Configuring Microsoft Outlook 2003 Sue Mosher, Robert Sparnaaij, Charlie Pulfer, David Hooker, 2005-09-23 One of the challenges of administering and supporting Microsoft® Outlook 2003 is that it stores settings in so many different places - in the Windows registry, as files in the user's profile folders, and in the information store itself. Configuring Microsoft® Outlook 2003 pulls together in one volume the information that administrators in organizations of all sizes need to understand, deploy, and manage settings for Microsoft Outlook 2003. It covers configuration issues for environments where Microsoft Exchange is the mail server and also for those using IMAP4 or POP3. The book gives special attention to security issues, including recommended configuration of Outlook's built-in security features and methods for locking down Outlook with Group Policy Objects and other techniques. Configure the new Cached Exchange mode and RPC over HTTP connections in Outlook 2003 Discover undocumented settings for Microsoft Exchange Server and use them to deploy or modify Outlook mail profiles Migrate both user data and settings to a new machine Use tools such as MFCMAPI and Outlook Spy to explore Outlook's data and settings Configure an archive .pst file in the new Unicode format that supports up to 20GB of data Use scripts to handle challenging configuration tasks such as granting Reviewer access to a Calendar folder, or adding a second Exchange mailbox to an Outlook profile

Flying beyond the stall Douglas A. Joyce, 2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. *Flying Beyond the Stall* begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.
