Data Protection and Privacy, Volume 12 Dara Hallinan, Ronald Leenes, Serge Gutwirth, Paul De Hert, 2020-01-23 The subjects of this volume are more relevant than ever, especially in light of the raft of electoral scandals concerning voter profiling. This volume brings together papers that offer conceptual analyses, highlight issues, propose solutions, and discuss practices regarding privacy and data protection. It is one of the results of the twelfth annual International Conference on Computers, Privacy and Data Protection, CPDP, held in Brussels in January 2019. The book explores the following topics: dataset nutrition labels, lifelogging and privacy by design, data protection iconography, the substance and essence of the right to data protection, public registers and data protection, modelling and verification in data protection impact assessments, examination scripts and data protection law in Cameroon, the protection of children's digital rights in the GDPR, the concept of the scope of risk in the GDPR and the ePrivacy Regulation. This interdisciplinary book has been written at a time when the scale and impact of data processing on society – not only on individuals, but also on social systems – is becoming ever starker. It discusses open issues as well as daring and prospective approaches, and will serve as an insightful resource for readers with an interest in computers, privacy and data protection.

American Icons Benedikt Feldges, 2007-12-12 Despite the work that has been done on the power of visual communication in general, and about the social influence of television in particular, television's relationship with reality is still something of a black box. Even today, the convention that the screen functions as a window on reality structures much of the production and reception of televisual narratives. But as reality ought to become history at one point, what are we to do with such windows on the past? Developing and applying a highly innovative approach to the modern picture, *American Icons* sets out to expose the historicity of icons, to reframe the history of the screen and to dissect the visual core of a medium that is still so poorly understood. Dismantling the aura of apparently timeless icons and past spectacles with their seductive power to attract the eye, this book offers new ways of seeing the mechanisms at work in our modern pictorial culture.

Introduction to Python Programming for Business and Social Science Applications Frederick Kaefer, Paul Kaefer, 2020-08-06 Would you like to gather big datasets, analyze them, and visualize the results, all in one program? If this describes you, then *Introduction to Python Programming for Business and Social Science Applications* is the book for you. Authors Frederick Kaefer and Paul Kaefer walk you through each step of the Python package installation and analysis process, with frequent exercises throughout so you can immediately try out the functions you've learned. Written in straightforward language for those with no programming background, this book will teach you how to use Python for your research and data analysis. Instead of teaching you the principles and practices of programming as a whole, this application-oriented text focuses on only what you need to know to research and answer social science questions. The text features two types of examples, one set from the General Social Survey and one set from a large taxi trip dataset from a major metropolitan area, to help readers understand the possibilities of working with Python. Chapters on installing and working within a programming environment, basic skills, and necessary commands will get you up and running quickly, while chapters on programming logic, data input and output, and data frames help you establish the basic framework for conducting analyses. Further chapters on web scraping, statistical analysis, machine learning, and data visualization help you apply your skills to your research. More advanced

information on developing graphical user interfaces (GUIs) help you create functional data products using Python to inform general users of data who don't work within Python. First there was IBM® SPSS®, then there was R, and now there's Python. Statistical software is getting more aggressive – let authors Frederick Kaefer and Paul Kaefer help you tame it with Introduction to Python Programming for Business and Social Science Applications.

Parabolas of Science Fiction Brian Attebery, Veronica Hollinger, 2013-07-15 As a geometric term, parabola suggests a narrative trajectory or story arc. In science fiction, parabolas take us from the known to the unknown. More concrete than themes, more complex than motifs, parabolas are combinations of meaningful setting, character, and action that lend themselves to endless redefinition and jazzlike improvisation. The fourteen original essays in this collection explore how the field of science fiction has developed as a complex of repetitions, influences, arguments, and broad conversations. This particular feature of the genre has been the source of much critical commentary, most notably through growing interest in the “sf megatext,” a continually expanding archive of shared images, situations, plots, characters, settings, and themes found in science fiction across media. Contributors include Jane Donawerth, Terry Dowling, L. Timmel Duchamp, Rachel Haywood Ferreira, Pawel Frelik, David M. Higgins, Amy J. Ransom, John Rieder, Nicholas Ruddick, Graham Sleight, Gary K. Wolfe, and Lisa Yaszek.

The Astronaut Instruction Manual Mike Mongo, 2015-10-13 The Astronaut Instruction Manual is a fantastic and vibrant preparatory guide for today's youth – whether their futures are off in space or right here...on Earth.” – Lori Garver, Former NASA Deputy Administrator Endorsed by authors, teachers, and congressman alike, Mike Mongo's Astronaut Instruction Manual excites a new generation of space explorers. The book, designed for children between the ages of 6 and 13, is a functioning, interactive instruction manual. Using mad-lib-style fill-in-the-blanks, Mongo encourages his readers to articulate and illustrate their own vision of next-generation space travel. The Astronaut Instruction Manual captures a new era of enthusiasm for space exploration, driven in part by new space celebrities (Commander Chris Hadfield, Elon Musk), and in part by a shift in popular interest in space (SpaceX rockets, The Mars Colonial Transporter, Kerbal).

An Introductory Guide to Scientific Visualization Rae Earnshaw, Norman Wiseman, 2012-12-06 Scientific visualization is concerned with exploring data and information in such a way as to gain understanding and insight into the data. This is a fundamental objective of much scientific investigation. To achieve this goal, scientific visualization utilises aspects in the areas of computer graphics, user-interface methodology, image processing, system design, and signal processing. This volume is intended for readers new to the

field and who require a quick and easy-to-read summary of what scientific visualization is and what it can do. Written in a popular and journalistic style with many illustrations it will enable readers to appreciate the benefits of scientific visualization and how current tools can be exploited in many application areas. This volume is indispensable for scientists and research workers who have never used computer graphics or other visual tools before, and who wish to find out the benefits and advantages of the new approaches.

