*jQuery Fundamentals* Rebecca Murphey,

*JavaScript for Absolute Beginners* Terry McNavage,2011-08-23 If you are new to both JavaScript and programming, this hands-on book is for you. Rather than staring blankly at gobbledygook, you'll explore JavaScript by entering and running hundreds of code samples in Firebug, a free JavaScript debugger. Then in the last two chapters, you'll leave the safety of Firebug and hand-code an uber cool JavaScript application in your preferred text editor. Written in a friendly, engaging narrative style, this innovative JavaScript tutorial covers the following essentials: Core JavaScript syntax, such as value types, operators, expressions, and statements provided by ECMAScript. Features for manipulating XHTML, CSS, and events provided by DOM. Object-oriented JavaScript, including prototypal and classical inheritance, deep copy, and mixins. Closure, lazy loading, advance conditional loading, chaining, currying, memoization, modules, callbacks, recursion, and other powerful function techniques. Encoding data with JSON or XML. Remote scripting with JSON-P or XMLHttpRequest Drag-and-drop, animated scrollers, skin swappers, and other cool behaviors. Optimizations to ensure your scripts run snappy. Formatting and naming conventions to prevent you from looking like a greenhorn. New ECMAScript 5, DOM 3, and HTML 5 features such as `Object.create()`, `Function.prototype.bind()`, strict mode, `querySelector()`, `querySelectorAll()`, and `getElementsByClassName()`. As you can see, due to its fresh approach, this book is by no means watered down. Therefore, over the course of your journey, you will go from JavaScript beginner to wizard, acquiring the skills recruiters desire.

*Introduction to Programming in Java: An Interdisciplinary Approach* Robert Sedgewick, Kevin Wayne, 2013-07-31 By emphasizing the application of computer programming not only in success stories in the software industry but also in familiar scenarios in physical and biological science, engineering, and applied mathematics, *Introduction to Programming in Java* takes an interdisciplinary approach to teaching programming with the Java(TM) programming language. Interesting applications in these fields foster a foundation of computer science concepts and programming skills that students can use in later courses while demonstrating that computation is an integral part of the modern world. Ten years in development, this book thoroughly covers the field and is ideal for traditional introductory programming courses. It can also be used as a supplement or a main text for courses that integrate programming with mathematics, science, or engineering.

The Hour of Decision Oswald Spengler, 2022-03-04 Reprint Edition. First published in 1934, the majority of this book was developed just prior to the Nazi seizure of power, with additional material which reflects on its aftermath. It assessed the decline of European power and the crisis of Western civilization in the face of conflict between the ruling class and the lower classes, arguing that only by adherence to their inherited 'Prussianism' would Germany have the solidity to be able to combat these dangers. Despite the influence of his previous writings on key Nazi figures, his criticisms of National Socialism led to the book being banned, although not before it had been widely distributed throughout Germany. **Sir Francis Galton, FRS** Milo Keynes, 1993-07-20 '...this is a splendid, first-class book, the definitive book on Francis Galton and his legacy. The editing has been superb...The timing of its publication is excellent in relation to the increasing interest in human genetics in all areas of the biological and behavioural sciences'. R. Plomin, Distinguished Professor and Director, Center for Development and Health Genetics, Pennsylvania State University Sir Francis Galton (1822-1911), a grandson of Erasmus Darwin, was one of the most versatile men of his time. In his twenties he won fame as an explorer. He worked at the prediction of weather, and described his discovery of the anticyclone. He first became an anthropologist in 1862 when he joined the Ethnological Society. He initiated anthropometry and the measurement of human variation, and the use of photography for the analysis of differences, or individual characteristics, in a group. He recognised the uniqueness of Finger Prints, and, in 1875, first used the records of pairs of identical twins in his researches into the laws of heredity. Besides contributions to human genetics, Galton devised the correlation coefficient, and was thus concerned with the advancement of statistics. In 1883, he coined the word eugenics by which he meant 'good in birth' and 'noble in heredity', and, in 1904, he founded the Galton Laboratory at University College, London. He was first President of the Eugenics Education Society in 1907.
