Digital Methods in the Humanities Silke Schwandt,2020-12-31 Digital Humanities is a transformational endeavor that not only changes the perception, storage, and interpretation of information but also of research processes and questions. It also prompts new ways of interdisciplinary communication between humanities scholars and computer scientists. This volume offers a unique perspective on digital methods for and in the humanities. It comprises case studies from various fields to illustrate the challenge of matching existing textual research practices and digital tools. Problems and solutions with and for training tools as well as the adjustment of research practices are presented and discussed with an interdisciplinary focus.

Forest Ecology and Conservation Adrian Newton,School of Conservation Sciences Adrian Newton,2007-05-17 Forests have become the focus of intense conservation interest over the past two decades, reflecting widespread concern about high rates of deforestation and forest degradation, particularly in tropical countries. The aim of this book is to outline the main methods and techniques available to forest ecologists.

Digital Humanities in Practice Claire Warwick,Melissa Terras,Julianne Nyhan,2012-10-09 This cutting-edge and comprehensive introduction to digital humanities explains the scope of the discipline and state of the art and provides a wide-ranging insight into emerging topics and avenues of research. Each chapter interweaves the expert commentary of leading academics with analysis of current research and practice, exploring the possibilities and challenges that occur when culture and digital technologies intersect. International case studies of projects ranging from crowdsourced manuscript transcription to computational reconstruction of frescoes are included in each chapter, providing a wealth of information and inspiration. QR codes within each chapter link to a dedicated website where additional content, such as further case studies, is located. Key topics covered include: • studying users and readers • social media and crowdsourcing • digitization and digital resources • image processing in the digital humanities • 3D recording and museums • electronic text and text encoding • book history, texts and digital editing • open access and online teaching of digital humanities • institutional models for digital humanities. Readership: This is an essential practical guide for academics, researchers, librarians and professionals involved in the digital humanities. It will also be core reading for all humanities students and those taking courses in the digital humanities in particular.

Open Access and the Humanities Martin Paul Eve,2014-11-27 If you work in a university, you are almost certain to have heard the term 'open access' in the past couple of years. You may also have heard either that it is the utopian answer to all the problems of research dissemination or perhaps that it marks the beginning of an apocalyptic new era of 'pay-to-say' publishing. In this book, Martin Paul Eve sets out the histories, contexts and controversies for open access, specifically in the humanities. Broaching practical elements alongside economic histories, open licensing, monographs and funder policies, this book is a must-read for both those new to ideas about open-access scholarly communications and those with an already keen interest in the latest developments for the humanities. This title is also available as Open Access via Cambridge Books Online.

Pastplay Kevin Kee,2014-03-10 In the field of history, the Web and other technologies have become important tools in research and teaching of the past. Yet the use of these tools is limited—many historians and history educators have resisted adopting them because they fail to see how digital tools supplement and even improve upon conventional tools (such as books). In Pastplay, a collection of essays by leading history and humanities researchers and teachers, editor Kevin Kee works to address these concerns head-on. How should we use technology? Playfully, Kee contends. Why? Because doing so helps us think about the past in new ways; through the act of creating technologies, our understanding of the past is re-imagined and developed. From the insights of numerous scholars and teachers, Pastplay argues that we should play with technology in history because doing so enables us to see the past in new ways by helping us understand how history is created; honoring the roots of research, teaching, and technology development; requiring us to model our thoughts; and then allowing us to build our own understanding.

Chemical applications of spectroscopy ,

Practices of Comparing Angelika Eppe,Walter Erhart,Johannes Grave,2020-06 Practices of comparing shape how we perceive, organize, and change the world. This volume outlines the program of a new research agenda that places comparative practices at the center of an interdisciplinary exploration.

Defining Digital Humanities Melissa Terras,Julianne Nyhan,Edward Vanhoutte,2016-05-13 Digital Humanities is becoming an increasingly popular focus of academic endeavour. There are now hundreds of Digital Humanities centres worldwide and the subject is taught at both postgraduate and undergraduate level. Yet the term 'Digital Humanities' is much debated. This reader brings together, for the first time, in one core volume the essential readings that have emerged in Digital Humanities. We provide a historical overview of how the term 'Humanities Computing' developed into the term 'Digital Humanities', and highlight core readings which explore the meaning, scope, and implementation of the field. To contextualize and frame each included reading, the editors and authors provide a commentary on the original piece. There is also an annotated bibliography of other material not included in the text to provide an essential list of reading in the discipline. This text will be required reading for scholars and students who want to discover the history of Digital Humanities through its core writings, and for those who wish to understand the many possibilities that exist when trying to define Digital Humanities.

Clio Wired Roy Rosenzweig,2011-01-05 In these visionary essays, Roy Rosenzweig charts the impact of new media on teaching, researching, preserving, presenting, and understanding history. Negotiating between the cyberenthusiasts who champion technological breakthroughs and the digitalskeptics who fear the end of traditional humanistic scholarship, Rosenzweig re-envisions academic historians' practices and professional rites while analyzing and advocating for amateur historians' achievements. While he addresses the perils of doing history online, Rosenzweig eloquently identifies the promises of digital work, detailing innovative strategies for powerful searches in primary and secondary sources, the increased opportunities for dialogue and debate, and, most of all, the unprecedented access afforded by the Internet. Rosenzweig draws attention to the opening up of the historical record to new voices, the availability of documents and narratives to new audiences, and the attractions of digital technologies for new and diverse practitioners. Though he celebrates digital history's democratizing influences, Rosenzweig also argues that we can only ensure the future of the past in this digital age by actively resisting the efforts of corporations to put up gates and profit from the Web.

