**Innovative Technology-based Solutions for Primary, Secondary and Tertiary STEM Education** Cristina Hava Muntean, Diana Bogusevschi, Gabriel-Miro Muntean, 2019-09-23 This book presents innovative technology-enhanced learning solutions for STEM education proposed by the EU Horizon 2020-funded NEWTON project by first highlighting the benefits and limitations of existing research work, e-learning systems and case studies that embedded technology in the teaching and learning process. NEWTON's proposed innovative technologies and pedagogies include adaptive multimedia and multiple sensorial media, virtual reality, fabrication and virtual labs, gamification, personalisation, game-based learning and self-directed learning pedagogies. The main objectives are to encourage STEM education among younger generations and to attract students to STEM subjects, making these subjects more appealing and interesting. Real life deployment of NEWTON technologies and developed educational materials in over 20 European educational institutions at primary, secondary and tertiary levels demonstrated statistical significant increases in terms of learner satisfaction, learner motivation and knowledge acquisition.

*Homebrew Gaming and the Beginnings of Vernacular Digitality* Melanie Swalwell, 2021-08-17 The overlooked history of an early appropriation of digital technology: the creation of games through coding and hardware hacking by microcomputer users. From the late 1970s through the mid-1980s, low-end microcomputers offered many users their first taste of computing. A major use of these inexpensive 8-bit machines--including the TRS System 80s and the Sinclair, Atari, Microbee, and Commodore ranges--was the development of homebrew games. Users with often self-taught programming skills devised the graphics, sound, and coding for their self-created games. In this book, Melanie Swalwell offers a history of this era of homebrew game development, arguing that it constitutes a significant instance of the early appropriation of digital computing

technology. Drawing on interviews and extensive archival research on homebrew creators in 1980s Australia and New Zealand, Swalwell explores the creation of games on microcomputers as a particular mode of everyday engagement with new technology. She discusses the public discourses surrounding microcomputers and programming by home coders; user practices; the development of game creators' ideas, with the game Donut Dilemma as a case study; the widely practiced art of hardware hacking; and the influence of 8-bit aesthetics and gameplay on the contemporary game industry. With Homebrew Gaming and the Beginnings of Vernacular Digitality, Swalwell reclaims a lost chapter in video game history, connecting it to the rich cultural and media theory around everyday life and to critical perspectives on user-generated content.

*Shipboard Management* Simon Daniels, 2024-04-08 Shipboard Management supports students undertaking qualification at all stages of maritime training, enhancing and developing knowledge and understanding of the key issues in the Merchant Shipping (Training and Certification) Regulations 1997, as subsequently amended by the 2015 Regulations and other legislation. Informed by real-world experience of commercial shipboard operations,

Shipboard Management offers an essential study guide addressing the issues which are most frequently confronted in the context of ship management. It is designed to foster the ability to analyse and apply the dynamics of the legal and operational structures in which the shipboard management team must engage in merchant vessel operations. Students will progress through increasingly difficult levels of learning activity in order to develop problem-solving abilities. The text focuses on the application of skills and techniques that are fundamental to commercial shipping and that meet the demands of the Merchant Shipping (Standards of Training, Certification and Watchkeeping) Regulations. This will be essential reading for all students and candidates on MCA-accredited Deck training courses, and for seafarers wishing to apply for Certificates of Equivalent Competency. It is also a key reference for professionals in ship-owning and management companies, and for maritime lawyers.

Digital Personalized Health and Medicine L.B. Pape-Haugaard, C. Lovis, I. Cort Madsen, 2020-06-17 Digital health and

medical informatics have grown in importance in recent years, and have now become central to the provision of effective healthcare around the world. This book presents the proceedings of the 30th Medical Informatics Europe conference (MIE). This edition of the conference, hosted by the European Federation for Medical Informatics (EFMI) since the 1970s, was due to be held in Geneva, Switzerland in April 2020, but as a result of measures to prevent the spread of the Covid19 pandemic, the conference itself had to be cancelled. Nevertheless, because this collection of papers offers a wealth of knowledge and experience across the full spectrum of digital health and medicine, it was decided to publish the submissions accepted in the review process and confirmed by the Scientific Program Committee for publication, and these are published here as planned. The 232 papers are themed under 6 section headings: biomedical data, tools and methods; supporting care delivery; health and prevention; precision medicine and public health; human factors and citizen centered digital health; and ethics, legal and societal aspects. A 7th section deals with the Swiss personalized health network, and section 8 includes the 125 posters accepted for the conference. Offering an overview of current trends and developments in digital health and medical informatics, the book provides a valuable information resource for researchers and health practitioners alike.

Advances in Air Navigation Services Tone

Magister, 2012-08-01 Provision of air navigation services entered a new era of performance scheme. The performance scheme provides binding targets on four key performance areas of safety, capacity, environment and cost-efficiency. It is imposed that targets are fully achieved, but it is not prescribed how, this being typical for the performance based and goal oriented regulation. Those key performance areas are interlaced by proportional and inversely proportional interdependencies. Namely, for example

and simplified into one sentence; if one aims to increase sector capacity with existing human resources (constant staff costs) and not investing into the technology (constant support cost) to achieve improved cost-efficiency of service provision, the resulting overloaded system might unlock the Pandora box of latent safety issues. Since failure is not an option, we - the general, migrating and traveling public, airspace users, airport operators, air navigation services providers and the economy - will gain attaining the goals of performance scheme in the process. However, un-answered cardinal question is what is the winning strategy? This book provides do-not-forget-peculiarities insight into the elements of new business model of air navigation services provision as evolution of the latter became essential.

*Theory of Accounting Engineering* M.A. Khairy, 2022-09-24

From the beginning of accounting history in the fourteenth century to date, the updating of accounting took place to standardize accounting principles and create new standards and new sets of rules. There were no updates applied to the core of the financial accounting to add new enhancements and facilities to help grow and manage small business with cost-effective tools. The current accounting system delays the process of growing small business financially and administratively. With the revolution of communication worldwide, small businesses have been growing tremendously; by applying simple ways of model engineering technology and computing science to restructure the existing accounting principles, it makes possible to create cost-effective tools and resources that put useful information at our fingertips. It reduces bookkeeping process, eliminates data redundancy, increases security levels, limits the need of third parties, and gets the necessary information to run and monitor business successfully. *Theory of Accounting Engineering: Reimaging Accounting in the Twenty-First Century for Everyone* is for anyone interested in having a small business, either non-accountants or professional accountants, to manage business

financials simply, easily without any sophistication.
