System z Mean Time to Recovery Best Practices Frank

Kyne,Judi Bank,David Sanders,Mark Todd,David Viguers,Cheryl Watson,Shulian Yang,IBM Redbooks,2010-03-22 This IBM® Redbooks® publication provides advice and guidance for IBM z/OS® Version 1, Release 10 and subsystem system programmers. z/OS is an IBM flagship operating system for enterprise class applications, particularly those with high availability requirements. But, as with every operating system, z/OS requires planned IPLs from time to time. This book also provides you with easily accessible and usable information about ways to improve your mean time to recovery (MTTR) by helping you achieve the following objectives: - Minimize the application down time that might be associated with planned system outages. - Identify the most effective way to reduce MTTR for any time that you have a system IPL. - Identify factors that are under your control and that can make a worthwhile difference to the startup or shutdown time of your systems.

Numerical Mathematics Alfio Quarteroni,Riccardo

Sacco,Fausto Saleri,2017-01-26 The purpose of this book is to provide the mathematical foundations of numerical methods, to

analyze their basic theoretical properties and to demonstrate their performances on examples and counterexamples. Within any specific class of problems, the most appropriate scientific computing algorithms are reviewed, their theoretical analyses are carried out and the expected results are verified using the MATLAB software environment. Each chapter contains examples, exercises and applications of the theory discussed to the solution of real-life problems. While addressed to senior undergraduates and graduates in engineering, mathematics, physics and computer sciences, this text is also valuable for researchers and users of scientific computing in a large variety of professional fields.

Social Psychology and Discourse Andrew McKinlay, Chris McVittie, 2009-01-26 A unique and creative textbook that introduces the 'discursive turn' to a new generation of students, *Social Psychology and Discourse* summarizes and evaluates the current state-of-the-art in social psychology. Using the explanatory framework found in typical texts, it provides unparalleled coverage on Discourse Analytic Psychology in a format that is immediately familiar to undergraduate readers. A timely overview of the breadth and depth of discourse research, ideal for undergraduates and also a great resource for postgraduate research students embarking on

a discursive project No other text offers the same range of coverage - from the core topics of social cognition, attitudes, prejudice and relationships to lesser known areas such as small group phenomena Includes a host of student-friendly features such as chapter outlines, key terms, a glossary, activity questions, classic studies and further reading

Developments in Telecommunications Gerhard

Rufa, 2009-03-31 In this book we summarize important developments in telecommunications with a focus on Signalling System No. 7 (SS 7) network reliability. But why is SS 7 network security and reliability so important? According to the Open Systems Interconnection (OSI) model the term “network” refers to the Layer 3 network service, which is offered by the Message Transfer Part (MTP) and Signalling Connection Control Part (SCCP) to higher layers. An SS 7 network outage results in a breakdown of signalling between the individual nodes of the network, so that telecommunication network services are no longer available to customers. Apart from the tremendous financial damage to the network operator, the social consequences of such a network breakdown cannot be underestimated. Since the MTP is the central part of the SS 7 network, it is of crucial importance for

network security and reliability. The MTP is published in different versions and should now be what we call “stable”. Is it really stable? Does it work properly in real networks? Does it t new requirements so that no further changes within the MTP are needed? Various different implementations have existed for a long time and are used in national as well as the international network. Due to this, an objective is not to p- form any further changes within the MTP in order to avoid compatibility problems with existing and running systems. Experience shows that compatibility problems are always related to further development of the MTP.

Troubleshooting Cisco IP Telephony Paul Giralt,Addis Hallmark,Anne Smith,2002 In The Implosion of Capitalism world-renowned political economist Samir Amin connects the key events of our times - financial crisis, Eurozone implosion, the emerging BRIC nations and the rise of political Islam - identifying them as symptoms of a profound systemic crisis.In light of these major crises and tensions, Amin updates and modifies the classical definitions of social classes, political parties, social movements and ideology. In doing so he exposes the reality of monopoly capitalism in its contemporary global form.In a bravura conclusion, Amin argues that the current capitalist system is not viable and that

implosion is unavoidable. The Implosion of Capitalism makes clear the stark choices facing humanity - and the urgent need for a more humane global order.

Opening the Gates Donald Reid, 2018-06-12 How the occupation of a watch factory became one of the iconic labor struggles after May 1968 In 1973, faced with massive layoffs, workers at the legendary Lip watch firm in Besançon, France, occupied their factory to demand that no one lose their job. They seized watches and watch parts, assembled and sold watches, and paid their own salaries. Their actions recaptured the ideals of May 1968, when 11 million workers had gone on strike to demand greater autonomy and to overturn the status quo. Educated by '68, the men and women at the Besançon factory formed committees to control every aspect of what became a national struggle. Female employees developed a working-class feminism, combating workplace sexual harassment and male control of the union. The endurance of the Lip movement and its appeal through the 1970s came from its rich democratic, participatory culture. The factory workers welcomed supporters and engaged with them, an expression of solidarity between blue-collar and student activists that built on the legacy of 1968. **Opening the Gates: The Lip Affair,**

1968–1981 is the first account of all facets of the experience, drawing extensively on unpublished materials to reconstruct the vision and practice of those involved. The Lip workers' struggle was the last widespread expression in France of the belief that creativity and moral autonomy are the driving force of social transformation. It brought about what Sartre called “the extension of the field of possibilities”—not just for workers, but for all those who gave the movement support and meaning.

Restart Strategies Jan-Hendrik Lorenz,2021-10-12 Restarting is a technique employed by many algorithms. For some problems, restarts improve the runtimes by orders of magnitude. This thesis considers several aspects of restarts. In addition to complexity-theoretical properties, we also study methods for constructing optimal restart strategies. On the practical side, we apply restarts to significantly improve the performance of a SAT solver.

Restarting the Future Jonathan Haskel,Stian

Westlake,2023-10-03 From the acclaimed authors of Capitalism without Capital, radical ideas for restoring prosperity in today's intangible economy The past two decades have witnessed sluggish economic growth, mounting inequality, dysfunctional competition, and a host of other ills that have left people wondering what has happened to the future they were promised. Restarting the Future reveals how these problems arise from a failure to develop the institutions demanded by an economy now reliant on intangible capital such as ideas, relationships, brands, and knowledge. In this groundbreaking and provocative book, Jonathan Haskel and Stian Westlake argue that the great economic disappointment of the century is the result of an incomplete transition from an economy based on physical capital, and show how the vital institutions that underpin our economy remain geared to an outmoded way of doing

business. The growth of intangible investment has slowed significantly in recent years, making the world poorer, less fair, and more vulnerable to existential threats. Haskel and Westlake present exciting new ideas to help us catch up with the intangible revolution, offering a road map for how to finance businesses, improve our cities, fund more science and research, reform monetary policy, and reshape intellectual property rules for the better. Drawing on Haskel and Westlake's experience at the forefront of finance and economic policymaking, *Restarting the Future* sets out a host of radical but practical solutions that can lead us into the future.
