is absolutely dependent that these applications be kept running. The importance of application administrators and the level to which organizations depend upon them is easily overlooked. Application Administrators Handbook provides an overview of every phase of administering an application, from working with the vendor before installation, the installation process itself, importing data into the application, handling upgrades, working with application users to report problems, scheduling backups, automating tasks that need to be done on a repetitive schedule, and finally retiring an application. It provides detailed, hands-on instructions on how to perform many specific tasks that an application administrator must be able to handle. Learn how to install, administer and maintain key software applications

throughout the product life cycle Get detailed, hands-on instructions on steps that should be taken before installing or upgrading an application to ensure continuous operation Identify repetitive tasks and find out how they can be automated, thereby saving valuable time Understand the latest on government mandates and regulations, such as privacy, SOX, HIPAA, PCI, and FISMA and how to fully comply

Creating and Managing Virtual Machines and Networks Through Microsoft Azure Services for Remote Access Connection Dr. Hidaia Mahmood Allassouli,2021-03-08 Microsoft Azure, commonly referred to as Azure is a cloud computing service created by Microsoft for building, testing, deploying, and managing applications and services through Microsoft-managed data centers. It provides software as a service (SaaS), platform as a service (PaaS) and infrastructure as a service (IaaS) and supports many different programming languages, tools, and frameworks, including both Microsoft-specific and third-party software and systems. The major benefit of a remote desktop connection is being able to connect to your data from anywhere in the world. Your data is in one place that is easy to see and you no longer have to have software installed on your own computer. Azure is one of the best virtual computers and networks providers for remote desktop (RDP) connections. When you create Azure account, you pay as you go. You purchase Azure services with pay-as-you-go pricing. You pay only for what you use each month, with no upfront commitment, and cancel anytime. You must add your credit/debit card for billing to use pay as you go subscription. But I was looking for totally free subscription where I don't need to add my credit card for billing. I found there are two possible options for that: 1) A sandbox gives you access to Azure resources. Your Azure subscription will not be charged. The sandbox may only be used to complete training on Microsoft Learn. Creating the Azure Virtual machines using sandbox which is learning subscription, you can connect to the VM via RDP port but you cannot access to Internet through the Internet Explorer. 2) Alternatively Microsoft Azure provides a free \$100 credit for students accounts registered through university emails (free student subscription for around one year). There is internet access in the VM machine under this type of subscription. Azure documentations is too deep and it is hard to be understood creating and managing virtual computers and networks in Azure for remote access connection by any beginner. So, I tried to outline in this report the most important topics as reference guide to assist the user to create and manage virtual computers and networks in Azure for remote access connection in simplified and clear way. This report will include the following parts: 1. Getting free Azure subscription through Sandbox Microsoft Learn subscription (No credit card needed) 2. Free 12 months, then pay-as-you-go Azure account subscription (Credit card needed) 3. Student subscription (No debit/credit cards needed) 4. How to get university email 5. Virtual networks and virtual machines in Azure 6. Quick start for PowerShell in Azure Cloud Shell 7. Quick start with Azure PowerShell 8. Installing Azure CLI on Windows and creating virtual machine 9. Creating a Windows virtual machine in Azure 10. Quick start to create a Linux virtual machine in the Azure portal 11. Tutorial to create a NAT Gateway using the Azure portal and test the NAT service 12. What is Azure Network Watcher? 13. Network Watcher Agent 14. Troubleshoot connections with Azure Network Watcher using the Azure portal 15. Troubleshoot Azure VM connectivity problems 16. Quick start to configure Load Balancer 17. Quick start to configure VPN Gateway using Azure portal 18. Tutorial to connect to a virtual machine using Azure Bastion 19. Exercise to create Windows Virtual Machine 20. Managing by Remote Control Peter R Garber,1998-12-22 Point. Click. Done! What a world this would be if everything worked as easily and efficiently as your TV set's remote control. Today's managers could definitely use such convenience in their day-to-day dealings. Many of them face

far too many responsibilities for one person. Traditional empowerment, allowing support staff to take on some of the overload, often produced less-than-desirable results. Even so, some form of empowerment has become an absolute necessity for maxed-out managers. If you suffer from nagging, stressful management overload... Managing by Remote Control now brings you relief! Peter R. Garber, a manager of teamwork development, offers new concepts and techniques to make empowerment practical. He tells why and how past methods failed-and replaces those with more effective measures. Eventually, your capable support staff will make decisions, and solve problems as if a manager were always present and calling the shots. By comparing his techniques and philosophies to the functions of a TV set's remote control, Garber takes an entertaining and humorous approach to the subject. Even those who would rather watch TV than read a business book will find Managing by Remote Control entertaining-and informative. Don't wait for rerun season-read it soon!
