Search and Recover Shirlee McCoy, Margaret Daley, 2021-02-23 Tracking Justice by Shirlee McCoy In the night, a young boy goes missing from his bedroom. Police detective Austin Black assures desperate single mother Eva Billows that he'll find her son. With his search-and-rescue bloodhound, Justice, Austin covers every inch of Sagebrush, Texas. And when Eva insists on helping, Austin can't turn her away. Eva trusts no one, especially police, but this time, Austin—and Justice—can't let her down. Detection Mission by Margaret Daley While looking for a missing child, K-9 detective Lee Calloway and his border collie find a mystery woman running for her life. She has no idea who she is—or why someone is after her. "Heidi" could be a criminal concealing the truth, but Lee's gut instinct says she's innocent. He vows to protect her until her memory returns, but someone is desperate to ensure that never happens.

**Above Beyond** J.A. Landry, 2015-06-12 "Above Beyond" delivers a unique take on the age-old good against evil theme in a very refreshing, surprisingly uncommon, and perhaps controversial way. As the Fallen One uses children as pawns to convert and control perniciousness, the heavenly bodies step in for the first time in 2015 years to interrupt the evil process. Both the angel of evil and God of holiness recruit and show the way. The fray and the sub-plots are stunning, and read as no story ever told or read before. Biblical verse and passage is sensitive and sensible in presentation and prop-up the profound novel throughout.

*Competition Law of the European Union* Van Bael & Bellis, 2021-03-01 This new Sixth Edition of

a major work by the well-known competition law team at Van Bael & Bellis in Brussels brings the book up to date to take account of the many developments in the case law and relevant legislation that have occurred since the Fifth Edition in 2010. The authors have also taken the opportunity to write a much-extended chapter on private enforcement and a dedicated section on competition law in the pharmaceutical sector. As one would expect, the new edition continues to meet the challenge for businesses and their counsel, providing a thoroughly practical guide to the application of the EU competition rules. The critical commentary cuts through the theoretical underpinnings of EU competition law to expose its actual impact on business. In this comprehensive new edition, the authors examine such notable developments as the following: important rulings concerning the concept of a restriction by object under Article 101; the extensive case law in the field of cartels, including in relation to cartel facilitation and price signalling; important Article 102 rulings concerning pricing and exclusivity, including the Post Danmark and Intel judgments, as well as standard essential patents; the current block exemption and guidelines applicable to vertical agreements, including those applicable to the motor vehicle sector; developments concerning online distribution, including the Pierre Fabre and Coty rulings; the current guidelines and block exemptions in the field of horizontal cooperation, including the treatment of information exchange; the evolution of EU merger control, including court defeats suffered by the Commission and the case law on procedural infringements; the burgeoning case law related to pharmaceuticals, including concerning reverse payment settlements; the current technology transfer guidelines and block exemption; procedural developments, including in relation to the right to privacy, access to file, parental liability, fining methodology, inability to pay and hybrid settlements; the implementation of the Damages Directive and the first interpretative rulings. As a comprehensive, up-to-date and above

all practical analysis of the EU competition rules as developed by the Commission and EU Courts, this authoritative new edition of a classic work stands alone. Like its predecessors, it will be of immeasurable value to both business persons and their legal advisers.

Algorithms for Functional Programming John David Stone,2018-10-27 This book presents a variety of widely used algorithms, expressing them in a pure functional programming language to make their structure and operation clearer to readers. In the opening chapter the author introduces the specific notations that constitute the variant of Scheme that he uses. The second chapter introduces many of the simpler and more general patterns available in functional programming. The chapters that follow introduce and explain data structures, sorting, combinatorial constructions, graphs, and sublist search. Throughout the book the author presents the algorithms in a purely functional version of the Scheme programming language, which he makes available on his website. The book is supported with exercises, and it is suitable for undergraduate and graduate courses on programming techniques.
