Sciences, Computer Science and Telecommunications Board, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on the Future of Voting: Accessible, Reliable, Verifiable Technology, 2018-09-30 During the 2016 presidential election, America's election infrastructure was targeted by actors sponsored by the Russian government. Securing the Vote: Protecting American Democracy examines the challenges arising out of the 2016 federal election, assesses current technology and standards for voting, and recommends steps that the federal government, state and local governments, election administrators, and vendors of voting technology should take to improve the security of election infrastructure. In doing so, the report provides a vision of voting that is more secure, accessible, reliable, and verifiable.

Beerman's Financial Year Book of Europe , 1976

China's Great Wall of Debt Dinny McMahon, 2018-03-13 A

stunning inside look at how and why the foundations upon which China has built the world's second largest economy, have started to crumble. Over the course of a decade spent reporting on the ground in China as a financial journalist, Dinny McMahon gradually came to the conclusion that the widely held belief in China's inevitable economic ascent is dangerously wrong. In this unprecedented deep dive, McMahon shows how, lurking behind the illusion of prosperity, China's economic growth has been built on a staggering mountain of debt. While stories of newly built but empty cities, white elephant state projects, and a byzantine shadow banking system, have all become a regular fixture in the press in recent years, McMahon goes beyond the headlines to explain how such waste has been allowed to flourish, and why one of the most powerful governments in the world has been at a loss to stop it. Through the stories of ordinary Chinese citizens, McMahon tries to make sense of the unique—and often bizarre—mechanics of the Chinese economy, whether it be the state's addiction to appropriating land from poor farmers; or why a Chinese entrepreneur decided it was cheaper to move his yarn factory to South Carolina; or why ambitious Chinese mayors build ghost

cities; or why the Chinese bureaucracy was able to stare down Beijing's attempts to break up the state's pointless monopoly over the distribution of table salt. Debt, entrenched vested interests, a frenzy of speculation, and an aging population are all pushing China toward an economic reckoning. China's Great Wall of Debt unravels an incredibly complex and opaque economy, one whose fortunes—for better or worse—will shape the globe like never before.
