Criminals James O'Loughlin, 2022-07-05 'It's not what we've lost. It's what we have left.' What do you do when everything spins out of control? Dean, a small-time thief funding a drug habit, needs to up the ante, so he stages an armed robbery at the local leagues club-but not everything goes to plan. Sarah, a junior cop on extended stress leave is working the bar when the masked men come storming in. Mary, former schoolteacher now solo alcoholic, having lost all hope in life, refuses the intruders' demands. Now irreversibly linked to the other two, each must decide who to betray, who to trust and who to protect. What they choose to do-and what they choose to believe in-will change the course of all of their lives. Ultimately, to have a fighting chance at survival-let alone a shot at redemption-each will have to risk the thing that is most important to them. James O'Loughlin's insight and humour pervade this novel and these characters: their doubts and fears, their mistakes and their struggle to navigate the complexities of life. But at its heart, *Criminals* asks what it means to transgress. What makes a criminal? Are justice and punishment matters for the police and the courts alone, or for the human soul? Are there really good guys and bad guys-or are we all a bit of both?

Mobile Security Products for Android Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013, more than 1 billion smartphones were sold, a further milestone in the advance of these devices¹. A study published by Facebook emphasises the importance of smartphones in our lives; about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time, the traditional function of a telephone is

becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos, users trust their devices with their most personal communications, such as Facebook, WhatsApp and email. This brings some risks with it, as such usage makes the smartphone interesting for criminals, who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days, the use of security software on a PC or laptop is seen as essential. However, many smartphone users do not yet have the same sense of responsibility, even though their devices store personal data, private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy, they are also an attractive target for thieves. Top-quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen, they must be made less attractive to thieves. Consequently, many of today's security products contain not only malware protection, but also highly developed theft-protection functions, which make the device less attractive to thieves (e.g. by locking the device), and help the owner to find it again.

this project we are
going to design a simple
metal detector circuit
there are so many metal
detector designs but
most of them are complex
in design so here we are
going to design a simple
metal detector circuit
using 555 timer ic
before going further we
need to understand
concept of inductor and
rlc circuits let us
first talk about
inductors
