Software Studies Matthew Fuller, 2008 This collection of short expository, critical and speculative texts offers a field guide to the cultural, political, social and aesthetic impact of software. Experts from a range of disciplines each take a key topic in software and the understanding of software, such as algorithms and logical structures.

Reasoning Web Norbert Eisinger, Jan Maluszynski, 2005-08-25 This volume contains the tutorial papers of the Summer School "Reasoning Web," July 25–29, 2005 (<http://reasoningweb.org>). The School was hosted by the University of Malta and was organized by the Network of Excellence REVERSE "Reasoning on the Web with Rules and Semantics" (<http://reverse.net>), funded by the EU Commission and by the Swiss Federal Office for Education and Science within the 6th Framework Programme under the project reference number 506779. The objective of the school was to provide an introduction into methods and issues of the Semantic Web, a major endeavor in current Web research, where the World Wide Web Consortium W3C plays an important role. The main idea of the Semantic Web is to enrich Web data with meta-data carrying a "meaning" of the data and allowing Web-based systems to reason about data (and meta-data). The meta-data used in Semantic Web applications is usually linked to a conceptualization of the application domain shared by different applications. Such a conceptualization is called an ontology and specifies classes of objects and relations between them. Ontologies are defined by ontology languages, based on logic and

supporting formal reasoning. Just as the current Web is inherently heterogeneous in data formats and data semantics, the Semantic Web will be inherently heterogeneous in its reasoning forms. - indeed, any single form of reasoning turns out to be insufficient in the Semantic Web.

Principles of Programming Languages Bruce J. MacLennan, 1999 In-depth case studies of representative languages from five generations of programming language design (Fortran, Algol-60, Pascal, Ada, LISP, Smalltalk, and Prolog) are used to illustrate larger themes.--BOOK JACKET.

Programming Languages: Principles and Practices
Kenneth C. Louden, Kenneth A. Lambert, 2011-01-26
Kenneth Louden and Kenneth Lambert's new edition of PROGRAMMING LANGUAGES: PRINCIPLES AND PRACTICE, 3E gives advanced undergraduate students an overview of programming languages through general principles combined with details about many modern languages. Major languages used in this edition include C, C++, Smalltalk, Java, Ada, ML, Haskell, Scheme, and Prolog; many other languages are discussed more briefly. The text also contains extensive coverage of implementation issues, the theoretical foundations of programming languages, and a large number of exercises, making it the perfect bridge to compiler courses and to the theoretical study of programming languages.

Hardware-in-the-loop Simulation Framework Marco Aurelio Antonio Sanvido,2002

Design by Numbers John Maeda,2001-08-24 A pioneering graphic designer shows how to use the computer as an artistic medium in its own right. Most art and technology projects pair artists with engineers or scientists: the artist has the conception, and the technical person provides the know-how. John Maeda is an artist and a computer scientist, and he views the computer not as a substitute for brush and paint but as an artistic medium in its own right. Design By Numbers is a reader-friendly tutorial on both the philosophy and nuts-and-bolts techniques of programming for artists. Practicing what he preaches, Maeda composed Design By Numbers using a computational process he developed specifically for the book. He introduces a programming language and development environment, available on the Web, which can be freely downloaded or run directly within any JAVA-

enabled Web browser. Appropriately, the new language is called DBN (for design by numbers). Designed for visual people—artists, designers, anyone who likes to pick up a pencil and doodle—DBN has very few commands and consists of elements resembling those of many other languages, such as LISP, LOGO, C/JAVA, and BASIC. Throughout the book, Maeda emphasizes the importance—and delights—of understanding the motivation behind computer programming, as well as the many wonders that emerge from well-written programs. Sympathetic to the mathematically challenged, he places minimal emphasis on mathematics in the first half of the book. Because computation is inherently mathematical, the book's second half uses intermediate mathematical concepts that generally do not go beyond high-school algebra. The reader who masters the skills so clearly set out by Maeda will be ready to exploit the true character of digital media design.

Harris, Jeffery L. Hirst, Michael

Mossinghoff, 2009-04-03 These notes were first used in an introductory course team taught by the authors at Appalachian State University to

advanced undergraduates and beginning graduates. The text was written with four pedagogical goals in mind: offer a variety of topics in one course, get to the main themes and tools as efficiently as possible, show the relationships between the different topics, and include recent results to convince students that mathematics is a living discipline.

LISP-STAT Luke Tierney, 2009-09-25 Written for the professional statistician or graduate statistics student, the primary objective of this book is to describe a system, based on the LISP language, for statistical computing and dynamic graphics to show how it can be used as an effective platform for a wide range of statistical computing tasks ranging from basic calculations to customizing dynamic graphs. In addition, it introduces object-oriented programming and graphics programming in a statistical context. The discussion of these ideas is based on the Lisp-Stat system; readers with access to such a system can reproduce the examples presented and use them as a basis for further experimentation and study.

Object-oriented Software Construction Bertrand Meyer, 1997 This volume aims to study how practicing software developers, in industrial as well as academic environments, can use object technology to improve the quality of the software they produce. It includes topics on concurrency and Internet programming.

Online auctions are the past; fixed-price selling is the future. It's time to move beyond eBay and first-generation online selling and start Selling Online 2.0.
