Advances in Atmospheric Remote Sensing with Lidar Albert Ansmann, Roland Neuber, Patrick Rairoux, Ulla Wandinger, 2012-12-06 Lidar or laser radar, the depth-resolved remote measurement of atmospheric parameters with optical means, has become an important tool in the field of atmospheric and environmental remote sensing. In this volume the latest progress in the development of Lidar methods, experiments, and applications is described. The content is based on selected and thoroughly refereed papers presented at the 18th International Laser Radar Conference, Berlin, 22 - 26 July 1996. The book is divided into six parts which cover the topics of tropospheric aerosols and clouds, Lidar in space, wind, water vapor, troposheric trace gases and plumes, and stratospheric and mesospheric profiling. As a supplement to fundamental LIDAR textbooks this volume may serve as a guide through the blossoming field of modern Lidar techniques.

Design Recommendations for Intelligent Tutoring Systems: Volume 6 - Team Tutoring Robert A. Sottilare, Arthur C. Graesser, Xiangen Hu, Anne M. Sinatra, 2018-08-15 This book on team tutoring is the sixth in a planned series of books that examine key topics (e.g., learner modeling, instructional strategies, authoring, domain modeling, assessment, impact on learning, team tutoring, machine learning for self-improving systems, potential standards, and learning effect evaluation methods) in intelligent tutoring system (ITS) design. This book focuses on team tutoring. The discussion chapters in this book examine topics through the lens of the Generalized Intelligent Framework for Tutoring (GIFT) (Sottilare, Brawner, Goldberg & Holden, 2012; Sottilare, Brawner, Sinatra, & Johnston, 2017). GIFT is a modular, service-oriented architecture created to reduce the cost and skill required to author ITSs, distribute ITSs, manage instruction within ITSs, and evaluate the effect of ITS technologies on learning, performance, retention, transfer of skills, and other instructional outcomes. Along with this volume, the first five books in this series, Learner Modeling (ISBN 978-0-9893923-0-3), Instructional Management (ISBN 978-0-9893923-2-7), Authoring Tools (ISBN 978-0-9893923-6-5), Domain Modeling (978-0-9893923-9-6) and Assessment Methods (ISBN 978-0-9977257-2-8) are freely avail-able at www.GIFTtutoring.org and on Google Play.

Keian's Prophecy David K. Bonin, 2011-08-24 Apocalyptic Biblical prophecy looms in conjunction with the projected end date of the Mayan Calendar. Some fear the end of the world is truly near. But what if its actually the beginning of the next world, as suggested by world-wide indigenous prognostication? What if we found proof? A major earthquake in Indonesia snuffs out the lives of a quarter million people and triggers a dream in a long slumbering entity half a world away. As it awakens from its extended hibernation, it resumes its long struggle for freedom. Five years later, it finally succeeds. As it rises to the surface, it unknowingly brings with it the dormant memories of a 13,000-year-old spirit. Locked within these memories, lay an ancient prophecy that would shed light on the coming age and bring hope to a crumbling world. A storm begins to brew in the heavens above

Functional Programming, Glasgow 1993 John T. O'Donnell, Kevin Hammond, 2012-12-06 The Functional Programming Group at the University of Glasgow was started in 1986 by John Hughes and Mary Sheeran. Since then it has grown in size and strength, becoming one of the largest computing science research groups at Glasgow and earning an international reputation. The first Glasgow Functional Programming Workshop was organised in the summer of 1988. Its purpose was threefold: to provide a snapshot of all the research going on within the group, to share research ideas between Glaswegians and colleagues in the U.K. and abroad, and to introduce research students to the art of writing and presenting papers at a semi-formal (but still local and friendly) conference. The success of the first workshop has led to an annual series: Rothesay (1988), Fraserburgh (1989), Ullapool (1990). Portree (1991), Ayr (1992), and the workshop reported in these proceedings: Ayr (1993). Most participants wrote a paper that appeared in the draft proceedings (distributed at the workshop), and each draft paper was presented by one of the authors. The papers were all refereed by several other participants at the workshop, both internal and external, and the programme committee selected papers for these proceedings. Most papers have been revised twice, based firstly on feedback at the workshop, and secondly using the referee reports.

Digital Media and Democratic Futures Michael X. Delli Carpini, 2019-03-22 The revolution in digital communications has altered the relationship between citizens and political elites, with important implications for democracy. As new information ecosystems have evolved, as unforeseen examples of their positive and negative consequences have emerged, and as theorizing, data, and research methods have expanded and improved, the central question has shifted from if the digital information environment is good or bad for democratic politics to how and in what contexts particular attributes of this environment are having an influence. It is only through the careful analysis of specific cases that we can begin to build a more comprehensive and nuanced understanding of the role of digital media in democratic theory and practice. The essays in Digital Media and Democratic Futures focus on a variety of information and communication technologies, politically relevant actors, substantive issues, and digital political practices, doing so from distinct theoretical perspectives and methodological approaches. Individually, each of these case studies provides deep insights into the complex and context-dependent relationship between media and democracy. Collectively, they show that there is no single outcome for democracy in the digital age, only a range of possible futures. Contributors: Rena Bivens, Michael X. Delli Carpini, Jennifer Earl, Thomas Elliott, Deen Freelon, Kelly Gates, Philip N. Ships from the Depths Fredrik Søreide, 2011-04-28 Deepwater archaeology uncovers secrets from the ancient maritime past... Thousands of shipwrecks and archaeological sites lie undiscovered in deep water, potentially holding important clues to our maritime past. Scientists have explored only a small percentage of the oceans' depths, as 98 percent of the seabed lies well beyond the reach of conventional diving. Ships from the Depths surveys the dramatic advances in technology over the last few years that have made it possible for scientists to locate, study, and catalogue archaeological sites in waters previously inaccessible to humans. Researcher and explorer Fredrik Søreide presents the development of deepwater archaeology since 1971, when Willard Bascom designed his Alcoa Seaprobe to locate and raise deepwater wrecks in the Mediterranean. Accompanied by descriptions and color photographs of deepwater projects and equipment, this book considers not only techniques that have been developed for location and observation of sites but also removal and excavation methods distinctive to these unique locations, far beyond the reach of scuba gear. Søreide provides an introduction to and survey of the history, development, and potential of this exciting branch of nautical archaeology. Scholars and field archaeologists will appreciate this handy compendium of the current state of the discipline and technology, and general readers will relish this comprehensive look at the challenges and opportunities associated with locating and studying historical and ancient shipwrecks in some of the world's deepest waters.
