**The Politics of Extraction** Maiah Jaskoski, 2022 In the face of new extraction, communities in Latin America's hydrocarbon and mining regions use participatory institutions powerfully. In some cases, communities act within the formal participatory spaces, while in others, they organized around or in reaction to the institutions, using participatory procedures as focal points for escalating conflict. Communities select their strategies in response to the participatory challenges they confront. Those challenges are associated with contestation over the boundaries that determine access to participatory institutions. Contestation over the line between subnational authority vis-à-vis central-state jurisdictions heightens communities' challenge of initiating a participatory process. Disagreement over the territorial delineation of communities impacted by planned extraction creates for formally non-impacted communities the challenge of gaining inclusion in participatory events. Finally, disputes over the boundary that sets representatives of an affected community apart from the community at large intensify the community's challenge of conveying a position on extraction. This analysis of thirty major extractive conflicts in Bolivia, Colombia, and Peru in the 2000s and 2010s examines community uses of public hearings built into environmental licensing, state-led prior consultations with native communities, and local popular consultations, or referenda--

Eurocode 2 Design Data for Reinforced Concrete Columns

Kar Chun Tan, 2019-03-27 This book was written to facilitate column sizing and reinforcement design for structural engineers. It arranges the design data in a clearly structured manner, and provides quick and easy ways for engineers to compare the feasibility of multiple alternatives (various column sizes and reinforcement configurations). With the help of this book, engineers can rapidly produce outputs for architects, which the

latter can incorporate into their architectural layout plans. These outputs can also benefit quantity surveyors, especially for costing purposes, and help avoid careless design errors. The book is chiefly intended for structural engineers who implement Eurocode 2 for reinforced concrete design. To gain the most from it, readers should possess a basic understanding of column design, e.g. the stresses and forces produced in columns and their reinforcements when subjected to axial load and bending moment. However, the book also provides explanatory notes for the design data tables, allowing them to be used without prior background knowledge.
