Governing Digitally Integrated Genetic Resources, Data, and Literature Jerome H. Reichman,Paul F. Uhlir,Tom Dedeurwaerdere,2016-05-19 The free exchange of microbial genetic information is an established public good, facilitating research on medicines, agriculture, and climate change. However, over the past quarter-century, access to genetic resources has been hindered by intellectual property claims from developed countries under the World Trade Organization's TRIPS Agreement (1994) and by claims of sovereign rights from developing countries under the Convention on Biological Diversity (CBD) (1992). In this volume, the authors examine the scientific community's responses to these obstacles and advise policymakers on how to harness provisions of the Nagoya Protocol (2010) that allow multilateral measures to support research. By pooling microbial materials, data, and literature in a carefully designed transnational e-infrastructure, the scientific community can facilitate access to essential research assets while simultaneously reinforcing the open access movement. The original empirical surveys of responses to the CBD included here provide a valuable addition to the literature on governing scientific knowledge commons.

Manufacturing Databases and Computer Integrated Systems Dimitris N. Chorafas,1993-07-23 Manufacturing Databases and Computer Integrated Systems is the first book to probe the problems and solutions presented by the diversity of databases within the manufacturing industry. The author examines these heterogeneous databases at both the macro (national/international) level and micro (intracompany and intercompany) level. This book is the result of an extensive international research project that involved 87 leading organizations. Manufacturing Databases and Computer Integrated Systems presents the compelling argument for using computers as database integrators, a concept beyond the obvious applications of number crunching and data storage. The book addresses several different areas of manufacturing technology, including product policies in manufacturing, fuzzy controls in plant operations, concurrent engineering, practical applications for expert systems, organizational prerequisites in manufacturing, heterogenous database environments, the benefits of object-oriented databases, and the requirements for virtual database integration. Manufacturing Databases and Computer Integrated Systems also presents case studies, including the TRW solution applied in Operation Desert Storm, Project CRONUS by BBN, the Intelligent Database Assistant (IDA) by GTE, General Motor's DATAPLEX solution, and Project Carnot by the Microelectronics and Computer Development Corporation (MCC). The book is a must for computer and database technologists, engineers, and senior management at most companies worldwide.

Mineral Physics—In Memory of Orson Anderson Robert Cooper Liebermann,2020-12-29 This Special Issue contains original scientific papers in the field of mineral physics (and also rock physics). These papers are grouped into four categories: Reviews, Experimental Science, Theoretical Science and Technological Developments. These papers include those from first authors covering 5 generations of mineral physicists, including contemporaries of Orson [e.g., William Bassett, Frank Stacey], the next generation of leaders in mineral physics throughout the world [e.g., Michael Brown, Eiji Ohtani], current leaders in this field [e.g., Agnes Dewaele, Jun Tsuchiya], senior graduate students [e.g., Jan Borgomano, Vasilije Dobrosavljevic, Francesca Miozzi], and an undergraduate student [e.g., Tyler Perez]. Mineral physics is the study of mineralogical problems through the application of condensed matter physics. In reality, mineral physicists use not only physics, but also solid-state chemistry; they study not only minerals, but all materials related to natural minerals (e.g., structural analogs, but also glasses, melts and fluids). Mineral and rock physics is intimately connected to many other geoscience disciplines including seismology, planetary science, petrology, geochemistry, geomagnetism, and geodynamics, and even materials and climate science. This book is dedicated to Orson Anderson who died in June 2019 at the age of 94.

GIS Applications for Water, Wastewater, and Stormwater Systems U.M. Shamsi,2005-01-27 Professionals involved in the planning, design, operation, and construction of water, wastewater, and stormwater systems need to understand the productivity-enhancing applications of GIS. Inspired by an ASCE-sponsored continuing education course taught by the author, GIS Applications for Water, Wastewater, and Stormwater Systems focuses on the practical aspects of software and data tools that enable GIS applications. The book documents and analyzes effective use of GIS, demonstrating how you can apply the technology to make tasks easier to perform, saving time and money for your organization. The book first describes GIS, detailing its importance and explaining how to avoid potential pitfalls via a needs analysis study. It then describes GIS-related technologies that are crucial in applications development: remote sensing; DEM data; GPS; Internet applications; and mobile GIS. The final ten chapters focus on the Four Ms of the water industry–Mapping, Monitoring, Modeling, and Maintenance–applications that define the most important activities for efficient management of water, wastewater, and stormwater systems. Promoting a performance- (or outcome-) based style of learning, each chapter first states learning objectives and later concludes with a chapter summary and questions. The text encourages more effective and natural inductive study by first presenting case studies, then explaining procedures. This volume supplements the text with numerous maps, tables, and illustrations.
