Genes, Memes, Culture, and Mental Illness Hoyle Leigh, 2010-06-14 What produces mental illness: genes, environment, both, neither? The answer can be found in memes—replicable units of information linking genes and environment in the memory and in culture—whose effects on individual brain development can be benign or toxic. This book reconceptualizes mental disorders as products of stressful gene-meme interactions and introduces a biopsychosocial template for meme-based diagnosis and treatment. A range of therapeutic modalities, both broad-spectrum (meditation) and specific (cognitive-behavioral), for countering negative memes and their replication are considered, as are possibilities for memetic prevention strategies. In this book, the author outlines the roles of genes and memes in the evolution of the human brain; elucidates the creation, storage, and evolution of memes within individual brains; examines culture as a carrier and supplier of memes to the individual; provides examples of gene-meme interactions that can result in anxiety, depression, and other disorders; proposes a multi-axial gene-meme model for diagnosing mental illness; identifies areas of meme-based prevention for at-risk children; and defines specific syndromes in terms of memetic symptoms, genetic/ memetic development, and meme-based treatment.

Beowulf Bryher,2020-10-14 The author of Roman Wall and other well received historical novels portrays here a more recent period of history, that of the Blitz in the London of World War II. Her portrayal of the living out of wartime days with their drabness and danger consists of cannily arranged sketches of over a dozen folk whose lives touch upon or center about the homely, comforting teashop run by two elderly ladies and fittingly named the Warming Pan. Selina Tippet is the motherly figure who presides and succors, Angelina is her militant partner who goes to battle for food rations and who brings home the plaster bulldog Beowulf as symbol of resolution. When the Warming Pan is blasted to nothingness, Beowulf remains unscathed -- and, while Angelina rejoices and thinks of hawking cakes, Selina laughs and weeps over the fact that she will never have to worry about overdue rent again and is embarrassed by the solicitude of her friends. There is an immediacy and a sharp etching in the presentation of people who seem to be caught candid and unaware by

the author: the lonely widowed septuagenarian painter who hangs out at the teashop and who is mercifully spared complete poverty by the blast; young Eve, who has found freedom in the city and who worries that her friend Joe feels alive only in war; Ruby the waitress who discovers a friend she has come to mourn, alive beside her ruined dwelling; the retired colonel whom no one will put back in 'harness' ... A small, distinctively cut and polished piece.--Kirkus reviews

Advanced Sensors for Real-Time Monitoring Applications Olga Korostynska,Alex Mason,2021-03-09 It is impossible to imagine the modern world without sensors, or without real-time information about almost everything—from local temperature to material composition and health parameters. We sense, measure, and process data and act accordingly all the time. In fact, real-time monitoring and information is key to a successful business, an assistant in life-saving decisions that healthcare professionals make, and a tool in research that could revolutionize the future. To ensure that sensors address the rapidly developing needs of various areas of our lives and activities, scientists, researchers, manufacturers, and end-users have established an efficient dialogue so that the newest technological achievements in all aspects of real-time sensing can be implemented for the benefit of the wider community. This book documents some of the results of such a dialogue and reports on advances in sensors and sensor systems for existing and emerging real-time monitoring applications.

Autonomous Driving Markus Maurer,J. Christian Gerdes,Barbara Lenz,Hermann Winner,2016-05-21 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current

transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of “autonomous driving.

Polymeric Gene Delivery Systems Yiyun Cheng, 2018-09-04 The series Topics in Current Chemistry Collections presents critical reviews from the journal Topics in Current Chemistry organized in topical volumes. The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology, medicine and materials science. The goal of each thematic volume is to give the non-specialist reader, whether in academia or industry, a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience. Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed. The coverage is not intended to be an exhaustive summary of the field or include large quantities of data, but should rather be conceptual, concentrating on the methodological thinking that will allow the non-specialist reader to understand the information presented. Contributions also offer an outlook on potential future developments in the field. The chapter Polymeric Nanoparticle-Mediated Gene Delivery for Lung Cancer Treatment is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.
