Sams Teach Yourself TCP/IP in 24 Hours Joe

Casad,2008-09-15 In just 24 lessons of one hour or less, you will uncover the inner workings of TCP/IP. Using a straightforward, step-by-step approach, each lesson builds on the previous ones, enabling you to learn the essentials of TCP/IP from the ground up. Practical discussions provide an inside look at TCP/IP components and protocols. Step-by-step instructions walk you through many common tasks. Q&As at the end of each hour help you test your knowledge. Notes and tips point out shortcuts and solutions and help you steer clear of potential problems. If you're looking for a smart, concise introduction to the protocols that power the Internet, start your clock and look inside. *Sams Teach Yourself TCP/IP in 24 Hours* is your guide to the secrets of TCP/IP. Regulating Mergers and Acquisitions of U.S. Electric Utilities: Industry Concentration and Corporate Complication Scott Hempling, 2020-10-30 What happens when electric utility monopolies pursue their acquisition interests—undisciplined by competition, and insufficiently disciplined by the regulators

responsible for replicating competition? Since the mid-1980s, mergers and acquisitions of U.S. electric utilities have halved the number of local, independent utilities. Mostly debt-financed, these transactions have converted retiree-suitable investments into subsidiaries of geographically scattered conglomerates. Written by one of the U.S.'s leading regulatory thinkers, this book combines legal, accounting, economic and financial analysis of the 30-year march of U.S. electricity mergers with insights from the dynamic field of behavioral economics.

Water Infrastructure Ellen Crocker, Lisa Turner, 2002-12

Communities will need an estimated \$300 billion to \$1 trillion over the next 20 years to repair, replace, or upgrade aging drinking water & wastewater facilities; accommodate a growing pop'n.; & meet new water quality standards. This report examines: (1) how the amount of funds obtained by large public & private drinking water & wastewater utilities -- those serving populations greater than 10,000 -- through user charges & other local funding sources compare with their cost of providing service; (2) how such utilities manage existing capital assets & plan for needed capital improvements; & (3) what factors influence private companies' interest in assuming the operation or ownership of publicly owned

drinking water & wastewater facilities. Tables.

Power Generation, Operation, and Control Allen J. Wood,Bruce F. Wollenberg,Gerald B. Sheblé,2013-11-18 A thoroughly revised new edition of the definitive work on power systems best practices In this eagerly awaited new edition, Power Generation, Operation, and Control continues to provide engineers and academics with a complete picture of the techniques used in modern power system operation. Long recognized as the standard reference in the field, the book has been thoroughly updated to reflect the enormous changes that have taken place in the electric power industry since the Second Edition was published seventeen years ago. With an emphasis on both the engineering and economic aspects of energy

management, the Third Edition introduces central terminal characteristics for thermal and hydroelectric power generation systems, along with new optimization techniques for tackling real-world operating problems. Readers will find a range of algorithms and methods for performing integrated economic, network, and generating system analysis, as well as modern methods for power system analysis, operation, and control. Special features include: State-of-the-art topics such as market simulation, multiple market analysis, contract and market bidding, and other business topics Chapters on generation with limited energy supply, power flow control, power system security, and more An introduction to regulatory issues, renewable energy, and other evolving topics New worked examples and end-of-chapter problems A companion website with additional materials, including MATLAB programs and power system sample data sets

Power Transmission & Distribution, Second Edition Anthony J. Pansini,2020-11-27 Our ever-increasing dependence on electricity demands improvements in the quality of its supply. The deregulation of electric (and other) utilities, the events of 9/11, and the blackouts in North America, London, and the Italian peninsula evidence this need. This book looks at our current transmission systems and how loop circuits can substantially improve the reliability of transmission lines, essentially to provide a two-way feed to the consumer and insuring continuity of service if a fault develops on the circuit. It also covers distribution systems and includes information on how small generating units can be connected directly to the distribution system in the same manner as in larger cogenerating units.

Understanding Complex Urban Systems Christian

Walloth,Ernst Gebetsroither-Geringer,Funda Atun,Liss C.

Werner,2016-03-11 This book is devoted to the modeling and understanding of complex urban systems. This second volume of *Understanding Complex Urban Systems* focuses on the challenges of the modeling tools, concerning, e.g., the quality and quantity of data and the selection of an appropriate modeling approach. It is meant to support urban decision-makers—including municipal politicians, spatial planners, and citizen groups—in choosing an appropriate modeling approach for their particular modeling requirements. The contributors to this volume are from different disciplines, but all share the same goal: optimizing the representation of complex urban systems. They present and discuss a variety of approaches for dealing with data-availability problems and finding appropriate modeling approaches—and not only in terms of computer modeling. The selection of articles featured in this volume reflect a broad variety of new and

established modeling approaches such as: - An argument for using Big Data methods in conjunction with Agent-based Modeling; - The introduction of a participatory approach involving citizens, in order to utilize an Agent-based Modeling approach to simulate urban-growth scenarios; - A presentation of semantic modeling to enable a flexible application of modeling methods and a flexible exchange of data; - An article about a nested-systems approach to analyzing a city's interdependent subsystems (according to these subsystems' different velocities of change); - An article about methods that use Luhmann's system theory to characterize cities as systems that are composed of flows; - An article that demonstrates how the Sen-Nussbaum Capabilities Approach can be used in urban systems to measure household well-being shifts that occur in response to the resettlement of urban households; - A final article that illustrates how Adaptive Cycles of Complex Adaptive Systems, as well as innovation, can be applied to gain a better understanding of cities and to promote more resilient and more sustainable urban futures.

Energy Efficiency in Household Appliances Paolo

Bertoldi,Andrea Ricci,Boudewijn Huenges Wajer,2012-12-06 There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table I showed potential

global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings from efficiency standards or other programs to improve energy efficiency.

Letters, Power Lines, and Other Dangerous Things Ryan Ellis, 2020-03-03 An examination of how post-9/11 security concerns have transformed the public view and governance of infrastructure. After September 11, 2001, infrastructures—the mundane systems that undergird much of modern life—were suddenly considered “soft targets” that required immediate security enhancements. Infrastructure protection quickly became the multibillion dollar core of a new and expansive homeland security mission. In this book, Ryan Ellis examines how the long shadow of

post-9/11 security concerns have remade and reordered infrastructure, arguing that it has been a stunning transformation. Ellis describes the way workers, civic groups, city councils, bureaucrats, and others used the threat of terrorism as a political resource, taking the opportunity not only to address security vulnerabilities but also to reassert a degree of public control over infrastructure. Nearly two decades after September 11, the threat of terrorism remains etched into the inner workings of infrastructures through new laws, regulations, technologies, and practices. Ellis maps these changes through an examination of three U.S. infrastructures: the postal system, the freight rail network, and the electric power grid. He describes, for example, how debates about protecting the mail from anthrax and other biological hazards spiraled into larger arguments over worker rights, the power of large-volume mailers, and the fortunes of old media in a new media world; how environmental activists leveraged post-9/11 security fears over shipments of hazardous materials to take on the rail industry and the chemical lobby; and how otherwise marginal federal regulators parlayed new mandatory cybersecurity standards for the electric power industry into a robust system of accountability.
