Enhancing the Effectiveness of Team Science National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on the Science of Team Science, 2015-07-15 The past half-century has witnessed a dramatic increase in the scale and complexity of scientific research. The growing scale of science has been accompanied by a shift toward collaborative research, referred to as team science. Scientific research is increasingly conducted by small teams and larger groups rather than individual investigators, but the challenges of collaboration can slow these teams' progress in achieving their scientific goals. How does a team-based approach work, and how can universities and research institutions support teams? *Enhancing the Effectiveness of Team Science* synthesizes and integrates the available research to provide guidance on assembling the science team; leadership, education and professional development for science teams and groups. It also examines institutional and organizational structures and policies to support science teams and identifies areas where further research is needed to help science teams and groups achieve their scientific and translational goals. This report offers major public policy recommendations for science research agencies and policymakers, as well as recommendations for individual scientists, disciplinary associations, and research universities. *Enhancing the Effectiveness of Team Science* will be of interest to university research administrators, team science leaders, science faculty, and graduate and postdoctoral students.

Transdisciplinary Higher Education Paul Gibbs, 2017-05-23 This book is not just about thinking or acting in transdisciplinary ways, but about being transdisciplinary. To achieve this requires a deconstruction of our current way of acting within the definition of being that others impose upon us. Transdisciplinarity is a phenomenological perspective of reality and its manifestation in the world in which we exist. The volume develops a widely based transdisciplinary understanding of the issues faced by higher education institutions and those who work within and with these institutions to educate professionals. It incorporates international contributions from organisational theory, anthropologists, historians, psychologists, social sciences, philosophers and practitioners to create a volume that

makes an important and distinct contribution to the literature on higher education and professional practice. “Transdisciplinarity provides one of our greatest challenges in higher education, both to the way it is organized and to the nature of the curriculum. This book is an important contribution to the debate about its implications.” “Higher education is being challenged by the nature of knowledge and how it is organized—the world is transdisciplinary but our institutions are constrained by the disciplines. This book contributes to the important debates about the challenges transdisciplinarity provides to our institutions.” Professor David Boud Emeritus Professor, Faculty of Arts and Social Sciences, University of Technology, Sydney

The Cambridge Companion to the Age of Augustus Karl Galinsky, 2005-09-12 The age of Augustus, commonly dated to 30 BC – AD 14, was a pivotal period in world history. A time of tremendous change in Rome, Italy, and throughout the Mediterranean world, many developments were underway when Augustus took charge and a recurring theme is the role that he played in shaping their direction. The Cambridge Companion to the Age of Augustus captures the dynamics and richness of this era by examining important aspects of political and social history, religion, literature, and art and architecture. The sixteen essays, written by distinguished specialists from the United States and Europe, explore the multi-faceted character of the period and the interconnections between social, religious, political, literary, and artistic developments. Introducing the reader to many of the central issues of the Age of Augustus, the essays also break new ground and will stimulate further research and discussion.

Computational Chemogenomics Edgar Jacoby, 2013-12-03 This book focuses on applications of

compound library design and virtual screening to expand the bioactive chemical space, to target hopping of chemotypes to identify synergies within related drug discovery projects or to repurpose known drugs, to propose mechanism of action of compounds, or to identify off-target effects by cross-reactivity analysis. Both ligand-based and structure-based in silico approaches, as reviewed in this book, play important roles for all these applications. Computational chemogenomics is expected to increase the quality and productivity of drug discovery and lead to the discovery of new medicines.

How Schools Work Rebecca Barr,Robert Dreeben,Nonglak Wiratchai,1983 As budgets tighten for school districts, a sound understanding of just how teaching and administration translate into student learning becomes increasingly important. Rebecca Barr, a researcher of classroom instruction and reading skill development, and Robert Dreeben, a sociologist of education who analyzes the structure of organizations, combine their expertise to explore the social organization of schools and classrooms, the division of labor, and the allocation of key resources. Viewing schools as part of a social organization with a hierarchy of levels—district, school, classroom, instructional group, and students—avoids the common pitfalls of lumping together any and all possible influences on student learning without regard to the actual processes of the classroom. Barr and Dreeben systematically explain how instructional groups originate, form, and change over time. Focusing on first grade reading instruction, their study shows that individual reading aptitude actually has little direct relation to group reading achievement and virtually none to the coverage of reading materials once the mean aptitude of groups is taken into consideration. Individual aptitude, they argue, is rather the basis on which teachers form reading groups that are given different instructional treatment. It is these differences in group treatment, they contend, that explain substantial differences in learning curricular material.
