Guide to Efficient Software Design David P. Voorhees, 2020-01-01 This classroom-tested textbook presents an active-learning approach to the foundational concepts of software design. These concepts are then applied to a case study, and reinforced through practice exercises, with the option to follow either a structured design or object-oriented design paradigm. The text applies an incremental and iterative software development approach, emphasizing the use of design characteristics and modeling techniques as a way to represent higher levels of design abstraction, and promoting the model-view-controller (MVC) architecture. Topics and features: provides a case study to illustrate the various concepts discussed throughout the book, offering an in-depth look at the pros and cons of different software designs; includes discussion questions and hands-on exercises that extend the case study and apply the concepts to other problem domains; presents a review of program design fundamentals to reinforce understanding of the basic concepts; focuses on a bottom-up approach to describing software design concepts; introduces the characteristics of a good software design, emphasizing the model-view-controller as an underlying architectural principle; describes software design from both object-oriented and structured perspectives; examines additional topics on human-computer interaction design, quality assurance, secure design, design patterns, and persistent data storage design; discusses design concepts that may be applied to many types of software development projects; suggests a template for a software design document, and offers ideas for

further learning. Students of computer science and software engineering will find this textbook to be indispensable for advanced undergraduate courses on programming and software design. Prior background knowledge and experience of programming is required, but familiarity in software design is not assumed.

Will He Go? Lawrence Douglas,2020-05-19 In advance of the 2020 election, legal scholar Lawrence Douglas prepares readers for a less-than-peaceful transition of power. It doesn't require a strong imagination to get a sense of the mayhem Trump will unleash if he loses a closely contested election. It is no less disturbing to imagine Trump still insisting that he is the rightful leader of the nation. With millions of diehard supporters firmly believing that their revered president has been toppled by malignant forces of the Deep State, Trump could remain a force of constitutional chaos for years to come. **WILL TRUMP GO?** addresses such questions as: How might Trump engineer his refusal to acknowledge electoral defeat? What legal and extra-legal paths could he pursue in mobilizing a challenge to the electoral outcome? What legal, political, institutional, and popular mechanisms can be used to stop him? What would be the fallout of a failure to remove him from office? What would be the fallout of a successful effort to unseat him? Can our democracy snap back from Trump? Trump himself has essentially told the nation he will never accept electoral defeat. A book that prepares us for Trump's refusal to concede, then, is hardly speculative; it is a necessary precaution against a coming crisis.

Managing Across Borders Christopher A. Bartlett,Sumantra Ghoshal,2002 Offers insights into the management of companies operating in an international environment. This book describes the emergence of a revolutionary corporate form - the transnational - and reveals how the nature of the global competitive game has fundamentally changed.

Climate Change-Resilient Agriculture and Agroforestry Paula Castro, Anabela Marisa Azul, Walter Leal Filho, Ulisses M. Azeiteiro, 2019-01-24 This book collects wide-ranging contributions such as case studies, reviews, reports on technological developments, outputs of research/studies, and examples of successful projects, presenting current knowledge and raising awareness to help the agriculture and forestry sectors find solutions for mitigating climate variability and adapting to change. It brings the topic of ecosystem services closer to education and learning, as targeted by the Framework Convention on Climate Change and the Paris Agreement, the 2030 Agenda for Sustainable Development and the EU Biodiversity Strategy to 2020. Climate change and its impacts on agriculture and agroforestry have been observed across the world during the last 50 years. Increasing temperatures, droughts, biotic stresses and the impacts of extreme events have continuously decreased agroforestry systems' resilience to the effects of climate change. As such, there is a need to adapt farming and agroforestry systems so as to make them better able to handle ever-changing climate conditions, and to preserve habitats and ecosystems services.
