Global Marketing, 3rd edition, provides students with a truly international treatment of the key principles that every marketing manager should grasp. International markets present different challenges that require a marketer to think strategically and apply tools and techniques creatively in order to respond decisively within a fiercely competitive environment. Alon et al. provide students with everything they need to rise to the challenge: Coverage of small and medium enterprises, as well as multinational corporations, where much of the growth in international trade and global marketing has occurred; A shift toward greater consideration of services marketing as more companies move away from manufacturing; A shift from developed markets to emerging markets with more dynamic environments; A focus on emerging markets to equip students with the skills necessary to take advantage of the opportunities that these rapidly growing regions present; Chapters on social media, innovation, and technology teaching students how to incorporate these new tools into their marketing strategy; New material on sustainability, ethics, and corporate social responsibility—key values for any modern business; Short and long cases and examples throughout the text show students how these principles and techniques are applied in the real world. Covering key topics not found in competing books, Global Marketing will equip today's students with the knowledge and confidence they need to become leading marketing managers. Applied Drilling Engineering Adam T. Bourgoyne, 1986 Applied Drilling Engineering presents engineering science fundamentals as well as examples of engineering applications involving those fundamentals.

The New Wars Herfried Münkler, 2005 This important new book deals with the changing nature of war in the post-Cold War era and the emergence of new forms of warfare in which warlords, mercenaries and terrorists play an increasingly important role. In the modern era, warfare came to play a crucial role in the formation of states, whereas the new wars emerging at the beginning of the 21st century have mostly gone together with the failure or collapse of states. The author draws out the key shifts involved in this process: from symmetrical conflicts between states to asymmetrical global relationships of force; from national armies to increasingly private or commercial bands of warlords, child soldiers and mercenaries; from pitched battles to protracted conflicts in which there is often little fighting and most of the violence is directed against civilians. Changes in weapons technology have combined with complex economic factors to make the prospect of endlessly simmering wars a real danger in the years to come. Against this background, the author outlines the rise of a novel form of international terrorism, conceived more as a political method of communication than as an element in a military strategy. The resulting challenges faced by Western governments, and the

costs and benefits associated with any response, are taken up in a concluding section that contrasts the characteristic European and American approaches and examines the implications for the future of international law. This book will be of important to students of political science, international relations, war and peace studies, conflict studies and peace studies. It will also appeal to the general reader with an interest in this topical subject.
