⏺ **Creating and Managing Virtual Machines and Networks Through Microsoft Azure Services for Remote Access Connection** Dr. Hedaya Mahmood Alasooly,2021-02-04 Microsoft Azure, commonly referred to as Azureis a cloud computing service created by Microsoft for building, testing, deploying, and managing applications and services through Microsoft-managed data centers. It provides software as a service (SaaS), platform as a service (PaaS) and infrastructure as a service (IaaS) and supports many different programming languages, tools, and frameworks, including both Microsoft-specific and third-party software and systems. The major benefit of a remote desktop connection is being able to connect to your data from anywhere in the world. Your data is in one place that is easy to see and you no longer have to have software installed on your own computer. Azure is one of the best virtual computers and networks providers for remote desktop (RDP) connections. When you create Azure account, you pay as you go. You purchase Azure services with pay-as-you-go pricing. You pay only for what you use each month, with no upfront commitment, and cancel anytime. You must add your credit/debit card for billing to use pay as you go subscription. But I was looking for totally free subscription where I don't need to add my credit card for billing. I found there are two possible options for that: 1) A sandbox gives you access to Azure resources. Your Azure subscription will not be charged. The sandbox may only be used to complete training on Microsoft Learn. Creating the Azure Virtual machines using sandbox which is learning subscription, you can connect to the VM via RDP port but you cannot access to Internet through the Internet Explorer. 2) Alternatively Microsoft Azure provides a free $100 credit for students accounts registered through university emails (free student subscription for around one year). There is internet access in the VM machine under this type of subscription. Azure documentations is too deep and it is hard to be understand creating and managing virtual computers and networks in Auzre for remote access connection by any beginner. So, I tried to outline in this report the most important topics as reference

guide to assist the user to create and manage virtual computers and networks in Azure for remote access connection in simplified and clear way. This report will include the following parts: Getting free Azure subscription through Sandbox Microsoft Learn subscription (No credit card needed) Free 12 months, then pay-as-you-go Azure account subscription (Credit card needed) Student subscription (No debit/credit cards needed) How to get university email Virtual networks and virtual machines in Azure Quick start for PowerShell in Azure Cloud Shell Quick start with Azure PowerShell Installing Azure CLI on Windows and creating virtual machine Creating a Windows virtual machine in Azure Quick start to create a Linux virtual machine in the Azure portal Tutorial to create a NAT Gateway using the Azure portal and test the NAT service What is Azure Network Watcher? Network Watcher Agent Troubleshoot connections with Azure Network Watcher using the Azure portal Troubleshoot Azure VM connectivity problems Quick start to configure Load Balancer Quick start to configure VPN Gateway using Azure portal Tutorial to connect to a virtual machine using Azure Bastion Exercise to create Window Virtual Machine Exercise to create Ubuntu Virtual Machine

⁇ **Introduction to Windows Server 2019** Gilad James, PhD, The Windows Server 2019 operating system is an improvement from its predecessor, Windows Server 2016. It offers various features that cater to the modern needs of businesses. One of the most significant changes in the server interface is its traditional Windows desktop that has been replaced with the Windows Admin Center. This change makes it more organized and faster to access critical features. Windows Server 2019 also features a new Storage Migration Service, which enables smooth transfers of data from previous Windows Server versions to the latest releases. The new server operating system offers a range of enhancements for security purposes, such as the Shielded Virtual Machines, powered by virtual TPMs and Advanced Threat Protection. Such features make it increasingly challenging for hackers to penetrate the system. Other critical enhancements include network performance improvements, PowerShell features, and Quick Create options. Overall, Windows Server 2019 provides businesses with various tools to meet the evolving needs for seamless integration, security, performance enhancements, flexibility, and accessibility. In conclusion, Windows Server 2019 is a robust and scalable operating system designed to cater to the needs of the current business landscape. From the insights in this introduction, it is evident that the enhanced features provided by Windows Server 2019 can improve the management and deployment of critical applications. It is an ideal upgrade for businesses looking to modernize their IT infrastructure and maintain a secure, productive, and efficient work environment.