Corpus, Concordance, Collocation John Sinclair,1991 John Sinclair charts the emergence of a new view of language and the computer technology associated with it. Developments in computational linguistics over the past ten years are outlined. There is discussion of corpus creation and exemplification of corpus use. The book goes on to spell out the implications of these developments for an understanding of collocation.

The Digital Humanist Domenico Fiormonte,Teresa Numerico,Francesca Tomasi,2015 This book offers a critical introduction to the core technologies underlying the Internet from a humanistic perspective. It provides a cultural critique of computing technologies, by exploring the history of computing and examining issues related to writing, representing, archiving and searching. The book raises awareness of, and calls for, the digital humanities to address the challenges posed by the linguistic and cultural divides in computing, the clash between communication and control, and the biases inherent in networked technologies. A common problem with publications in the Digital Humanities is the dominance of the Anglo-American perspective. While seeking to take a broader view, the book attempts to show how cultural bias can become an obstacle to innovation both in the methodology and practice of the Digital Humanities. Its central point is that no technological instrument is culturally unbiased, and that all too often the geography that underlies technology coincides with the social and economic interests of its producers. The alternative proposed in the book is one of a world in which variation, contamination and decentralization are essential instruments for the production and transmission of digital knowledge. It is thus necessary not only to have spaces where DH scholars can interact (such as international conferences, THATCamps, forums and mailing lists), but also a genuine sharing of technological know-how and experience. This is a truly exceptional work on the subject of the digital....Students and scholars new to the field of digital humanities will find in this book a gentle introduction to the field, which I cannot but think would be good and perhaps even inspirational for them....Its history of the development of machines and programs and communities bent on using computers to advance science and research merely sets the stage for an insightful analysis of the role of the digital in the way both scholars and everyday people communicate and conceive of themselves and others in written forms - from treatises to credit card transactions. Peter Shillingsburg The Digital Humanist is not simply a

translation of the Italian book L'umanista digitale (il Mulino 2010), but a new version tailored to an international audience through the improvement and expansion of the sections on social, cultural and ethical problems of the most widely used methodologies, resources and applications. TABLE OF CONTENTS // Preface: Digital Humanities at a Political Turn? by Geoffrey Rockwell / PART I: The Socio-Historical Roots - Chap. 1: Technology and the Humanities: A History of Interaction - Chap. 2: Internet, or The Humanistic Machine / PART II: Theoretical and Practical Dimensions - Chap. 3: Writing and Content Production - Chap. 4: Representing and Archiving - Chap. 5: Searching and Organizing / Conclusions: DH in a Global Perspective

Opening Science Sönke Bartling,Sascha Friesike,2013-12-16 Modern information and communication technologies, together with a cultural upheaval within the research community, have profoundly changed research in nearly every aspect. Ranging from sharing and discussing ideas in social networks for scientists to new collaborative environments and novel publication formats, knowledge creation and dissemination as we know it is experiencing a vigorous shift towards increased transparency, collaboration and accessibility. Many assume that research workflows will change more in the next 20 years than they have in the last 200. This book provides researchers, decision makers, and other scientific stakeholders with a snapshot of the basics, the tools, and the underlying visions that drive the current scientific (r)evolution, often called ‘Open Science.’

Doing Digital Humanities Constance Crompton,Richard J Lane,Ray Siemens,2016-09-13 Digital Humanities is rapidly evolving as a significant approach to/method of teaching, learning and research across the humanities. This is a first-stop book for people interested in getting to grips with digital humanities whether as a student or a professor. The book offers a practical guide to the area as well as offering reflection on the main objectives and processes, including: Accessible introductions of the basics of Digital Humanities through to more complex ideas A wide range of topics from feminist Digital Humanities, digital journal publishing, gaming, text encoding, project management and pedagogy Contextualised case studies Resources for starting Digital Humanities such as links, training materials and exercises Doing Digital Humanities looks at the practicalities of how digital research and creation can enhance both learning and research and offers an approachable way into this complex, yet essential topic.

Conservation Education and Outreach Techniques Susan Kay Jacobson,Mallory D. McDuff,Martha C. Monroe,2015 This text presents the theory and practice for creating effective education and outreach programmes for conservation. It describes several techniques for enhancing school resources, marketing environmental messages, developing partnerships for conservation, and designing on-site programmes for natural areas and community centres.

Humanities Computing W. McCarty,2005-01-01 Humanities Computing provides a rationale for a computing practice that is of and for as well as in the humanities and the interpretative social sciences. It engages philosophical, historical, ethnographic and critical perspectives to show how computing helps us fulfil the basic mandate of the humane sciences to ask ever better questions of the most challenging kind. It strengthens current practice by stimulating debate on the role of the computer in our intellectual life, and outlines an agenda for the field to which individual scholars across the humanities can contribute.

Routledge Handbook of Forest Ecology Kelvin S.-H. Peh,Richard T. Corlett,Yves Bergeron,2015-10-16 This comprehensive handbook provides a unique resource covering all aspects of forest ecology from a global perspective. It covers both natural and managed forests, from boreal, temperate, sub-tropical and tropical regions of the world. The book is divided into seven parts, addressing the following themes: forest types forest dynamics forest flora and fauna energy and nutrients forest conservation and management forests and climate change human impacts on forest ecology. While each chapter can stand alone as a suitable resource for a lecture or seminar, the complete book provides an essential reference text for a wide range of students of ecology, environmental science, forestry, geography and natural resource management. Contributors include leading authorities from all parts of the world.
