Special Affects Eric Jenkins,2016-10-27 Examines the translation of classical Hollywood into Disneys feature films from a Deleuzian perspectiveSpecial Affects retells the emergence of Disney animation and classical Hollywood cinema from the perspective of affect and the embodied modes of generating affection. The emergence of these media enables new modes of perception that create aspecial sensations of wonder, astonishment, marvel and the fantastic. Such affections subsequently become mined by consumer industries for profit, thereby explaining the connection between media and consumerism that today seems inherent to the culture industry. Such modes and their affections are also translated into ideology, as American culture seeks to make sense of the sociocultural changes accompanying these new media, particularly as specific versions of American Dream narratives.Special Affects is the first

extended exploration of the connection between media and consumerism, and the first book to extensively apply Deleuzian film theory to animation. Its exploration of the connection between the animated form and consumerism, and its re-examination of twentieth-century animation from the perspective of affect, makes this an engaging and essential read for film-philosophy scholars and students.

   Satire and Protest in Putin's Russia Aleksei Semenenko,2021-11-30 This book studies satirical protest in today's Russia, addressing the complex questions of the limits of allowed humor, the oppressive mechanisms deployed by the State and pro-State agents as well as counterstrategies of cultural resistance. What forms of satirical protest are there? Is there State-sanctioned satire? Can satire be associated with propaganda? How is satire related to myth? Is satirical protest at all effective?—these are some of the questions the authors tackle in this book. The first part presents an overview of the evolution of satire on stage, on the Internet and on television on the background of the changing post-Soviet media landscape in the Putin era. Part Two consists of five studies of satirical protest in music, poetry and public protests.

Cyberspace Law Hannibal Travis,2013-08-21 This book explores what the American Civil Liberties Union calls the third era in cyberspace, in which filters fundamentally alter the architectural structure of the Internet, with significant implications for free speech. Although courts and nongovernmental organizations increasingly insist upon constitutional and other legal guarantees of a freewheeling Internet, multi-national corporations compete to produce tools and strategies for making it more predictable. When Google attempted to improve our access to information containing in books and the World Wide Web, copyright litigation began to tie up the process of making content searchable, and resulted in the

wrongful removal of access to thousands if not millions of works. Just as the courts were insisting that using trademarks online to criticize their owners is First Amendment-protected, corporations and trade associations accelerated their development of ways to make Internet companies liable for their users' infringing words and actions, potentially circumventing free speech rights. And as social networking and content-sharing sites have proliferated, so have the terms of service and content-detecting tools for detecting, flagging, and deleting content that makes one or another corporation or trade association fear for its image or profits. The book provides a legal history of Internet regulation since the mid-1990s, with a particular focus on efforts by patent, trademark, and copyright owners to compel Internet firms to monitor their online offerings and remove or pay for any violations of the rights of others. This book will be of interest to students of law, communications, political science, government and policy, business, and economics, as well as anyone interested in free speech and commerce on the internet.

Advanced Modelling Techniques in Structural Design Feng Fu,2015-03-26 The successful design and construction of iconic new buildings relies on a range of advanced technologies, in

particular on advanced modelling techniques. In response to the increasingly complex buildings demanded by clients and architects, structural engineers have developed a range of sophisticated modelling software to carry out the necessary structural analysis and design work. Advanced Modelling Techniques in Structural Design introduces numerical analysis methods to both students and design practitioners. It illustrates the modelling techniques used to solve structural design problems, covering most of the issues that an engineer might face, including lateral stability design of tall buildings; earthquake; progressive collapse; fire, blast and vibration analysis; non-linear geometric analysis and buckling analysis . Resolution of these design problems are demonstrated using a range of prestigious projects around the world, including the Buji Khalifa; Willis Towers; Taipei 101; the Gherkin; Millennium Bridge; Millau viaduct and the Forth Bridge, illustrating the practical steps required to begin a modelling exercise and showing how to select appropriate software tools to address specific design problems.

