**The Turing Test** Stuart M. Shieber, 2004-06-18 Historical and contemporary papers on the philosophical issues raised by the Turing Test as a criterion for intelligence. The Turing Test is part of the vocabulary of popular culture—it has appeared in works ranging from the Broadway play *Breaking the Code* to the comic strip *Robotman*. The writings collected by Stuart Shieber for this book examine the profound philosophical issues surrounding the Turing Test as a criterion for intelligence. Alan Turing's idea, originally expressed in a 1950 paper titled *Computing Machinery and Intelligence* and published in the journal *Mind*, proposed an indistinguishability test that compared artifact and person. Following Descartes's dictum that it is the ability to speak that distinguishes human from beast, Turing proposed to test whether machine and person were indistinguishable in regard to verbal ability. He was not, as is often assumed, answering the question *Can machines think?* but proposing a more concrete way to ask it. Turing's proposed thought experiment encapsulates the issues that the writings in *The Turing Test* define and discuss. The first section of the book contains writings by philosophical precursors, including Descartes, who first proposed the idea of indistinguishability tests. The second section contains all of Turing's writings on the Turing Test, including not only the *Mind* paper but also less familiar ephemeral material. The final section opens with responses to Turing's paper published in *Mind* soon after it first appeared. The bulk of this section, however, consists of papers from a broad spectrum of scholars in the field that directly address the issue of the Turing Test as a test for intelligence. Contributors John R. Searle, Ned Block, Daniel C. Dennett, and Noam Chomsky (in a previously unpublished paper). Each chapter is introduced by background material that can also be read as a self-contained essay on the Turing Test

**First Lensman** E.E. "Doc" Smith, 2022-05-15 The enemy spacefleet arrowed toward the armored mountain--nerve center of the Galactic Patrol. The Patrol battle cruisers swerved to meet them, and a miles-long cone of pure energy ravaged out at the invaders, destroying whatever it touched. But the moment before the force beam struck, thousands of tiny objects dropped from the enemy fleet and, faster than light, flashed straight at their target--each one an atom bomb powerful enough to destroy Patrol Headquarters by itself! The Galactic Patrol—and civilization itself—had seconds to

live. Unless a miracle happened....

**Advances in Mass Spectrometry** R. M. Elliott, 2013-10-22 *Advances in Mass Spectrometry, Volume 2* documents the proceedings of a conference on mass spectrometry held in Oxford in September 1961. This compilation is categorized into six major topics — mass spectrometry in research; mass spectrometry of inorganic compounds; instruments and techniques; theory and correlation of mass spectra; mass spectra and analysis; and ionization and dissociation. Under these major topics, parts of the papers discussed include field ionization mass spectroscopy; initial kinetic energy discrimination effects in crossed-field ion sources; mass spectrometric study of CaO and Ta; and spark source mass spectrometry as an analytical technique. The book also covers discussions on initial energy of hydrocarbon fragment ions; determination of the structure of alkaloids by mass spectrometry; and application of a time-of-flight mass spectrometer to the examination of ion-molecule interactions. This volume is a useful reference to students and researchers conducting work on mass spectrometry.

**Screened Out** Jean Baudrillard, 2014-01-07 'Watching the president's Christmas message produces this necropolar, white-mass sensation. Seeing the video broadcast of the Christmas service in the cathedral itself, with these pathetic screens and the young worshippers slumped around them here and there, you tell yourself that God and religion deserved better. Deserved to die, yes, but not this. However, watching the presidential figure and his sonorous inanity, you tell yourself that here at least you got what you deserved. Chirac is useless – that goes without saying – but so are we all ... Uselessness of this kind has no origin: it exists immediately, reciprocally; like a shared secret, you savour it implicitly – with its warm bitterness – particularly in these cold snaps, as the very essence of the social bond. Sanctioned by that other interactive uselessness – the uselessness of the screen.' In this stimulating collection of journalistic essays, Jean Baudrillard delves into a host of subjects, ranging from those of his familiar stomping ground (virtual reality, Disney, television) to topics further afield, such as children's rights, holocaust revisionism, AIDS, Formula One racing, mad cow disease and cloning. These intriguing articles demonstrate the true range of Baudrillard's thought and the versatility of the concepts that founded his philosophy.

*The China Study* T. Colin Campbell, Thomas M. Campbell (II.), 2006 Referred to as the Grand Prix of epidemiology by The New York Times, this study examines more than 350 variables of health and nutrition with surveys from 6,500 adults in more than 2,500 counties across China and Taiwan, and conclusively demonstrates the link between nutrition and heart disease, diabetes, and cancer. While revealing that proper nutrition can have a dramatic effect on reducing and reversing these ailments as well as curbing obesity, this text calls into question the practices of many of the current dietary programs, such as the Atkins diet, that are widely popular in the West. The politics of nutrition and the impact of special interest groups in the creation and dissemination of public information are also discussed.

European-Russian Space Cooperation Brian Harvey, 2021-04-10 The story of European-Russian collaboration in space is little known and its importance all too often understated. Because France was the principal interlocutor between these nations, such cooperation did not receive the attention it deserved in English-language literature. This book rectifies that history, showing how Russia and Europe forged a successful partnership that has continued to the present day. Space writer Brian Harvey provides an in-depth picture of how this European-Russian relationship evolved and what factors—scientific, political and industrial—propelled it over the decades. The history begins in the cold war period with the first collaborative ventures between the Soviet Union and European countries, primarily France, followed later by Germany and other European countries. Next, the chapters turn to the missions when European astronauts flew to Russian space stations, the Soyuz rocket made a new home in European territory in the South American jungle and science missions were flown to study deep space. Their climax is the joint mission to explore Mars, called ExoMars, which has already sent a mission to Mars. Through this close examination of these European-Russian efforts, readers will appreciate an altogether new perspective on the history of space exploration, no longer defined by competition, but rather by collaboration and cooperation.
