Combinatorial Pattern Matching Amihood Amir, Laxmi Parida, 2010-06-26 This book constitutes the refereed proceedings of the 21st Annual Symposium on Combinatorial Pattern Matching, CPM 2010, held in New York, USA, in June 2010. The 28 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 53 submissions. The papers address all areas related to combinatorial pattern matching and its applications, such as searching and matching strings and more complicated patterns such as trees, regular expressions, graphs, point sets, and arrays with special focus on coding and data compression, computational biology, data mining, information retrieval, natural language processing, pattern recognition, string algorithms, string processing in databases, symbolic computing and text searching.

Unique Radio Innovation for the 21st Century Damith C. Ranasinghe, Quan Z. Sheng, Sherali Zeadally, 2010-09-22 Are you an engineer or a researcher developing RFID systems? Are you a manager considering deploying RFID-based applications? If so, this book is for you. Covering modern RFID systems, the challenges to RFID implementation are addressed using specific industrial research examples and common integration issues. The primary focus is on answering questions surrounding building scalable global Internet-based RFID networks. Key topics include RFID data management, RFID data processing and integration, Real-Time Locating Systems (RTLS) and sensors. The book considers the challenges of and solutions to building and exploiting global networks to guarantee one of the most important business drivers for modern RFID technology: traceability. The authors have drawn together RFID applications from the retail supply chain, asset and product lifecycle management, anti-counterfeiting and cold chain management to explore how global traceability networks can be created using RFID and sensor technologies. They present insights from world's leading research laboratories.

Project Cain Geoffrey Girard, 2013-09-03 Jeff discovers he's a serial killer clone—and he's got to track down others like him before it's too late in this Bram Stoker Award-nominated novel, a thrilling YA companion to *Cain's Blood*. This dark, literary thriller is a story about blood: specifically, the DNA of the world's most notorious serial killers, captured and cloned by the Department of Defense to develop a new "breed" of bio-weapons. The program is now in Stage Three—with dozens of young male clones from age ten to eighteen kept and monitored at a private facility without any realization of who they really are. Some are treated like everyday kids. Others live prescribed lives to replicate the upbringing of their DNA donors. All wonder why they can't remember their lives before age ten. When security is breached and the most dangerous boys are set free by the now-insane scientist who created them, only one young man can help find the clones before their true genetic nature grows even more horrific than the original models: a fifteen-year-old boy, an every-boy...who has just learned that he is the clone of Jeffrey Dahmer.

Stem Cells and Their Potential for Clinical Application Nadja M. Bilko, Boris Fehse, Wolfram Ostertag, Carol Stocking, Axel R. Zander, 2009-03-16 The NATO-ASI conference Stem Cells and Their Potential for Clinical Application featured cutting-edge presentations ranging from laboratory research findings to the latest therapeutic applications. This book features contributions from many of the leading international scientists from North America and Western and Eastern Europe who participated in this conference. Articles cover a broad range of hot topics in stem cell and leukemia research.

Advanced Intelligent Computing. Theories and Applications De-Shuang Huang, Martin McGinnity, Laurent Heutte, Xiao-Ping Zhang, 2010-08-14 The International Conference on Intelligent Computing (ICIC) was formed to provide an annual forum dedicated to the emerging and challenging topics in artificial intelligence, machine learning, pattern recognition, image processing, bioinformatics, and computational biology. It aims to bring together researchers and practitioners from both academia and industry to share ideas, problems, and solutions related to the multifaceted aspects of

intelligent computing. ICIC 2010, held in Changsha, China, August 18-21, 2010, constituted the 6th - ternational Conference on Intelligent Computing. It built upon the success of ICIC 2009, ICIC 2008, ICIC 2007, ICIC 2006, and ICIC 2005, that were held in Ulsan, Korea, Shanghai, Qingdao, Kunming and Hefei, China, respectively. This year, the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing. Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. Therefore, the theme for this conference was “Advanced Intelligent Computing Technology and Applications.” Papers focusing on this theme were solicited, addressing theories, methodologies, and applications in science and technology.

Cell of Immunoglobulin Synthesis Benvenuto Pernis,2012-12-02 Cells of Immunoglobulin Synthesis documents the proceedings of a symposium on Cells of Immunoglobulin Synthesis held at Arden House, on the Harriman Campus of Columbia University from June 9-11, 1978. The meeting was the third of the P & S Biomedical Sciences Symposia. Starting with the opening address on B lymphocyte differentiation and the tolerance problem, the remainder of the book presents the contributions made by researchers at the symposium. These contributions are organized into seven parts. Part I contains studies on immunoglobulin genes, messages, and molecules. Part II presents studies on cellular immunoglobulin production. Part III examines membrane immunoglobulins while Part IV focuses on immunoglobulins as regulatory molecules. Part V deals with lymphocyte hybrids. Part VI examines immunoglobulin idiotypes while Part VII contains papers on the ontogeny of immunoglobulin-synthesizing cells.

T Cell Hybridomas H.v. Boehmer,W. Haas,G. Köhler,F. Melchers,J. Zeuthen,2012-12-06 For more than ten years cell fusion techniques have been applied in studies on various lymphocyte functions. Ig expression was first studied in hybrids obtained by fusing myeloma cells with fibroblasts (1) or lymphomas (2), both of which do not produce Ig, and with Ig producing myelomas (3) or human blood lymphocytes (4). Kohler and Milstein (5) fused a myeloma with spleen cells from immunized mice. Up to 10% of the hybrids obtained secreted antibodies specific for the immunizing antigen. This suggested that plasma cells preferenti ally fused with the myeloma cells, a finding which was of enormous practical value. It was found that both Band T lymphocytes could be fused with the T cell tumor BW5147, which is however not permissive for Ig synthesis (6). A very large number of T cell hybridomas were generated by fusing BW5147 with cell populations containing in vivo or in vitro activated cells (7). The hybrids showed no specific T cell functions and binding assays for T cell receptors were not available. In particular, no hybrids were obtained which expreS1ed specific cytolytic activity that could be tested in short-term Cr release assays (8). However, the frustrations expressed about these failures, published in January, 1978 (9), were relieved by Taniguchi and Miller's publication a few months later of T cell hybridomas producing antigen-specific suppressor factors (10). Unfortunately, their hybrids rapidly lost factor production.

Innovations and Technologies in Science/STEM Education: Opportunities, Challenges and Sustainable Practices Wang-Kin Chiu,Hon-Ming Lam,Morris Siu Yung Jong,2024-04-01 In our digital era, harnessing innovations and emerging technologies to support teaching and learning has been an important research area in the field of education around the world. In science/STEM education, technologies can be leveraged to present

and visualize scientific theories and concepts effectively, while the development of pedagogic innovations usually requires collective, interdisciplinary research efforts. In addition, emerging technologies can better support teachers to assess students' learning performance in STEM subjects and offer students viable virtual environments to facilitate laboratory-based learning, thereby contributing to sustainable development in both K-12 and higher education.

Antimicrobial Resistance and Implications for the 21st Century I.W. Fong,Karl Drlica,2007-11-15 This comprehensive, up-to-date volume defines the issues and offers potential solutions to the challenges of antimicrobial resistance. The chapter authors are leading international experts on antimicrobial resistance among a variety of bacteria, viruses including HIV and herpes, parasites and fungi. The chapters explore the molecular mechanisms of drug resistance, the immunology and epidemiology of resistance strains, clinical implications and implications on research and lack thereof, and prevention and future directions.
