#### **Strategy and Methodology for Radioactive Waste Characterization**

International Atomic Energy Agency, 2007 Over the past decade significant progress has been achieved in the development of waste characterization and control procedures and equipment as a direct response to ever-increasing requirements for quality and reliability of information on waste characteristics. Failure in control procedures at any step can have important, adverse consequences and may result in producing waste packages which are not compliant with the waste acceptance criteria for disposal, thereby adversely impacting the repository. The information and guidance included in this publication corresponds to recent achievements and reflects the optimum approaches, thereby reducing the potential for error and enhancing the quality of the end product. -- Publisher's description.

**Decentralization In Health Care: Strategies And Outcomes** Saltman, Richard, Busse, Reinhard, Figueras, Josep, 2006-12-01 Exploring the capacity and impact of decentralization within European health care systems, this book examines both the theoretical underpinnings as well as practical experience with decentralization.

**Stainless Steels for Design Engineers** Michael F. McGuire, 2008 The rate of growth of stainless steel has outpaced that of other metals and alloys, and by 2010 may surpass aluminum as the second most widely used metal after carbon steel. The 2007 world production of stainless steel was approximately 30,000,000 tons and has nearly doubled in the last ten years. This growth is occurring at the same time that the production of stainless steel continues to become more consolidated. One result of this is a more widespread need to understand stainless steel with fewer resources to provide that information. The concurrent technical evolution in stainless steel and increasing volatility of raw material prices has made it more important for the engineers and designers who use stainless steel to make sound technical judgments about which stainless steels to use and how to use them.

**New Quests in Stellar Astrophysics II** Miguel Chavez Dagostino, Emanuele Bertone, Daniel Rosa Gonzalez, Lino Hector Rodriguez-Merino, 2009-02-27 This book presents an up-to-date collection of reviews and contributed articles in the field of ultraviolet astronomy. Its content has been mainly motivated by the recent access to the rest frame UV light of distant red galaxies, gained through large optical facilities. This driveway has derived in a renewed interest on the stars that presumably dominate or have important effects on the integrated UV properties of evolved systems of the nearby and faraway Universe. The topics included in this volume extend from the fresh spectroscopic analyses of high redshift early-type galaxies observed with the 8-10m class telescopes to the fundamental outcomes from various satellites, from the long-lived International Ultraviolet Explorer to current facilities, such as the Galaxy Evolution Explorer. This is one of the few volumes published in recent years devoted to UV astronomical research and the only one dedicated to the properties of evolved stellar populations at these wavelengths. This contemporary panorama will be an invaluable resource in the preparation of the next planned space missions, such as the World Space Observatory and the Ultraviolet Imaging Telescope.

**Machine Learning Techniques for Space Weather** Enrico Camporeale, Simon Wing, Jay Johnson, 2018-05-31 Machine Learning Techniques for Space Weather provides a thorough and accessible presentation of machine learning techniques that can be employed by space weather professionals. Additionally, it presents an overview of real-world applications in space science to the machine learning community, offering a bridge between the fields. As this volume demonstrates, real advances in space weather can be gained using nontraditional approaches that take into account nonlinear and complex dynamics, including information theory, nonlinear auto-regression models, neural networks and clustering algorithms. Offering practical techniques for translating the huge amount of information hidden in data into useful knowledge that allows for better prediction, this book is a unique and important resource for space physicists, space weather professionals and computer scientists in related fields. Collects many representative non-traditional approaches to space weather into a single volume Covers, in an accessible way, the mathematical background that is not often explained in detail for space scientists Includes free software in the form of simple MATLAB® scripts that allow for replication of results in the book, also familiarizing readers with algorithms

**Combustion** J. Warnatz, Ulrich Maas, Robert W. Dibble, 2013-04-17 This book provides a rigorous treatment of the coupling of chemical reactions and fluid flow. Combustion-specific topics of chemistry and fluid mechanics are considered and tools described for the simulation of combustion processes.

This edition is completely restructured. Mathematical Formulae and derivations as well as the space-consuming reaction mechanisms have been replaced from the text to appendix. A new chapter discusses the impact of combustion processes on the atmosphere, the chapter on auto-ignition is extended to combustion in Otto- and Diesel-engines, and the chapters on heterogeneous combustion and on soot formation are heavily revised.

**Children's Social Worlds in Cultural Context** Tiia Tulviste,Deborah L. Best,Judith L. Gibbons,2019-09-10 This book addresses cultural variability in children's social worlds, examining the acquisition, development, and use of culturally relevant social competencies valued in diverse cultural contexts. It discusses the different aspects of preschoolers' social competencies that allow children - including adopted, immigrant, or at-risk children - to create and maintain relationships, communicate, and to get along with other people at home, in daycare or school, and other situations. Chapters explore how children's social competencies reflect the features of the social worlds in which they live and grow. In addition, chapters examine the extent that different cultural value orientations manifest in children's social functioning and describes how parents in autonomy-oriented cultures tend to value different social skills than parents with relatedness or autonomous-relatedness orientations. The book concludes with recommendations for future research directions. Topics featured in this book include: Gender development in young children. Peer interactions and relationships during the preschool years. Sibling interactions in western and non-western cultural groups. The roles of grandparents in child development. Socialization and development in refugee children. Child development within institutional care. Children's Social Worlds in Cultural Context is a valuable resource for researchers, clinicians/practitioners, and graduate students in developmental psychology, child and school psychology, social work, cultural anthropology, family studies, and education.

