*Machine Learning for Ecology and Sustainable Natural Resource Management* Grant Humphries, Dawn R. Magness, Falk Huettmann, 2018-11-05 Ecologists and natural resource managers are charged with making complex management decisions in the face of a

rapidly changing environment resulting from climate change, energy development, urban sprawl, invasive species and globalization. Advances in Geographic Information System (GIS) technology, digitization, online data availability, historic legacy datasets, remote sensors and the ability to collect data on animal movements via satellite and GPS have given rise to large, highly complex datasets. These datasets could be utilized for making critical management decisions, but are often “messy” and difficult to interpret. Basic artificial intelligence algorithms (i.e., machine learning) are powerful tools that are shaping the world and must be taken advantage of in the life sciences. In ecology, machine learning algorithms are critical to helping resource managers synthesize information to better understand complex ecological systems. Machine Learning has a wide variety of powerful applications, with three general uses that are of particular interest to ecologists: (1) data exploration to gain system knowledge and generate new hypotheses, (2) predicting ecological patterns in space and time, and (3) pattern recognition for ecological sampling. Machine learning can be used to make predictive assessments even when relationships between variables are poorly understood. When traditional techniques fail to capture the relationship between variables, effective use of machine learning can unearth and capture previously unattainable insights into an ecosystem's complexity. Currently, many ecologists do not utilize machine learning as a part of the scientific process. This volume highlights how machine learning techniques can complement the traditional methodologies currently applied in this field.

**Economics and Other Disciplines** Ricardo F. Crespo, 2017-05-18

During the second half of the twentieth century, economics exported its logic – utility maximization – to the analysis of several human activities or realities: a tendency that has been called “economic imperialism”. This book explores the concept termed by John Davis as “reverse imperialism”, whereby economics has been seen in recent years to have taken in elements from other disciplines. *Economics and Other Disciplines* sheds light on the current state and possible future development of economics by focusing on it from a philosophical perspective, broadening the concept of rationality in economic theory. The beliefs that prevail in the world today make up a physicalist worldview. This book argues that this pervasive view is harmful for economics as a social science. Do new economic currents like behavioral economics, evolutionary economics, neuroeconomics, institutional economics, happiness economics, the capability approach

and civil economy, escape this widespread mentality? What would be an adequate underlying economic ethos? Do these approaches fit into this ethos? Ricardo F. Crespo appraises the contributions from a classical philosophy angle, emphasizing their implications regarding practical reason. This volume is of great importance to those who are interested in political economy, economic theory and philosophy, as well as philosophy of social science.

*Tactical Decision-Making in Sport* David Cooper,Barrie

Gordon,2020-05-28 This book expands on the 'Developing Thinking Players' model across a wide range of team and individual sports, to explain how coaches can help athletes to learn how to make better decisions during play and to think for themselves. It provides an overview of game-centred and athlete-centred approaches to teaching and coaching in sport, combining essential theory with practical tips and guidance. Written by an international team of coaching researchers and practising coaches, the book provides sport-specific

instructions for coaching players in territory games, net games, striking games, target games, racquet games and combat sports, including netball, basketball, ice hockey, cricket, softball, football, rugby, volleyball, squash and karate. The book argues that the implementation of these student and athlete-centred approaches creates more opportunities for athletes to understand their sport and improves their ability to think for themselves and to learn to make better in-game decisions. Providing a theoretical underpinning for teaching tactical decision-making, it considers the development of players at all levels and age groups, from youth athletes to elite level. Thirteen sport-specific case studies offer real-world coaching insights. This is essential reading for any student, researcher or practising teacher or coach working in sport, physical education and coach education.
