**Windows 2000 Routing and Remote Access Services** Kackie Charles, 2000 Annotation In 1996, Windows NT 4 introduced the typical administrator to point-to-point tunneling protocol (PPTP) and later added the Routing and Remote Access Server (RRAS) up20000517. Now, with the advent of VPN technology, Windows 2000 network administrators have the capability to roll out network designs that will save money, be faster and easier to administer and maintain, and will solve many connectivity problems that are impractical to solve before. One of the most important changes in Windows 2000 is the addition of enhanced routing (the first R in RRAS) and better remote client

services (the RAS). The key uses of these features are found in Microsoft's new virtual private networks (VPN) technology. The ever increasing number of mobile workers, as well as the demand for Internet access from every desktop has changed the face of the traditional network.

*Incentivizing and retaining public servants in remote areas: A discrete choice experiment with agricultural extension agents in Ethiopia* Regassa, Mekdim D., Abate, Gashaw T., Kubik, Zaneta, 2020-07-08 Increased deployment of agricultural extension agents (EAs) in rural areas is grounded on their importance to spur agricultural productivity and mitigate spatial imbalances in welfare. However, the high turnover and the low motivation levels of EAs in remote areas pose challenges for equitable service provision and, in some cases, exacerbates geographic disparities. We assess the effectiveness of selected potential policy interventions to incentivize and retain EAs in remote areas of Ethiopia. To this end, we conducted a choice experiment to elicit preferences for job attributes of 761 EAs. We applied a random parameters logit model to estimate parameters of interest and to simulate the impact of possible policy interventions. The main results show that offering continuing education opportunities after two years of service increases uptake of an extension job in remote locations by 77 percentage points, which is significantly higher than the effect from doubling current salary levels (70 percentage points). EAs also expressed a strong preference for work environments with basic amenities, housing, transportation services, and well-equipped Farmer Training Centers (FTCs). Furthermore, the results from sub-sample analyses show that female EAs are less responsive to pecuniary incentives and are more concerned with the availability of infrastructure and services. Current salary levels, years of employment, and location of work are also important

sources of heterogeneity in the response of EAs to potential policy changes.

*NETWORKING 2002: Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications* Enrico Gregori, Marco Conti, Andrew T. Cambell, Guy Omidyar, Moshe Zukerman, 2007-06-30 This book constitutes the refereed proceedings of the Second IFIP-TC6 Networking Conference, Networking 2002. Networking 2002 was sponsored by the IFIP Working Groups 6.2, 6.3, and 6.8. For this reason the conference was structured into three tracks: i) Networking Technologies, Services, and Protocols, ii) Performance of Computer and Communication Networks, and iii) Mobile and Wireless Communications. This year the conference received 314 submissions coming from 42 countries from all five continents Africa (4), Asia (84), America (63), Europe (158), and Oceania (5). This represents a 50% increase in submissions over the first conference, thus indicating that Networking is becoming a reference conference for worldwide researchers in the networking community. With so many papers to choose from, the job of the Technical Program Committee, to provide a conference program of the highest technical excellence, was both challenging and time consuming. From the 314 submissions, we finally selected 82 full papers for presentation during the conference technical sessions. To give young researchers and researchers from emerging countries the opportunity to present their work and to receive useful feedback from participants, we decided to include two poster sessions during the technical program.

Thirty-one short papers were selected for presentation during the poster sessions. The conference technical program was split into three days, and included, in addition to the 82 refereed contributions, 5 invited papers from top-level researchers in the networking community.
