Megaproject Management Edoardo Favari,Franca Cantoni,2020-05-20 The book investigates the various aspects characterizing Megaprojects from numerous perspectives and by integrating different disciplines: engineering, economics, business organization, human resource management, law, etc. It represents the first output of MeRIT (the Megaproject Research Interdisciplinary Team), and focuses on the intrinsic and unavoidable complexity of Megaprojects. The chapters have intentionally not been standardized, and humanistic topics are not separated from technical ones: this way of reading and interpreting Megaprojects through the cross-pollination of various disciplines reflects the MeRIT approach. Addressing the complexity involved in Megaprojects requires the use of a hermeneutic circle of sorts: understanding the project as a whole is achieved by referring to the specific parts, while each part can only be understood in relation to the whole. This circular approach appears to be the only one applicable to Megaprojects: no final destination, no final synthesis can be achieved. This volume consists of eight chapters written by researchers in law, economics, sociology, business organization, engineering, architecture and landscaping. The topics covered will be relevant to researchers, practitioners involved in the development of Megaprojects, and policymakers at the EU level.

Post-Politics and Civil Society in Asian Cities Sonia Lam-Knott,Creighton Connolly,Kong Chong Ho,2019-10-23 Bringing together an interdisciplinary group of scholars, Post-Politics and Civil Society in Asian Cities examines how the concept of 'post-politics' has manifested across a

range of Asian cities, and the impact this has had on state-society relationships in processes of urban governance. This volume examines how the post-political framework—derived from the study of Western liberal democracies—applies to Asian cities. Appreciating that the region has undergone a distinctive trajectory of political development, and is currently governed under democratic or authoritarian regimes, the book articulates how post-political conditions have created obstacles or opportunities for civil society to assert its voice in urban governance. Chapters address the different ways in which Asian civil society groups strive to gain a stake in the development and management of cities, specifically by looking at their involvement in heritage and environmental governance, two inter-related components in discourses about establishing liveable cities for the future. By providing in-depth case studies examining the varying degrees to which post-political ideologies have been enacted in urban governance across Central, South, Southeast, and East Asia, this book offers a useful and timely resource for students and scholars interested in urban studies, political science, Asian studies, geography, and sociology.

Evidence-based Management of Stroke José Biller, José M Ferro, 2011-06-01 Winner of a HIGHLY COMMENDED AWARD in the Neurology category of the 2012 BMA Medical Book Competition. More than five million people die from stroke each year. Stroke is also the leading cause of adult disability, affecting over 20 million people worldwide, with two-thirds of stroke victims left permanently disabled. We now know that speed of intervention is critical and patient outcomes are determined by a very narrow therapeutic window, during which physicians need to be able to make their choice of treatment rapidly, based on the best evidence available. The purpose of this book is to review that evidence, for both medical and surgical therapies as well as preventative strategies, drawing on the expertise of leading international authorities to distinguish the issues for which there is a consensus on best practice from those for which the evidence remains inconclusive. For example, for patients with acute ischemic stroke the first choice is intravenous thrombolytic therapy, but does a treatment window of 0-3 hours deliver outcomes significantly better than one of 3-4.5 hours? Arterial hypertension is the single most important modifiable risk factor for ischemic stroke, but what are the effects of blood pressure reduction among acute stroke patients? How effective is blood pressure lowering in primary intracerebral hemorrhage? What are the arguments in favour of continuation versus temporary discontinuation of antihypertensive therapy immediately after acute ischemic stroke? Endovascular procedures (carotid angioplasty/stenting) are increasingly important but what do the data tell us about their safety? Or durability? How do they compare with carotid endarterectomy? The management of unruptured intracranial aneurysms is rife with controversies; clip, coil, wait and watch? The authors examine the

evidence for and against. Other sections examine the impact of various risk factors, and special populations. A section on stroke after cardiovascular surgeries reviews the incidence and management of stroke following a whole range of procedures. Another examines special risks during pregnancy. Lastly, the book reviews our understanding of childhood stroke and presents current best practice recommendations for this most challenging group of patients.

Managing Public Sector Projects David S. Kassel,2016-09-13 Filling a gap in project management literature, this book supplies managers and administrators—at all levels of government—with expert guidance on all aspects of public sector project management. From properly allocating risks in drafting contracts to dealing with downsized staffs and privatized services, this book clearly explains the technical concepts and the political issues public managers need to understand. In line with the principles of Total Quality Management (TQM) and the PMBOK® Guide, David S. Kassel establishes a framework those in the public sector may follow to ensure the success of their public projects and programs. The book supplies more than 30 real-life examples to illustrate the concepts behind the framework—including reconstruction projects in Iraq, the Big Dig project in Boston, local sewer system and library construction projects, and software technology. This second edition includes all-new extended case studies examining recent issues including the rollout of healthcare.gov, the controversial California High Speed Rail system, and refurbishing the Harvard Town Hall. Contributing to critical discussions on budgeting for capital projects and cost-benefit analysis for preliminary planning, this authoritative new edition provides strategic recommendations for effective planning, execution, and maintenance of public projects. In an age of downsized government and in the face of a general distrust of public service, this book is a dependable guide for avoiding common pitfalls and for delivering projects on cost, on schedule, and of the highest quality.

Megacities Andre Sorensen,Junichiro Okata,2010-11-18 For the first time in human history, more than half the world's population is urban. A fundamental aspect of this transformation has been the emergence of giant cities, or megacities, that present major new challenges. This book examines how issues of megacity development, urban form, sustainability, and unsustainability are conceived, how governance processes are influenced by these ideas, and how these processes have in turn influenced outcomes on the ground, in some cases in transformative ways. Through 15 in-depth case studies by prominent researchers from around the world, this book examines the major challenges facing megacities today. The studies are organized around a shared set of concerns and questions about issues of sustainability, land development, urban governance, and urban form. Some of the main questions addressed are: What are the most pressing issues of sustainability and urban form in each megacity? How are major issues of sustainability understood and framed by policymakers? Is urban form considered a significant component of sustainability issues in public debates and public policy? Who are the key actors framing urban sustainability challenges and shaping urban change? How is unsustainability, risk, or disaster imagined, and how are those concerns reflected in policy approaches? What has been achieved so far, and what challenges remain? The publication of this book is a step toward answering these and other crucial questions.
