Predator Empire Ian G. R. Shaw, 2016-08-15 What does it mean for human beings to exist in an era of dronified state violence? How can we understand the rise of robotic systems of power and domination? Focusing on U.S. drone warfare and its broader implications as no other book has to date, *Predator Empire* argues that we are witnessing a transition from a labor-intensive "American empire" to a machine-intensive "Predator Empire." Moving from the Vietnam War to the War on Terror and beyond, Ian G. R. Shaw reveals how changes in military strategy, domestic policing, and state surveillance have come together to enclose our planet in a robotic system of control. The rise of drones presents a series of "existential crises," he suggests, that are reengineering not only spaces of violence but also the character of the modern state. Positioning drone warfare as part of a much longer project to watch and enclose the human species, he shows that for decades—centuries even—human existence has slowly but surely been brought within the artificial worlds of "technological civilization." Instead of incarcerating us in prisons or colonizing territory directly, the *Predator Empire* locks us inside a worldwide system of electromagnetic enclosure—in which democratic ideals give way to a system of totalitarian control, a machinic "rule by Nobody." As accessibly written as it is theoretically ambitious, *Predator Empire* provides up-to-date information about U.S. drone warfare, as well as an in-depth history of the rise of drones.

America's Children and the Environment U.S. Environmental Protection Agency, 2017-05-31
America's Children and the Environment (ACE) is EPA's report presenting data on children's environmental health. ACE brings together information from a variety of sources to provide national indicators in the following areas: Environments and Contaminants, Biomonitoring, and Health. Environments and Contaminants indicators describe conditions in the environment, such as levels of air pollution. Biomonitoring indicators include contaminants measured in the bodies of children and women of child-bearing age, such as children's blood lead levels. Health indicators report the rates at which selected health outcomes occur among U.S. children, such as the annual percentage of children who currently have asthma. Accompanying each indicator is text discussing the relevance of the issue to children's environmental health and describing the data used in preparing the indicator. Wherever possible, the indicators are based on data sources that are updated in a consistent manner, so that indicator values may be compared over time.

Radical David Platt, 2010-05-04 New York Times bestseller What is Jesus worth to you? It's easy for American Christians to forget how Jesus said his followers would actually live, what their new lifestyle would actually look like. They would, he said, leave behind security, money, convenience, even family for him. They would abandon everything for the gospel. They would take up their crosses daily... But who do you know who lives like that? Do you? In *Radical*, David Platt challenges you to consider with an open heart how we have manipulated the gospel to fit our cultural preferences. He shows what Jesus actually said about being his disciple--then invites you to believe and obey what you have heard. And he tells the dramatic story of what is happening as a successful suburban church decides to get serious about the gospel according to Jesus. Finally, he urges you to join in The Radical Experiment -- a one-year journey in authentic discipleship that will transform how you

live in a world that desperately needs the Good News Jesus came to bring.

Introduction to Paleobiology and the Fossil Record Michael J. Benton, David A. T. Harper, 2013-04-25 This book presents a comprehensive overview of the science of the history of life. Paleobiologists bring many analytical tools to bear in interpreting the fossil record and the book introduces the latest techniques, from multivariate investigations of biogeography and biostratigraphy to engineering analysis of dinosaur skulls, and from homeobox genes to cladistics. All the well-known fossil groups are included, including microfossils and invertebrates, but an important feature is the thorough coverage of plants, vertebrates and trace fossils together with discussion of the origins of both life and the metazoans. All key related subjects are introduced, such as systematics, ecology, evolution and development, stratigraphy and their roles in understanding where life came from and how it evolved and diversified. Unique features of the book are the numerous case studies from current research that lead students to the primary literature, analytical and mathematical explanations and tools, together with associated problem sets and practical schedules for instructors and students. “...any serious student of geology who does not pick this book off the shelf will be putting themselves at a huge disadvantage.
