🔖 [CLINICAL DATA ANALYSIS ON A POCKET CALCULATOR](#) Ton J. Cleophas,Aeilko H. Zwinderman,2016-01-22 In medical and health care the scientific method is little used, and statistical software programs are experienced as black box programs producing lots of p-values, but little answers to scientific questions. The pocket calculator analyses appears to be, particularly, appreciated, because they enable medical and health professionals and students for the first time to understand the scientific methods of statistical reasoning and hypothesis testing. So much so, that it can start something like a new dimension in their professional world. In addition, a number of statistical methods like power calculations and required sample size calculations can be performed more easily on a pocket calculator, than using a software program. Also, there are some specific advantages of the pocket calculator method. You better understand what you are doing. The pocket calculator works faster, because far less steps have to be taken, averages can be used. The current nonmathematical book is complementary to the nonmathematical SPSS for starters and 2nd levelers (Springer Heidelberg Germany 2015, from the same authors), and can very well be used as its daily companion.

🔖 [MEETING THE CHALLENGES TO MEASUREMENT IN AN ERA OF ACCOUNTABILITY](#) Henry Braun,2016-01-29 Under pressure and support from the federal government, states have increasingly turned to indicators based on student test scores to evaluate teachers and schools, as well as students themselves. The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests, such as in mathematics or English/language arts with a focus on grades 4-8. Teachers in these subject areas, however, constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas, with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end-of-course tests, as well as alternative measures such as portfolios, exhibitions, and student learning objectives. In each case, issues related to design and development, psychometric considerations, and validity challenges are covered from both a generic and a content-specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research-based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field. The NCME series editorial board is comprised of Michael J. Kolen, chair; Robert L. Brennan; Wayne Camara; Edward H. Haertel; Suzanne Lane; and Rebecca Zwick.

🔖 [SCIENCE FOR ALL AMERICANS](#) F. James Rutherford,Andrew Ahlgren,1991-02-14 In order to compete in the modern world, any society today must rank education in science, mathematics, and technology as one of its highest priorities. It's a sad but true fact, however, that most Americans are not scientifically literate. International studies of educational performance reveal that U.S. students consistently rank near the bottom in science and mathematics. The latest study of the National Assessment of Educational Progress has found that despite some small gains recently, the average performance of seventeen-year-olds in 1986 remained substantially lower than it had been in 1969. As the world approaches the twenty-first century, American schools-- when it comes to the advancement of scientific knowledge-- seem to be stuck in the Victorian age. In Science for All Americans, F. James Rutherford and Andrew Ahlgren brilliantly tackle this devastating problem. Based on Project 2061, a scientific literacy initiative sponsored by the American Association for the Advancement of Science, this wide-ranging, important volume explores what constitutes scientific literacy in a modern society; the knowledge, skills, and attitudes all students should acquire from their total school experience from kindergarten through high school; and what steps this country must take to begin reforming its system of education in science, mathematics, and technology. Science for All Americans describes the scientifically literate person as one who knows that science, mathematics, and technology are interdependent enterprises with strengths and limitations; who understands key concepts and principles of science; who recognizes both the diversity and unity of the natural world; and who uses scientific knowledge and scientific ways of thinking for personal and social purposes. Its recommendations for educational reform downplay traditional subject categories and instead highlight the connections between them. It also emphasizes ideas and thinking skills over the memorization of specialized vocabulary. For instance, basic scientific literacy means knowing that the chief function of living cells is assembling protein molecules according to the instructions coded in DNA molecules, but does not mean necessarily knowing the terms ribosome or deoxyribonucleic acid. Science, mathematics, and technology will be at the center of the radical changes in the nature of human existence that will occur during the next life span; therefore, preparing today's children for tomorrow's world must entail a solid education in these areas. Science for All Americans will help pave the way for the necessary reforms in America's schools.

🔖 [BOOST YOUR SCORE](#) Advantage Point,Deborah Goldblatt,2011-02-01 Students, do you have a TI-83 or 84? If so, you've stumbled on a tool that can help you easily boost your ACT math score.Are you afraid you'll forget the distance formula or the Pythagorean theorem? Fed up with matrices and quadratic equations? Or do you just want to improve your accuracy and speed on the ACT math section? Believe it or not, there are no rules banning the use of calculator programs stored in your TI 83 or 84 on the ACT. With some simple programming instructions, you can have your calculator calculate complex equations for you. You'll save time, and you can shift that time over to other problems you may not be able to tackle otherwise. This packet is a collection of the TI calculator programs that are both extremely easy to program (even for the tech-phobic) and most helpful on the ACT. We'll give you step-by-step programming directions and show you how to use these programs on dozens of real ACT questions. This book includes: > Distance formula > Slope finder > Pythagorean theorem > Quadratic equation solver > How to solve that scary-looking matrix problem ... and much more!

🔖 [SCIENCE AT THE EDGE](#) John Brockman,2008 As founder, editor, and publisher of the intellectual forum www.edge.org, John Brockman is well-positioned to initiate and cultivate an ongoing dialogue with today's leading cutting-edge thinkers. The website is a virtual salon for every type of intellectual and scientific pursuit, from evolutionary biology and quantum physics, to crowd psychology and miniaturized computing. Through this vibrant and varied online community, Brockman has shifted sharply away from the stereotype of the introverted, out-of-touch scientist and introduced the reality of a fully aware and involved scientific society. Science at the Edge reflects this brave new world, and Brockman has assembled some of the today's most revolutionary scholars from all scientific disciplines to discuss their unique contributions to the development of modern thought. Far from being a catalog of the marginal disputes of a quarrelsome scientific class, this is a thrilling and intellectually stimulating discussion that serves as an introduction to some of the best minds of the 21st century. This revised and updated version features additional conversations, as well as a new introduction written especially for this edition. The book contains Brockman's discussions, many with bestselling authors, on the following topics: Population theory, with Pulitzer Prize-winning author Jared Diamond Human nature, with Steven Pinker, author of The Stuff Of Thought Technology and the human mind, with Ray Kurzweil, author of the controversial book The Age of Spiritual Machines Ways for humans to make themselves more intelligent, with Marvin Minsky, author of The Emotion Machine Evolution of mankind's violence, with Richard Wrangham, co-author of Demonic Males: Apes and the Origins of Human Violence Possibilities of robot life, with Rodney Brooks, author of Flesh and Machines: How Robots Will Change Us Cognitive science and brain development, with Marc Hauser, author of The Evolution of Communication String theory and dimensions of space, with Lisa Randall, Harvard physics professor A selection of the Scientific American Book Club.

🔖 [COMPUTER SCIENCE AND ITS APPLICATIONS](#) Sang-Soo Yeo,Yi Pan,Yang Sun Lee,Hang Bae Chang,2012-10-19 The 4th FTRA International Conference on Computer Science and Its Applications (CSA-12) will be held in Jeju, Korea on November 22~25, 2012. CSA-12 will be the most comprehensive conference focused on the various aspects of advances in computer science and its applications. CSA-12 will provide an opportunity for academic and industry professionals to discuss the latest issues and progress in the area of CSA. In addition, the conference will publish high quality papers which are closely related to the various theories and practical applications in CSA. Furthermore, we expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject. CSA-12 is the next event in a series of highly successful International Conference on Computer Science and Its Applications, previously held as CSA-11 (3rd edition: Jeju, December, 2011), CSA-09 (2nd edition: Jeju, December, 2009), and CSA-08 (1st edition: Australia, October, 2008).
