Computer Safety, Reliability, and Security Janusz Górski, 2006-09-22 This book constitutes the refereed proceedings of the 25th International Conference on Computer Safety, Reliability, and Security, SAFECOMP 2006. The 32 revised full papers were carefully reviewed and selected from 101 submissions. Topical sections include systems of systems, security and survivability analysis, nuclear safety and application of standards, formal approaches, networks dependability, coping with change and mobility, safety analysis and assessment, 6th FP integrated project DECOS, and modelling.

National Computer Security Conference, 1993 (16th) Proceedings DIANE Publishing Company, 1995-08 Presentations of a conference. Covers a wide range of topics spanning the new draft Federal Criteria for Information Security, research and development activities, techniques for building secure computer systems and networks, and ethics issues. Papers and panels address harmonization of U.S. criteria for information technology security with international criteria, future techniques for integrating commercial off-the-shelf products into secure systems, access control and other networking challenges, etc. Numerous tables and figures.

ISSE 2006 Securing Electronic Business Processes Sachar Paulus, Norbert Pohlmann, Helmut Reimer, 2007-12-22 This book presents the most interesting talks given at ISSE 2006 - the forum for the interdisciplinary discussion of how to adequately secure electronic business processes. The topics include: Smart Token and e-ID-Card Developments and their Application - Secure Computing and how it will change the way we trust computers - Risk Management and how to quantify security threats - Awareness raising, Data Protection and how we secure corporate information. Adequate information security is one of the basic requirements of all electronic business processes. It is crucial for effective solutions that the possibilities offered by security technology can be integrated with the commercial requirements of the applications. The reader may expect state-of-the-art: best papers of the Conference ISSE 2006.

Information Security Sokratis K. Katsikas, 2006-08-17 This book constitutes the refereed proceedings of the 9th International Conference on Information Security, ISC 2006, held on Samos Island, Greece in August/September 2006. The 38 revised full papers presented were carefully reviewed and selected from 188 submissions. The papers are organized in topical sections.

Critical Threads 2006: IT*Security Dan Verton, 2006-03 The publisher and editors of IT*Security Magazine, the nation's first professional journal of IT*Security and Critical Infrastructure Protection, bring you the top experts and essays of 2005-2006.

Sustainable Development and Planning X G. Passerini, N. Marchettini, 2018-12-17 This volume contains research from the 10th International Conference on Sustainable Development and Planning. The papers included in this volume form a collection of research from academics, policy makers, practitioners and other stakeholders from across the globe who discuss the latest advances in the field. Problems related to development and

planning, which affect rural and urban areas, are present in all regions of the world. Accelerated urbanisation has resulted in deterioration of the environment and loss of quality of life. Urban development can also aggravate problems faced by rural areas such as forests, mountain regions and coastal areas, amongst many others. Taking into consideration the interaction between different regions and developing new methodologies for monitoring, planning and implementation of novel strategies can offer solutions for mitigating environmental pollution and non-sustainable use of available resources. Energy saving and eco-friendly building approaches have become an important part of modern development, which places special emphasis on resource optimisation. Planning has a key role to play in ensuring that these solutions as well as new materials and processes are incorporated in the most efficient manner. The application of new academic findings to planning and development strategies, assessment tools and decision making processes are all covered in this book.

Occupational Health and Safety Sharon Clarke, 2016-05-23 Workplace accidents and errors cost organizations hundreds of billions of dollars each year, and the injured workers and their families endure considerable financial and emotional suffering. It's obvious that increasing employee health and safety pays. The accumulating evidence shows that investing in occupational health and safety results in improved financial and social responsibility performance. There are extensive country differences and wide occupational differences in the incidence of accidents and errors. The International Labour Organization (ILO) estimates that every year there are 2.2 million fatal and 270 million non-fatal accidents or occupational diseases worldwide. Occupational Health and Safety looks at the research into what causes accidents and errors in the workplace. In line with other titles in the series, Occupational Health and Safety emphasizes the psychological and behavioral aspects of risk in organizations. It highlights how organizations differ in their health and safety performance, with case studies throughout and best practices. Key elements focus on: employee selection and training, fostering employee understanding, participation and engagement in health and safety matters, developing a health and safety culture at organizational and group/work unit levels, communicating and reinforcing safe workplace practices and bench-marking one's organization against the industry leaders. The contributors to this volume come from various countries, reflecting unique interest and knowledge in particular areas.

