Impact of Mineral Impurities in Solid Fuel Combustion R. Gupta,T. Wall,L. Baxter,2007-05-08 This book contains papers presented at the Engineering Foundation Conference on mineral matter in fuels held on November 2-7, 1997 in Kona, Hawaii. The conference is one of a continuing series that was initiated by the CEGB Mar- wood Engineering Laboratories in 1963. The conference was to be eventually organised by the Engineering Foundation as the need for multi-disciplinary work related to c- trolling ash effects in combustors became apparent. The conference covers both the science and the applications. The papers also present case histories, particularly for current fuel technologies, developments in advanced technologies for power generation and mathematical modelling of these processes. Developments since 1963 have been slow, but steady, due to the complexity of the chemical and physical processes involved. However, the research presented here displays great improvement in our understanding of the mechanisms by which mineral matter will influence fuel use. Steve Benson from EERC presented a review and current status of issues related to ash deposition in coal combustion and gasification. The application of new analytical tools, which have been detailed in the previous conferences, is presented. These include CCSEM, as well as new techniques for char- terising sintering of ash, such as TMA, image analysis, X-ray diffraction crystallography and thermal analysis. The new analytical techniques were extended to encompass widely differing fuels such as biomass. Ole H Larsen from ELSAM Denmark presented a review of these advanced techniques.

The Economic Geography of the IT Industry in the Asia Pacific Region Philip Cooke,Glen Searle,Kevin O'Connor,2013-07-18 The

development of the information technology (IT) industry in the Asia Pacific region faces two challenges. Firstly, can its established physical, technical, regional and governance infrastructures be adapted to meet the challenges embedded in the set of products and processes created by the IT industry? Secondly, as this adaptation evolves, which cities and regions will be best suited to connect to or lead global responses to these challenges? The chapters in this book have set out to explore these questions, providing details of change in a range of aspects of the IT industry such as mobile phones, software services, and flat screen design in regions in Japan, Korea, Taiwan, India, China and Australia. The book also outlines the policy responses of national and regional governments in Singapore, India and China and India. These case studies provide a basis to understand effective strategies which could be formulated for the future. This book’s originality emerges from the fine detail provided about firms, in particular regions and cities, from research carried out by young scholars in the past two years. This makes it very useful for readers keen to understand the recent changes in this dynamic industry in a fast growth part of the world, and it will also help to shape thinking by policy makers on policy settings that can be applied.