Writing about Lives in Science Paola Govoni, Zelda Alice Franceschi, 2014-05-14 Following discussions on scientific biography carried out over the past few decades, this book proposes a kaleidoscopic survey of the uses of biography as a tool to understand science and its context. It offers food for thought on the role played by the gender of the biographer and the biographee in the process of writing. To provide orientation in such a challenging field, some of the authors have accepted to write about their own professional experience while reflecting on the case studies they have been working on. Focusing on (auto)biography may help us to build bridges between different approaches to men and women's lives in science. The authors belong to a variety of academic and professional fields, including the history of science, anthropology, literary studies, and science journalism. The period covered spans from 1732, when Laura Bassi was the first woman to get a tenured professorship of physics, to 2009, when Elizabeth H. Blackburn and Carol W. Greider were the first women's team to have won a Nobel Prize in science.

Science Without God? Peter Harrison, Jon H. Roberts, 2018-11-29 Can scientific explanation ever make reference to God or the supernatural? The present consensus is no; indeed, a naturalistic stance is usually taken to be a distinguishing feature of modern science. Some would go further still, maintaining that the success of scientific explanation actually provides compelling evidence that there are no supernatural entities, and that true science, from the very beginning, was opposed to religious thinking. Science without God? Rethinking the History of Scientific Naturalism shows that the history of Western science presents us with a more nuanced picture. Beginning with the naturalists of ancient Greece, and proceeding through the middle ages, the scientific revolution, and into the nineteenth century, the contributors examine past ideas about 'nature' and 'the supernatural'. Ranging over different scientific disciplines and historical periods, they show how past thinkers often relied upon theological ideas and presuppositions in their systematic investigations of the world. In addition to providing material that contributes to a history of 'nature' and naturalism, this collection challenges a number of widely held misconceptions about the history of scientific naturalism.

Robert Hooke and the Rebuilding of London Michael Cooper, 1998-02-19 Robert Hooke was one of the most gifted men of his age, but it was his great misfortune to work in the sphere of two remarkable men - Isaac Newton and Christopher Wren. While they gained the recognition of a monument in Westminster Abbey, Hooke died unloved, alone and in poverty. This title recognizes the great contribution that he made.

Women in the History of Science Hannah Wills, Sadie Harrison, Erika Lynn Jones, Farrah Lawrence-Mackey, Rebecca Martin, 2023-03-06 Women in the History of Science brings together primary sources that highlight women's involvement in scientific knowledge production around the world. Drawing on texts, images and objects, each primary source is accompanied by an explanatory text, questions to prompt discussion, and a bibliography to aid further research. Arranged by time period, covering 1200 BCE to the twenty-first century, and across 12 inclusive and far-reaching themes, this book is an invaluable companion to students and lecturers alike in exploring women's history in the fields of science, technology, mathematics, medicine and culture. While women are too often excluded from traditional narratives of the history of science, this book centres on the voices and experiences of women across a range of domains of knowledge. By questioning our understanding of what science is, where it happens, and who produces scientific knowledge, this book is an aid to liberating the curriculum within schools and universities.

A Comet of the Enlightenment Johan C.-E. Stén, 2014-05-22 The Finnish mathematician and astronomer Anders Johan Lexell (1740-1784) was a long-time close collaborator as well as the academic successor of Leonhard Euler at the Imperial Academy of Sciences in Saint Petersburg. Lexell was initially invited by Euler from his native town of Abo (Turku) in Finland to Saint Petersburg to assist in the mathematical processing of the astronomical data of the forthcoming transit of Venus of 1769. A few years later he became an ordinary member of the Academy. This is the first-ever full-length biography devoted to Lexell and his prolific scientific output. His rich correspondence especially from his grand tour to Germany, France and England reveals him as a lucid observer of the intellectual landscape of enlightened Europe. In the skies, a comet, a minor planet and a crater on the Moon named after Lexell also perpetuate his memory.

Photography and Failure Kris Belden-Adams, 2020-08-06 Throughout photography's history, failure has played an essential, recurring part in the development and perceived value of this medium. Exploring a range of failures - individual and institutional, technological and historiographical - Photography and Failure asks what it means to fail and considers how this narrative of failure has shaped our understanding of photography. From the trial-and-error beginnings of photochemistry to poor business decisions influenced by fickle public opinion and taste, the founders and early practitioners of photography frequently faced bankruptcy and ignominy. Alongside these individual 'failures', this collection of essays examines the role of museums in rediscovering, preserving and presenting photographs within institutions, as well as technological limitations, such as the

problematic panoramic lens or the digital, archival failures of Snapchat. Moving beyond the physical photograph and these processes, the book also investigates the limitations of photographs themselves, as purveyors of truth, time, space, documentary realism and social change, whether these failures are used to effect or not. Finally, the book probes the historiographical failures affecting the discipline, drawing on key debates, such as the perceived over-emphasis on European and American photography, and the place of photography theory in contemporary art practice. Blurring the boundaries between traditional binaries of art and non-art photography, amateur and professional practice, and individual and corporate perspectives, *Photography and Failure* presents a new approach to understanding and evaluating photographic history.
