The Reactive Keyboard John J. Darragh,Ian H. Witten,1992 For people with various forms of physical disability, extreme slowness of communication is commonplace. In the first part of this book a functional architecture for communication aids is discussed and the idea of automatically supplying the intrinsic redundancy contained in natural communication is explained. The distinctions between adaptive and non-adaptive models of communication are shown and details are given of working predictive text generation systems. One such system is the Reactive Keyboard, and in the second part of the book this ...

Assistive Technology for People with Disabilities Denis K. Anson,2018-08-09 How would you make a phone call or send email if you couldn't hear, see, or use your hands? This book shows how assistive technology helps individuals with disabilities perform tasks that people without disabilities may take for granted. Assistive technology can be used in two ways: to help people with disabilities to do things that people without disabilities can do without technology, and to improve access to everyday technology that is not designed for people with disabilities. In both cases, the focus is on matching individuals with the tools best suited to fill their needs. A part of Greenwood's Health and

Medical Issues Today series, Assistive Technology for People with Disabilities explores what technologies are available to individuals with disabilities, what they can help them to accomplish, and potential hurdles to their use that must be overcome. It explores this exciting field broadly and in depth while still keeping the people-first mindset that is the hallmark of assistive technology. In addition, it provides guidance and resources for individuals seeking assistive technology for themselves or for a loved one.

Faster Than Light: The Atari ST and the 16-Bit Revolution Jamie Lendino,2019-06-17 "Power Without the Price." Every Atari fan remembers that slogan from the 1980s as the rallying cry for 16-bit computing in the form of the Atari ST. This groundbreaking computer brought previously unimagined power to the home user for the first time—and transformed an industry or two along the way. Author Jamie Lendino offers a fresh, vital look at the history of the Atari ST, guiding you from its inauspicious genesis at the center of a company known for its gaming consoles to its category-defining triumphs in music, desktop publishing, and video gaming. And he doesn't stop there: He then leaps to the present to pull back the veil on the thriving software and mod communities that aren't just keeping it alive today, but taking it to places its creators never could have imagined. Whether you're a longtime devotee who wants to relive the magic of the machine that unleashed the wonders of Dungeon Master, Time Bandit, and Starglider, an intrepid DIYer on the hunt for new ideas and resources to take your homebrew system to the next level, or a newcomer hungry to learn the ins and outs of one of the most important computers ever created, this book will get you there just as the ST did its long-ago digital pioneers: Faster Than Light.

People and Computers XI Angela Sasse,Jim Cunningham,Russel Winder,2013-04-17 Disciplines, including Human-Computer Interaction (HCI), consist of knowledge supporting practices which solve general problems (Long & Dowell, 1989). A disci pline thus requires knowledge to be acquired which can be applied by practitioners to solve problems within the scope of the discipline. In the case of HCI, such knowledge is being acquired through research and, less formally, through the description of successful system development practice. Some have argued that knowledge is further embodied in the artefacts. HCI knowledge is applied to solve user interface design problems. Such applica tion is facilitated if the knowledge is expressed in a conception which makes explicit the design problems of practitioners. A

conception has been proposed by Dowell & Long (1989). The conception provides a framework within which to reason about the implications of designs for system performance. The framework is concordant with the trend towards design, discernible in recent HCI research. It is further compatible with notions of top-down design, fundamental to software engineering practice. 2 Teaching and the HeI Research and Development Gap 2.1 An Assessment of Current HCI Education Teaching is one means by which practitioners learn to specify discipline problems. It is also a means by which they acquire knowledge to enable the problems to be solved.

Computers Helping People with Special Needs Joachim Klaus,Klaus Miesenberger,Dominique Burger,Wolfgang Zagler,2011-04-05 The introduction to the 1st International Conference on Computers

for Han- cappedPersons(Vienna,1989)byAMinTjoa(UniversityofVienna)andRoland Wagner(UniversityofLinz)?nishedwiththefollowingmissionstatementonthe "Future Direction on Computers for Handicapped Persons": "The di?erent themes show that a lot of problems are solved by the usage of computer technology for helping handicapped persons, for instance for the blind and visually handicapped. A consequence of the discussed themes there are two directions which should be done in the next years. One direction is obvious. The tools must be improved and research and development work should be extended to all groups of handicapped (even if they are numerically not so large as for instancetheblindorvisuallyhandicappedpersons). Ontheothersideinthearea of social implications there is an increasing demand on social science studies on overall computer use among disabled persons. Because sources are in principle missing today about disabled persons work tasks, research in this ?eld must begin by trying to survey this aspect. Particular attention should be paid to the extent and character of computer use among the handicapped in work life. There are a lot of questions, which should be answered during the next years for reaching the aim of rehabilitation. " Fifteen years later the 9th International Conference on Computers Helping People with Special Needs (Paris, 2004) o?ered a comprehensive and deepened view on general awareness,special research and individual applications conce- ing disabled people and their participation in our society.
