Multi-Objective Optimization in Theory and Practice II: Metaheuristic Algorithms André A. Keller,2019-03-28 Multi-Objective Optimization in Theory and Practice is a simplified two-part approach to multi-objective optimization (MOO) problems. This second part focuses on the use of metaheuristic algorithms in more challenging practical cases. The book includes ten chapters that cover several advanced MOO techniques. These include the determination of Pareto-optimal sets of solutions, metaheuristic algorithms, genetic search algorithms and evolution strategies, decomposition algorithms, hybridization of different metaheuristics, and many-objective (more than three objectives) optimization and parallel computation. The final section of the book presents information about the design and types of fifty test problems for which the Pareto-optimal front is approximated. For each of them, the package NSGA-II is used to approximate the Pareto-optimal front. It is an essential handbook for students and teachers involved in advanced optimization courses in engineering, information science and mathematics degree programs.

Formal Verification of Control System Software Pierre-Loïc Garoche,2019-05-14 An essential introduction to the analysis and verification of control system software The verification of control system software is critical to a host of technologies and industries, from aeronautics and medical technology to the cars we drive. The failure of controller software can cost people their lives. In this authoritative and accessible book, Pierre-Loïc Garoche provides control engineers and computer scientists with an indispensable introduction to the formal techniques for analyzing and verifying this important class of software. Too often, control engineers are unaware of the issues surrounding the verification of software, while computer scientists tend to be unfamiliar with the specificities of controller software. Garoche provides a unified approach that is geared to graduate students in both fields, covering formal verification methods as well as the design and verification of controllers. He presents a wealth of new verification techniques for performing exhaustive analysis of controller software. These include new means to compute nonlinear invariants, the use of convex optimization tools, and methods for dealing with numerical imprecisions such as floating point computations occurring in the analyzed software. As the autonomy of critical systems continues to increase—as evidenced by autonomous cars, drones, and satellites and landers—the numerical functions in these systems are growing ever more advanced. The techniques presented here are essential to support the formal analysis of the controller software being used in these new and emerging technologies.

Bond Graph Methodology Wolfgang Borutzky,2009-11-26 Nowadays, engineering systems are of ever-increasing complexity and must be considered as multidisciplinary systems composed of interacting subsystems or system components from different engineering disciplines. Thus, an integration of various engineering disciplines, e.g, mechanical, electrical and control engineering in a current design approach is required. With regard to the systematic development and analysis of system models, interdisciplinary computer aided methodologies are coming more and more important. A graphical description formalism particularly suited for multidisciplinary systems are bond graphs devised by Professor Henry Paynter in as early as 1959 at the Massachusetts Institute of Technology (MIT) in Cambridge, Massachusetts, USA and in use since then all over the world. This monograph is devoted exclusively to the bond graph methodology. It gives a comprehensive, in-depth, state-of-the-art presentation including recent results scattered over research articles and dissertations and research contributions by the author to a number of topics. The book systematically covers the fundamentals of developing bond graphs and deriving mathematical models from them, the recent developments in methodology, symbolic and numerical processing of mathematical models derived from bond graphs. Additionally it discusses modern modelling languages, the paradigm of object-oriented modelling, modern software that can be used for building and for processing of bond graph models, and provides a chapter with small case studies illustrating various applications of the methodology.

Leipziger Sportwissenschaftliche Beiträge Dekan der Sportwissenschaftlichen Fakultät der Universität,2021-01-01 Sport ist ein in weiten Teilen der Gesellschaft aufmerksam wahrgenommenes Phänomen, das sich extrem hoher medialer Aufmerksamkeit erfreut und als wichtiges Distributionselement auch von der Industrie genutzt wird. Sport ist als Gesundheitsverhaltensweise weitgehend anerkannt und der Schulsport ist zu einer festen Größe im Fächerkanon unseres Bildungssystems geworden. Im Vergleich zu anderen Wissenschaftsdisziplinen ist die Sportwissenschaft eine „junge“ Wissenschaft an unseren Universitäten. Sie verfolgt einen anwendungsorientierten und interdisziplinären Ansatz. Zu den Aufgaben einer Wissenschaft gehören die schriftliche Fixierung von Erkenntnissen sowie die Publikation von Forschungsergebnissen, die den Diskurs und die Transparenz wissenschaftlicher Arbeit fördern. Mit der Zeitschrift „Leipziger Sportwissenschaftliche Beiträge“ nehmen wir diese Herausforderung an. Die Zeitschrift wendet sich an alle Teildisziplinen der Sportwissenschaft und bietet sowohl geistes-, sozial- als auch naturwissenschaftlicher Orientierung eine Publikationsplattform. In ihr werden empirische Forschungsbeiträge, theoretische Überblickartikel und wissenschaftliche Mitteilungen veröffentlicht. Der Leser findet ebenfalls Buchrezensionen und Berichte über wissenschaftliche Veranstaltungen. Offen ist die Zeitschrift auch für alle Wissenschaftlerinnen und Wissenschaftler, die in den angrenzenden Disziplinen der Sportwissenschaft tätig sind. Dies soll den Charakter der Interdisziplinarität fördern.

Fractional-order Systems and PID Controllers Kishore Bingi,Rosdiazli Ibrahim,Mohd Noh Karsiti,Sabo Miya Hassan,Vivekananda Rajah Harindran,2019-10-31 This book presents a detailed study on fractional-order, set-point, weighted PID control strategies and the development of curve-fitting-based approximation techniques for fractional-order parameters. Furthermore, in all the cases, it includes the Scilab-based commands and functions for easy implementation and better understanding, and to appeal to a wide range of readers working with the software. The presented Scilab-based toolbox is the first toolbox for fractional-order systems developed in open-source software. The toolboxes allow time and frequency domains as well as stability analysis of the fractional-order systems and controllers. The book also provides real-time examples of the control of process plants using the developed fractional-order based PID control strategies and the approximation techniques. The book is of interest to readers in the areas of fractional-order controllers, approximation techniques, process modeling, control, and optimization, both in industry and academia. In industry, the book is particularly valuable in the areas of research and development (R&D) as well as areas where PID controllers suffice – and it should be noted that around 80% of low-level controllers in industry are PID based. The book is also useful where conventional PIDs are constrained, such as in industries where long-term delay and non-linearity are present. Here it can be used for the design of controllers for real-time processes. The book is also a valuable teaching and learning resource for undergraduate and postgraduate students.
