Advances in Lithium-Ion Batteries for Electric Vehicles Haifeng Dai, Jiangong Zhu, 2024-02-26

Advances in Lithium-Ion Batteries for Electric Vehicles: Degradation Mechanism, Health Estimation, and Lifetime Prediction examines the electrochemical nature of lithium-ion batteries, including battery degradation mechanisms and how to manage the battery state of health (SOH) to meet the demand for sustainable development of electric vehicles. With extensive case studies, methods and applications, the book provides practical, step-by-step guidance on battery tests, degradation mechanisms, and modeling and management strategies. The book begins with an overview of Li-ion battery aging and battery aging tests before discussing battery degradation mechanisms and methods for analysis. Further methods are then presented for battery state of health estimation and battery lifetime prediction, providing a range of case studies and techniques. The book concludes with a thorough examination of lifetime management strategies for electric vehicles, making it an essential resource for students, researchers, and engineers needing a range of approaches to tackle battery degradation in electric vehicles. Evaluates the cause of battery degradation from the material level to the cell level Explains key battery basic lifetime test methods and strategies Presents advanced technologies of battery state of health estimation

Coastal Dynamic and Evolution Giorgio Anfuso, Angela Rizzo, 2021-02-05 This book includes papers published in the Special Issue titled “Coastal Dynamic and Evolution”, which aimed to collect multidisciplinary studies that involved the evaluation of coastal evolution at different temporal scales, from hours and days to months and years, as well as historical changes. The volume contains investigations carried out by means of aerial photos and satellite images, as well as results from in situ surveys and observations aimed at assessing morphological changes in shoreline and dune

systems as a consequence of chronic flooding and erosion processes or the occurrence of specific weather-related events. Studies on the evaluation of past and future sea-level variations and related impacts have also been included. In order to provide the reader with a wide overview of different coastal settings and methodological approaches, case studies from Russia, Italy, California (USA), Morocco, Spain, Indonesia, Ireland and Colombia have been included in this Special Issue. The content may be of interest to those who perform a wide range of investigations related to coastal analysis and management, especially to researchers and academics who can exploit the provided approaches and methodologies.

Modeling the Fate of Chemicals in Products Li Li, 2019-10-21 This thesis provides a novel methodological basis for mechanistically understanding the dynamics of chemicals in products (CiPs) in the anthroposphere and physical environment and establishes a modeling continuum from production of a chemical to its concentrations in various environmental compartments. Using this framework, the thesis investigates how CiPs are transported and transformed and how they accumulate in the global environment. Furthermore, it identifies the measures needed to minimize their adverse effects on the environment and human society. It serves as an invaluable, interdisciplinary reference resource for industrial ecologists, environmental chemists and decision-makers involved in environmentally sound management of CiPs and associated waste.

Issues in Land and Water Engineering: 2011 Edition , 2012-01-09 Issues in Land and Water Engineering / 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Land and Water Engineering. The editors have built Issues in Land and Water Engineering: 2011 Edition on the vast information databases of ScholarlyNews.™ You can

expect the information about Land and Water Engineering in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Land and Water Engineering: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Macraes Orogenic Gold Deposit (New Zealand) Dave Craw,Doug MacKenzie,2016-08-10 This book describes the nature and origin of the Macraes gold deposit. It also documents the key features of this spectacular deposit for a wide range of professionals in the resource geology community. This world-class gold deposit has been a spectacular geological and economic success story, as it has developed from a small historical gold mine in discontinuous quartz veins measuring only meters to a large-scale mine in deposits spreading over kilometres in extensive disseminated gold-bearing rock.

Mycobacteria and the Macrophage Suzie Hingley-Wilson,Samantha Leigh Sampson,Sangeeta Tiwari,2023-12-28 The macrophage (or “big eater”) is often considered the first cell type to encounter the causative agent of Tuberculosis (TB), *Mycobacterium tuberculosis*, upon entry to the lung. Once inside the macrophage the tubercle bacillus can survive and even replicate where many other invading pathogens perish. Recent research suggests the bacilli adapts within this hostile environment, treating the macrophage like a Trojan horse. Indeed, cutting-edge techniques have revealed that the degree of bacterial heterogeneity and resistance to antibiotics changes within the macrophage. *M. tuberculosis* spends most of its life cycle within the macrophage and has adopted

specific mechanisms to survive, egress and to recruit more of this niche cell (eg the Type VII secretion system ESX-1). Understanding the host-pathogen interaction in tuberculous infection is key to understanding TB, which remains the number one cause of death from a bacterial infection. In this research topic we aim to cover advances in understanding how the tubercle bacillus adapts and survives within the host cell. Determining the responsible mechanisms may reveal novel ways to target this deadly pathogen and halt its adaptation and transformation within these potentially destructive or permissive cells.

