Congress. House. Committee on Appropriations. Subcommittee on Agriculture, Rural Development, Food and Drug Administration, and Related Agencies, 2015

Network Security Administration Dr Issa Ngoie, 2022-09-18 Network security administrator is an individual that manages, monitors and administers security over one or more computer networks. A network security administrator primarily ensures that a network is secured from any internal or external security threats and incidents. A security administrator is the point person for a cybersecurity team. They are typically responsible for installing, administering and troubleshooting an organization's security solutions. They also write up security policies and training documents about security procedures for colleagues. There is a huge market for network security professionals starting from a fresher to an

executive level. There are over 110,000 Network Security jobs currently listed on LinkedIn alone, and a network security certification can help you land these jobs and pave the path towards a promising career. Employment of network and computer systems administrators is projected to grow 3 percent from 2021 to 2031, slower than the average for all occupations. Despite limited employment growth, about 23,900 openings for network and computer systems administrators are projected each year, on average, over the decade.