Postdigital Storytelling Spencer Jordan,2019-10-16 Postdigital Storytelling offers a groundbreaking re-evaluation of one of the most dynamic and innovative areas of creativity today: digital storytelling. Central to this reassessment is the emergence of metamodernism as our dominant cultural condition. This volume argues that metamodernism has brought with it a new kind of creative modality in which the divide between the digital and non-digital is no longer binary and oppositional. Jordan explores the emerging poetics of this inherently transmedial and hybridic postdigital condition through a detailed analysis of hypertextual, locative mobile and collaborative storytelling. With a focus on twenty-first century storytelling, including print-based and nondigital art forms, the book ultimately widens our understanding of the modes and forms of metamodernist creativity. Postdigital Storytelling is of value to anyone engaged in creative writing within the arts and humanities. This includes scholars, students and practitioners of both physical and digital texts as well as those engaged in interdisciplinary practice-based research in which storytelling remains a primary approach.

Irritation of Life Jörg Metelmann,Scott Loren,2015-12-09
Irritation of Life ist ein Buch über die politische Kraft des
Gefühlskinos. Loren und Metelmann deuten die preisgekrönten
Filme von Haneke, Lynch und von Trier als Experimente, in denen
sich Melodrama und Irritation treffen - Melodrama als Sigle für
emotionale Überwältigung, Irritation als Verfahren der Avantgarden.
Zusammen gebracht ergeben sie eine spezifische Ästhetik, die die
Wahrnehmung der Zuschauer verändert: Man kann sich nicht nicht
verhalten zu den Bildern der drei Autorenfilmer. Das Buch führt
zunächst die zentralen theoretischen Begriffe ein und entwickelt
daraus im Anschluss an Elsaesser/Hagener ein allgemeines Modell
der Filmanalyse, das die Affektordnung des Films historisch und
systematisch erschliesst (Film- und Wahrnehmungsgeschichte,
Genre, Stil). Den Hauptteil bilden drei ausführlichen Lektüren, die
das Filmwerk von Haneke, Lynch und von Trier erläutern. Die reich
bebilderte Studie mündet in Überlegungen zum Verhältnis von
Kunst und Gesellschaft: Der politische Film heute verbindet
gefühlsethische Aufrüttelung mit Selbstreflexion und geht so über
die Wiederholung von Rezeptionsmustern hinaus in Richtung
Neukartografierung der Wahrnehmung. Er ist nicht Imitation of Life,

sondern Irritation of Life

Picture Pedagogy Paul Duncum,2020-05-14 Contemporary
societies are saturated with pictures. They are globally a part of
everyday life, and they are seductive, offering values and beliefs in
such highly pleasurable forms that it is often difficult to resist their
power to persuade. Yet interpreting pictures is largely neglected in
schools. Picture Pedagogy addresses this head on, showing that
pictures can be used as a powerful form of classroom pedagogy.
Duncum explores key concepts and curriculum examples to
empower you to support students to develop a critical
consciousness about pictures, whether teaching art, media,
language or social studies. Drawing on the interpretive concepts of
representation, rhetoric, ideology, aesthetic pleasure, intertextuality
and the gaze, Duncum shows how you can develop your students'
skills so that their power as viewers can match the power of
pictures to seduce. Examples from the history of fine art and
contemporary popular mass media, including Big Data and fake
news, are drawn together and shown to be appealing to the same
aesthetic pleasures. Often these pleasures are benign, but also
problematic, helping to promote morally questionable ideas about a
range of topics including gender, race and sexual orientation, and

this is explored fully.

Design and Analysis of Tall and Complex Structures Feng Fu,2018-02-01 The design of tall buildings and complex structures involves challenging activities, including: scheme design, modelling, structural analysis and detailed design. This book provides structural designers with a systematic approach to anticipate and solve issues for tall buildings and complex structures. This book begins with a clear and rigorous exposition of theories behind designing tall buildings. After this is an explanation of basic issues encountered in the design process. This is followed by chapters concerning the design and analysis of tall building with different lateral stability systems, such as MRF, shear wall, core, outrigger, bracing, tube system, diagrid system and mega frame. The final three chapters explain the design principles and analysis methods for complex and special structures. With this book, researchers and designers will find a valuable reference on topics such as tall building systems, structure with complex geometry, Tensegrity structures, membrane structures and offshore structures. Numerous worked-through examples of existing prestigious projects around the world (such as Jeddah Tower, Shanghai Tower, and Petronas Tower etc.) are provided to assist the reader's understanding of the

topics. • Provides the latest modelling methods in design such as BIM and Parametric Modelling technique. • Detailed explanations of widely used programs in current design practice, such as SAP2000, ETABS, ANSYS, and Rhino. • Modelling case studies for all types of tall buildings and complex structures, such as: Buttressed Core system, diagrid system, Tube system, Tensile structures and offshore structures etc.