*Thoughts on the Gita* Swami Vivekananda,1963 The Bhagavad Gita is one of the most important scriptures of the Hindus. The very fact that this scripture has been commented upon by innumerable saints only highlights its great importance. This being the case, readers would find it deeply interesting to know what Swami Vivekananda had to say regarding it. In the pages of this booklet are found those wonderful ideas and authoritative statements regarding Gita by one who was aptly fit to bring out the hidden significance and essence of this great scripture. Published by Advaita Ashrama, a publication house of Ramakrishna Math, Belur Math, India.

**Electrochemistry and Corrosion Science** Nestor Perez,2004-04-30 Electrochemistry and Corrosion Science is a graduate level text/professional reference that describes the types of corrosion on metallic materials. The focus will be on modeling and engineering approximation schemes that describe the thermodynamics and kinetics of electrochemical systems. The principles of corrosion behavior and metal recovery are succinctly described with the aid of pictures, figures, graphs and schematic models, followed by derivation of equations to quantify relevant parameters. Example problems are included to illustrate the application of electrochemical concepts and mathematics for solving complex corrosion problems. This book differs from others in that the subject matter is organized around the modeling and predicating approaches that are used to determine detrimental and beneficial electrochemical events. Thus, this book will take a more practical approach and make it especially useful as a basic text and reference for professional engineers.

**The Evolution of Grammar** Joan Bybee,Revere Perkins,William Pagliuca,1994-11-15 Joan Bybee and her colleagues present a new theory of the evolution of grammar that links structure and meaning in a way that directly challenges most contemporary versions of generative grammar. This study focuses on the use and meaning of grammatical markers of tense, aspect, and

modality and identifies a universal set of grammatical categories. The authors demonstrate that the semantic content of these categories evolves gradually and that this process of evolution is strikingly similar across unrelated languages. Through a survey of seventy-six languages in twenty-five different phyla, the authors show that the same paths of change occur universally and that movement along these paths is in one direction only. This analysis reveals that lexical substance evolves into grammatical substance through various mechanisms of change, such as metaphorical extension and the conventionalization of implicature. Grammaticization is always accompanied by an increase in frequency of the grammatical marker, providing clear evidence that language use is a major factor in the evolution of synchronic language states. The Evolution of Grammar has important implications for the development of language and for the study of cognitive processes in general.

*Water Quality Modelling for Rivers and Streams* Marcello Benedini, George Tsakiris, 2013-02-11 The main objective of the Water Framework Directive in the European countries is to achieve a "good status" of all the water bodies, in the integrated management of river basins. In order to assess the impact of improvement measures, water quality models are necessary. During the previous decades the progress in computer technology and computational methods has supported the development of advanced mathematical models for pollutant transport in rivers and streams. This book is intended to provide the fundamental knowledge needed for a deeper understanding of these models and the development of new ones, which will fulfil future quality requirements in water resources management. This book focuses on the fundamentals of computational techniques required in water quality modelling. Advection, dispersion and concentrated sources or sinks of contaminants lead to the formulation of the fundamental differential equation of pollutant transport. Its integration, according to appropriate initial and boundary conditions and with the knowledge of the velocity field, allows for pollutant behaviour to be assessed in the entire water body. An analytical integration is convenient only in one-dimensional approach with considerable simplification. Integration in the numerical field is useful for taking into account particular aspects of water body and pollutants. To ensure their reliability, the models require accurate calibration and validation, based on proper data, taken from direct measurements. In addition, sensitivity and uncertainty analysis are also of utmost importance. All the above items are discussed in detail in the 21 chapters of the book, which is written in a didactic form for professionals and students.

**Very Low-Mass Stars and Brown Dwarfs** Rafael Rebolo, Maria Rosa Zapatero-Osorio, 2000-11-27 This volume provides a state-of-the-art review of our current knowledge of brown dwarfs and very low-mass stars. The hunt for and study of these elusive objects is currently one of the most dynamic areas of research in astronomy for two reasons. Brown dwarfs bridge the gap between stars and planets, and they may constitute an important part of the 'dark matter' of the Universe. This volume presents review articles from a team of international authorities who gathered at a conference in La Palma to assess the spectacular progress that has been made in this field in the last few years.

**The Solar Corona** Leon Golub, Jay M. Pasachoff, 2010 Second edition graduate level textbook giving an up-to-date treatment of our understanding of the solar corona.