Plantwide Process Control William L. Luyben, Björn D. Tyréus, Michael L. Luyben, 1999 With four realistic case studies ... Tennessee-Eastman, isomerization, vinyl acetate, and HDA processes (the first time a workable control structure for HDA has ever been published) ... Plantwide Process Control gives chemical engineers, and students, the tools they need to design effective control schemes.

A Profile of the World's Young Developing Country Migrants David J. McKenzie, 2006 The paper uses individual level census and household survey data to present a rich profile of the young developing migrants around the world. Youth are found to comprise a large share of all migrants, particularly in migration to other developing countries, with the probability of migration peaking in the late teens or early twenties. The paper examines in detail the age and gender composition of migrants, whether young migrants move alone or with a parent or spouse, their participation in schooling and work in the destination country, the types of jobs they do, and the age of return migration. The results suggest a high degree of commonality in the youth migrant experience across a number of destination countries. In particular, developing country youth tend to work in similar occupations all around the world, and are more concentrated in these occupations than older migrants or native youth. Nevertheless, there is also considerable heterogeneity among youth

migrants: 29 percent of 18 to 24 year olds are attending school in their destination country, but another 29 percent are not working or in school. This illustrates both the potential of migration for building human capital, and the fear that lack of integration prevents it from being used.

Seeing More Samantha Matherne, Gardner Cowles Associate Professor of the Humanities
Samantha Matherne, 2024-07-19 There is a long-standing tradition in philosophy that defines imagination as engaging with things that are not real or present; as a kind of fantasy. Immanuel Kant offered an original theory of imagination as something that shapes our encounters with what is real, present, and pervades our lives. This book brings this theory of imagining to light.

Dark Matter Christie L. Rich, Amber McNemar, 2012-01 Rayla Tate's dreams for the future shattered when she discovered she was an Elemental capable of manipulating matter. Thrust, once again, into the magical fae realm of Faeresia, she has an important choice to make. But now that she has Heath to contend with, deciding between Zach and Luke is the least of her concerns. Tall, dark and lethal to her will, her attraction to Heath eclipses all she has experienced with any other lord, but he is using compulsion to wear her down. If only she could trust her feelings? In a desperate attempt to escape Heath, she accepts the help of a little troll and finally gets what she wants; however, her relief is short lived. Things go terribly wrong when a dark force closes in on her, threatening to steal her burgeoning power before she even has a chance to test her abilities. Now, with Rayla as their captive, the Order will stop at nothing to create a male Elemental, and willing or not, Rayla is the key. Caught up in the age-old battle for dominance between human and fae, only one question matters to

her now-will she be able to save those she loves most without losing herself in the process? Or will she be forever haunted by the choices she alone can make?

The Australian Library Journal ,2002

The Kyrenia Ship Final Excavation Report, Volume I Susan Womer Katzev, Helena Wylde Swiny, 2022-12-01 The Kyrenia Ship, a Greek merchantman built around 315 BC, which sank off the north coast of Cyprus, was excavated between 1968 and 1972 under the direction of Michael L. Katzev of the University of Pennsylvania and Oberlin College. The importance of this ship lies in the exceptionally well-preserved hull that provided new insights into ancient shipbuilding, as well as the cargo it carried. The hold was stacked with transport amphoras of various types made on Rhodes, with a few examples from Samos, Kos, Knidos and Cyprus (?), supplemented by a consignment of millstones, iron billets and almonds. The cabin pottery from Rhodes also suggests this was the vessel's home port, a conclusion supported by most of the scientific ceramic analyses. Its trade route included Rhodes, Cyprus and the Levant with perhaps Egypt as a final destination. This volume provides a detailed history of the excavation followed by definitive studies of the amphora cargo and the pottery associated with shipboard life. Some of the amphora stamps suggest that the ship sank between 294 and 291 BC, dates corroborated by the cabin wares. The repetition of four drinking cups (kantharoi), oil containers (gutti), wine measures (olpai), as well as bowls and saucers, suggests that the ship was sailed by a crew of four. Seven bronze coins were recovered, five minted in the name of Alexander the Great and one well-known type of Ptolemy I produced only on Cyprus.
