**Second Wave Intertextuality and the Hebrew Bible** Marianne Grohmann, Hyun Chul Paul Kim, 2019-06-14 An innovative collection of inner-biblical, intertextual, and intercontextual dialogues Essays from a diverse group of scholars offer new approaches to biblical intertextuality that examine the relationship between the Hebrew Bible, art, literature, sociology, and postcolonialism. Eight essays in part 1 cover inner-biblical intertextuality, including studies of Genesis, Judges, and Qoheleth, among others. The eight postbiblical intertextuality essays in part 2 explore Bakhtinian and dialogical approaches, intertextuality in the Dead Sea Scrolls, canonical criticism, reception history, and #BlackLivesMatter. These essays on various genres and portions of the Hebrew Bible showcase how, why, and what intertextuality has been and presents possible potential directions for future research and application. Features: Diverse methods and cases of intertextuality Rich examples of hermeneutical theory and interpretive applications Readings of biblical texts as mutual dialogues, among the authors, traditions, themes, contexts, and lived worlds

**The Origin of Israelite Zion Theology** Antti Laato, 2018-08-23 In this examination of Zion theology and how it arises in the book of Psalms Antti Laato's starting-point is that the Hebrew Bible is the product of the exilic and postexilic times, which nonetheless contains older traditions that have played a significant role in the development of the text. Laato seeks out these older mythical traditions related to Zion using a comparative methodology and looking at Biblical traditions alongside Ugaritic texts and other ancient Near Eastern material. As such Laato provides a historical background for Zion theology which he can apply more broadly to the Psalms. In addition, Laato argues that Zion-related theology in the Psalms is closely related to two events recounted in the Hebrew Bible. First, the architectural details of the Temple of Solomon (1 Kings 6-7), which can be compared with older mythical Zion-related traditions. Second, the religious traditions related to the reigns of David and Solomon such as the Ark Narrative, which ends with David's transfer of the Ark to Jerusalem (2 Sam 6). From this Laato builds an argument for a possible setting in Jerusalem at the time of David and Solomon for the Zion theology that emerges in the Psalms.

**Diaspora Language Contact** Jim Hlavac, Diana Stolac, 2021-10-25 This book is an innovative contribution to contact linguistics as it presents a rarely studied but sizeable diaspora language community in contact with five languages – English, German, Italian, Norwegian and Spanish – across four continents. Foregrounded by diachronic descriptions of heritage Croatian in long-standing minority communities the book presents synchronically based studies of the speech of different generations of diaspora speakers. Croatian offers excellent scope as a base language to examine how lexical and morpho-structural innovations occur in a highly inflective Slavic language where external influence from Germanic and Romance languages appears evident. The possibility of internal factors is also addressed and interpretive models of language change are drawn on. With a foreword by Sarah Thomason, University of Michigan

**Surface Modification of Polymeric Biomaterials** Buddy D. Ratner, David G. Castner, 2013-06-29 Applications of synthetic materials in medicine date back over 4000 years. The Egyptians used linen as sutures. In the Roman Empire, gold was used in dentistry. Perhaps even earlier, ivory and bone may have been used in the body by practitioners of the healing arts. The historical origins of modern biomaterials science are also hard to precisely trace, but many of the ideas that define biomaterials as we know them today evolved in the late 1950s and early 1960s. Surface modification technology has played a prominent role in biomaterials science, and has paralleled the evolution of the modern field. In a symposium organized by the Artificial Heart Program of the NIH National Heart Institute and the Artificial Kidney program of the NIH National Institute of Arthritis and Metabolic Diseases, held in Atlantic City, New Jersey, in 1968, there were already a number of presentations on surface modification. Surface characterization at that time included scanning electron microscopy, ellipsometry, contact angle methods, and infrared internal reflection methods.