Maintaining Safe Mobility in an Aging Society David W. Eby, Lisa J. Molnar, Paula S. Kartje, 2008-12-22 By 2030, 20 percent of the world's drivers, 60 million in all, will be over the age of 65. Consequently, safe and efficient mobility for older adults is a complex and pressing issue. Maintaining Safe Mobility in an Aging Society addresses the complexities surrounding the booming number of aging drivers and practical solutions for sustaining safe transportation for this growing group. This plainspoken resource informs safe mobility discussions on a variety of areas, including: Necessary skills for safe driving and how age affects them Current evidence on how medical conditions and medication hinder driving skills Comprehensive screening description and assessment practices, issues, and tools Sensitive ways to help older drivers transition into driving cessation Impact of advanced vehicle technology on aging drivers Approaches to strengthening safety-conscious licensing policies Draws the Significant Link Between Mobility and Well Being In addition to discussing how age impacts both the risk and severity of accidents and the link between mobility and well-being, this authoritative work discusses means to achieve safer mobility, including roadway design and community transportation options. Authored by driver safety and awareness experts, it covers psychological and physical changes associated with age (both normal and pathological), including an important but rarely explored aspect of dementia known as wandering behavior. It also addresses the role of emerging technology. Maintaining Safe Mobility in an Aging Society is a concise reference that encompasses an impressive breadth of ready-to-access information. Thorough and systematically organized, it is a groundbreaking and indispensable resource for those providing services to seniors as well as those responsible for transportation policy and design.

Achieving Traffic Safety Goals in the United States National Academies (U.S.). Committee for the Study of Traffic Safety Lessons from Benchmark Nations, 2011 The tool kit will vary among jurisdictions depending on basic legal constraints, community attitudes, road system and traffic

characteristics, and resources. The Transportation Research Board (TRB) undertook a study to identify the sources of safety improvements in other countries. Researchers do not have a complete understanding of the underlying causes of long-term trends in crashes and fatalities. Differences among countries are in part attributable to factors other than government safety policies. To identify keys to success, the TRB study committee examined specific safety programs for which quantitative evaluations are available and relied on the observations of safety professionals with international experience. The committee's conclusions identify differences between U.S. and international practices that can account for some differences in outcomes. The committee recommendations, which are addressed to elected officials and to government safety administrators, identify actions needed in the United States to emulate the successes that other countries have achieved. The recommendations do not comprehensively address all aspects of traffic safety programs but rather address areas of practice that are highlighted by the international comparisons and for which credible evidence of effectiveness is available.--Pub. desc.

Global Status Report on Road Safety 2015 World Health Organization,2015-12-17 The Global status report on road safety 2015, reflecting information from 180 countries, indicates that worldwide the total number of road traffic deaths has plateaued at 1.25 million per year, with the highest road traffic fatality rates in low-income countries. In the last three years, 17 countries have aligned at least one of their laws with best practice on seat-belts, drink-driving, speed, motorcycle helmets or child restraints. While there has been progress towards improving road safety legislation and in making vehicles safer, the report shows that the pace of change is too slow. Urgent action is needed to achieve the ambitious target for road safety reflected in the newly adopted 2030 Agenda for Sustainable Development: halving the global number of deaths and injuries from road traffic crashes by 2020. Made possible through funding from Bloomberg Philanthropies, this report is the third in the series, and provides a snapshot of the road safety situation globally, highlighting the gaps and the measures needed to best drive progress.--Publisher's description.

Patient Safety Lorri Zipperer,2016-05-13 Patient Safety: Perspectives on Evidence, Information and Knowledge Transfer provides background on the patient safety movement, systems safety, human error and other key philosophies that support change and innovation in the reduction of medical error. The book draws from multidisciplinary areas within the acute care environment to share models that support the proactive changes necessary to provide safe care delivery. The publication discusses how the tenets of safety (described in the beginning of the book) can be actively applied in the field to make evidence, information and knowledge (EIK) sharing processes reliable, effective and safe. This is a wide-ranging and important book that is designed to raise awareness of the latent risks for patient safety that are present in the EIK identification, acquisition and distribution processes, structures, and systems of many healthcare institutions across the world. The expert contributors offer systemic, evidence-based improvement processes, assessment concepts and innovative activities to identify these risks to minimize their potential to adversely impact care. These ideas are presented to create opportunities for the field to design and use strategies that enable meaningful implementation and management of EIK. Their thoughts will enable healthcare staff to see EIK as a tangible element contributing toward sustainable patient safety improvements.

Transport and Safety Geetam Tiwari,Dinesh Mohan,2021-05-20 This volume addresses a variety of issues on traffic safety policy, ranging from issues of climate change, urban equity, and transport safety, in a broad global and societal context, while retaining situation-specific details. Written by international experts on issues of transportation and traffic safety, it will be of special interest to advanced researchers in the engineering and planning disciplines working on these issues as well as policy makers concerned with setting up institutions and legislations for traffic safety.
