Donna Womble, Cynthia Kincheloe

Critical Infrastructure Protection III Charles Palmer, Sujeet Sheno, 2009-10-01 The information infrastructure - comprising computers, embedded devices, networks and software systems - is vital to operations in every sector: information technology, telecommunications, energy, banking and finance, transportation systems, chemicals, agriculture and food, defense industrial base, public health and health care, national monuments and icons, drinking water and water treatment systems, commercial facilities, dams, emergency services, commercial nuclear reactors, materials and waste, postal and shipping, and government facilities. Global business and industry, governments, indeed - society itself, cannot function if major components of the critical information infrastructure are degraded, disabled or destroyed. This book, *Critical Infrastructure Protection III*, is the third volume in the annual series produced by IFIP Working Group 11.10 on Critical Infrastructure Protection, an active international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts related to critical infrastructure protection. The book presents original research results and innovative applications in the area of infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. This volume contains seventeen edited papers from the Third Annual IFIP Working Group 11.10 International Conference on Critical Infrastructure Protection, held at Dartmouth College, Hanover, New Hampshire, March 23-25, 2009. The papers were refereed by members of IFIP Working Group 11.10 and other internationally-recognized

experts in critical infrastructure protection.

The Historical Novel Jerome De Groot, 2009-09-10 The historical novel is an enduringly popular genre that raises crucial questions about key literary concepts, fact and fiction, identity, history, reading, and writing. In this comprehensive, focused guide, Jerome de Groot offers an accessible introduction to the genre and critical debates that surround it, including: the development of the historical novel from early eighteenth-century works through to postmodern and contemporary historical fiction different genres, such as sensational or 'low' fiction, crime novels, literary works, counterfactual writing and related issues of audience, value, and authenticity the many functions of historical fiction, particularly the challenges it poses to accepted histories and postmodern questioning of 'grand narratives' the relationship of the historical novel to the wider cultural sphere with reference to historical theory, the internet, television, and film key theoretical concepts such as the authentic fallacy, postcolonialism, Marxism, queer and feminist reading. Drawing on a wide range of examples from across the centuries and around the globe *The Historical Novel* is essential reading for students exploring the interface of history and fiction.

Operating System Principles Per Brinch Hansen, 1973 The main theme of the book is that operating systems are not radically different from other programs. The difficulties encountered in the design of efficient, reliable operating systems are the same as those one encounters in the design of other large programs, such as compilers or payroll programs. This book tries to give students of computer science and professional programmers a general understanding of operating systems - the programs that enable people to share computers efficiently.
