Network Management and Control I.T. Frisch,Manu Malek,S.S. Panwar,1994-08-31 Three speakers at the Second Workshop on Network Management and Control nostalgically remembered the INTEROP Conference at which SNMP was able to interface even to CD players and toasters. We agreed this was indeed a major step forward in standards, but wondered if anyone noticed whether the toast was burned, let alone, would want to eat it. The assurance of the correct operation of practical systems under difficult environments emerged as the dominant theme of the workshop with growth, interoperability, performance, and scalability as the primary sub-themes. Perhaps this thrust is un surprising, since about half the 100 or so attendees were from industry, with a strong contingency of users. Indeed the technical program co-chairs, Shivendra Panwar of Polytechnic and Walter Johnston of NYNEX, took as their assignment the coverage of real problems and opportunities in industry. Nevertheless we take it as a real indication of progress in the field that the community is beginning to take for granted the availability of standards and even the ability to detect physical, link, and network-level faults and is now expecting diagnostics at higher levels as well as system-wide solutions.

*Information Security Management & Small Systems Security* Jan H.P. Eloff,Les Labuschagne,Rossouw von Solms,Jan Verschuren,2013-04-17 The 7th Annual Working Conference of ISMSSS (Information Security Management and Small Systems Security), jointly presented by WG 11.1 and WG 11.2 of the International Federation for Information Processing {IFIP}, focuses on various state-of-art concepts in the two relevant fields. The conference focuses on technical, functional as well as managerial issues. This working conference brings together researchers and practitioners of different disciplines, organisations, and countries, to discuss the latest developments in (amongst others) secure techniques for smart card technology, information security management issues, risk analysis, intranets, electronic commerce protocols, certification and accreditation and biometrics authentication. We are fortunate to have attracted at least six highly acclaimed international speakers to present invited lectures, which will set the platform for the reviewed papers. Invited speakers will talk on a broad spectrum of issues, all related to information security management and small system security issues. These talks cover new perspectives on secure smart card systems, the role of BS7799 in certification, electronic commerce and smart cards, iris biometrics and many more. All papers presented at this conference were reviewed by a minimum of two international reviewers. We wish to express our gratitude to all authors of papers and the international referee board. We would also like to express our appreciation to the organising committee, chaired by Leon Strous, for all their inputs and arrangements.

*Windows 2000 Routing and Remote Access Services* Kackie Charles,2000 Annotation In 1996, Windows NT 4 introduced the typical administrator to point-to-point tunneling protocol (PPTP) and later added the Routing

and Remote Access Server (RRAS) up20000517. Now, with the advent of VPN technology, Windows 2000 network administrators have the capability to roll out network designs that will save money, be faster and easier to administer and maintain, and will solve many connectivity problems that are impractical to solve before. One of the most important changes in Windows 2000 is the addition of enhanced routing (the first R in RRAS) and better remote client services (the RAS). The key uses of these features are found in Microsoft's new virtual private networks (VPN) technology. The ever increasing number of mobile workers, as well as the demand for Internet access from every desktop has changed the face of the traditional network.

**SMS 2 Administration** Mike Lubanski,Darshan Doshi,2000 Michael Lubanski and Darshan Doshi, who have implemented one of the largest rollouts of SMS in a production environment, call upon their years of experience with SMS to demystify its complexities in SMS 2 Administration. Combining Mr. Lubanski's and Mr. Doshi's real-world knowledge with that of other systems management experts, this book provides practical advice on, and recommendations for, dealing with SMS administration. From concept and design through installation, configuration, security, usage and troubleshooting, SMS 2 Administration is a reference guide that uses realistic scenarios to help you make sense of SMS's sometimes confusing issues. With this book, not only will you understand SMS, you'll be able to deploy and maintain an SMS system in your own environment.

**Managing Service Level Quality** Peter Massam,2003-04-11 QoS (Quality of Service) and Network Management are old topics. However, the fusion of IP style multimedia and wireless networks (3G) means that network managers who might previously have dealt with one or the other, must now manage and provide service guarantees for the both. This is where Managing Service Level Quality across Wireless and Fixed Networks steps in. It begins by examining the mechanisms that already existed in fixed IP data networks prior to the introduction of probe and agent technology. A look at these later developments is then supplemented with a real-world scenario of how real time application performance monitoring can not only provide service level management but can also aid in root cause analysis. This same model is then applied to a wireless environment examining which elements are required to be able to deliver multimedia services across 2nd and 3rd generation mobile networks, detailing the components of data networking that will assist in guaranteeing service level performance and the constraints placed on those guarantees when passing services over an air interface to a wireless-enabled device. It asks a simple question: will multimedia applications and the guaranteed levels of service required by them work when traversing from fixed to wireless networks? It tracks QoS components and mechanisms of both environments and looks at what will provide the glue in this brave new converged world and also provides empirical data to back up the conclusions drawn. First book available which applies QoS techniques and technologies to wireless/mobile networks 3G/UMTS Deals with the search for the real time information that constitutes the customer experience in terms of application performance so that service levels can be verified against measurable and relevant data in a true end-to-end manner across both fixed and wireless networks Presents probe and agent technology Features a real-world scenario of how real time application performance monitoring can not only provide service level management but can also aid in root cause analysis - this will be of particular interest to practitioner Analyses which elements are required in order to deliver multimedia services across 2nd and 3rd generation mobile networks Details the components of data networking that will assist in guaranteeing service level performance Essential reading for Wireless and IP data network professionals/practitioners, network managers and architects, technical consultants, quality assessment engineers, infrastructure vendors, application developers, portal designers, wireline operators, lecturers, postgraduates, senior undergraduate students and industry trainees.
