The Privacy Papers Rebecca Herold,2001-12-20 Today, more than ever, organizations have to cope with increased concerns regarding privacy issues. These concerns are not limited to consumer fears about how information collected by Web sites will be used or misused. They also involve broader issues, including data collected for direct response marketing, privacy of financial and health records, identity theft, and fraud. Employees are raising questions about acceptable use of phones, e-mail, the Web, and if and when employers can monitor use. Employers find that without policies governing use of these assets, they have no legal basis for action against employees. The Privacy Papers: Managing Technology, Consumer, Employee, and Legislative Actions is a book for C-level executives, IT managers, HR managers, security officers, privacy officers, and legal professionals. It covers all aspects of technology and legislation that enable privacy and also those that place it at risk. This how-to guide presents sample policies for employee training, awareness, and acceptable use; covers why companies must protect data and how to do it; describes the technology that makes information more private; and lists and summarizes major federal and international privacy legislation. Corporate espionage can put sensitive company information such as intellectual property, product development, marketing plans, and customer files at risk. With the ever-increasing legislation concerning privacy, it is important for executives to stay up to date. The Privacy Papers will ensure that any company conducting business domestically or internationally will understand how policies governing use of their assets will affect daily operations.

AVIEN Malware Defense Guide for the Enterprise David Harley, 2011-04-18 Members of AVIEN (the Anti-Virus Information Exchange Network) have been setting agendas in malware management for several years: they led the way on generic filtering at the gateway, and in the sharing of information about new threats at a speed that even anti-virus companies were hard-pressed to match. AVIEN members represent the best-protected large organizations in the world, and millions of users. When they talk, security vendors listen: so should you. AVIEN's sister organization AVIEWS is an invaluable meeting ground between the security vendors and researchers who know most about malicious code and anti-malware technology, and the top security administrators of AVIEN who use those technologies in real life. This new book uniquely combines the knowledge of these two groups of experts. Anyone who is responsible for the security of business information systems should be aware of this major addition to security literature. * "Customer Power" takes up the theme of the sometimes stormy relationship between the antivirus industry and its customers, and tries to dispel some common myths. It then considers the roles of the independent researcher, the vendor-employed specialist, and the corporate security specialist. * "Stalkers on Your Desktop" considers the thorny issue of malware nomenclature and then takes a brief historical look at how we got here, before expanding on some of the malware-related problems we face today. * "A Tangled Web" discusses threats and countermeasures in the context of the World Wide Web. * "Big Bad Bots" tackles bots and botnets, arguably Public Cyber-Enemy Number One. * "Crème de la CyberCrime" takes readers into the underworld of old-school virus writing, criminal business models, and predicting future malware hotspots. * "Defense in Depth" takes a broad look at DiD in the enterprise, and looks at some specific tools and technologies. * "Perilous Outsorcery" offers sound advice on how to avoid the perils and pitfalls of outsourcing, incorporating a few horrible examples of how not to do it. * "Education in Education" offers some insights into user education from an educationalist's perspective, and looks at various aspects of security in schools and other educational establishments. * "DIY Malware Analysis" is a hands-on, hands-dirty approach to security management, considering malware analysis and forensics techniques and tools. * "Antivirus Evaluation & Testing" continues the D-I-Y theme, discussing at length some of the thorny issues around the evaluation and testing of antimalware software. * "AVIEN & AVIEWS: the Future" looks at future developments in AVIEN and AVIEWS. * Unique, knowledgeable, unbiased and hype-free commentary. * Written by members of the anti-malware community; most malware books are written by outsiders. * Combines the expertise of truly knowledgeable systems administrators and managers, with that of the researchers who are most experienced in the analysis of malicious code, and the development and maintenance of defensive programs.

Digital Privacy Eric Faster, Chris Capra, 2020-08-16 Your data has already been sold... Get it back. There are so many times when we are online, and we need to make sure that our data is safe. We assume that we are doing a good job with a bit of anti-virus protection and carefully selecting what sites we visit. But when some of the big companies we trust, including Facebook, Google, and more, are willing to gather up as much data as they can about all our lives (whether online or not) and then sell it make money, it's hard to know how safe our information really is. This book is going to help you prevent that. While it may be difficult to keep this from happening, there are quite a few powerful steps that you can take. These help to keep the hackers out and will stop Google, Bing, and other companies from tracking you and will keep all your personal information nice and safe. It is amazing how much information companies are able to store about us and sell. Most are willing to hand it over because we don't even realize it is happening; we are just following instructions and typing what we are prompted to type. Taking the proper precautions ahead of time can make life a little easier and put you back in the drivers' seat when it comes to keeping your data safe. This book will go through some of the simple steps you can take to keep your information safe and ensure that no one can take your data without your permission again. Some of the things YOU WILL LEARN: * The TOP FIVE big companies already taking your information and selling it for mega-profits. * The biggest SOCIAL MEDIA MISTAKES you need to fix, right now. * The BEST HARDWARE to keep the trackers, and the hackers, out. * The minimum MUST HAVE SOFTWARE that will lock down your system. * How to SHUT DOWN HACKERS while you browse safely online. * BULLETPROOF YOUR EMAIL and shop online without a care in the world. * Safe online banking with these SECRET CREDIT CARDS. * How to DELETE YOURSELF from the internet in under five minutes. While there are many ways that companies can take your data and use it for their own benefit, there are just as many ways for you to kick them out and gain control again. Some of the controls are right in front of your eyes provided to you by the companies themselves, and some will require you to take additional steps on your own.
