Supply Chain Management and Advanced Planning Hartmut Stadtler, Christoph Kilger, 2013-04-17 Supply Chain Management concerns organizational aspects of integrating legally separated firms as well as coordinating materials and information flows within a production-distribution network. The Enterprise Resources Planning (ERP) systems being used for transaction handling and order execution in most firms today have been supplemented by Advanced Planning Systems (APS) for coordinating flows, exploiting bottlenecks and keeping due dates. This book provides insights regarding the concepts underlying APS. Special emphasis is given to modelling supply chains and implementing APS in industry successfully. Understanding is enhanced through the use of case studies as well as an introduction to the solution algorithms used. The second edition contains a considerable quantity of new material, especially a novel chapter on collaborative planning.

Rethinking Resource Management Richard

Howitt,2002-01-31 This book offers students and practitioners a sophisticated and convincing framework for rethinking the usual approaches to resource management. It uses case studies to argue that professional resource managers do not take responsibility for the social and environmental consequences of their decisions on the often vulnerable indigenous communities they affect. It also discusses the invisibility of indigenous people's values and knowledge within traditional resource management. It offers a new approach to social impact assessment methods which are more participatory and empowering. The book employs a range of case studies from Australia, North America and Norway.

Planning the Development of Builders, Leaders and Managers for 21st-Century Business: Curriculum Review at Columbia Business School N. Capon, 2012-12-06 Business and management education has an important impact on business practice throughout the world. To a very large extent, possession of the MBA degree is a passport into the upper reaches of management, and CEOs of many major corporations have earned an MBA. It is a reasonable inference that the education received by these leaders and managers during their MBA experience has

an important impact on the way that businesses throughout the world are led and managed and that major corporate decisions are made. The heart of the MBA education is the curriculum, and curriculum design is perhaps the most important strategic function for a business school faculty to undertake. In order to understand the many issues concerning this contemporary curriculum review, this book examines three related contextual domains. First, it details the long-term growth of business and management education. Second, it examines the major theoretical and empirical literatures on organizational evolution and decision making, paying special attention to decision making in institutions of higher education. Finally, the book describes the previous major curriculum review at Columbia Business School in the late 1950s and the subsequent changes that formed the curriculum that was changed in 1992. This book demonstrates what can be achieved by an institution that sets high standards for its business education, and assists faculty and administrators in other schools of business and management as they contemplate revision of their curricula. In addition, it provides a prime example of curriculum design effort in one of the leading institutions worldwide. Finally, it will be of interest to scholars in several different fields, notably, higher education curriculum review, organizational decision making and long-run organizational evolution.
