*The Circle* Dave Eggers,2013-10-08 INTERNATIONAL BESTSELLER • A bestselling dystopian novel that tackles surveillance, privacy and the frightening intrusions of technology in our lives—a “compulsively readable parable for the 21st century” (Vanity Fair). When Mae Holland is hired to work for the Circle, the world’s most powerful internet company, she feels she’s been given the opportunity of a lifetime. The Circle, run out of a sprawling California campus, links users’ personal emails, social media, banking, and purchasing with their universal operating system, resulting in one online identity and a new age of civility and transparency. As Mae tours the open-plan office spaces, the towering glass dining facilities, the cozy dorms for those who spend nights at work, she is thrilled with the company’s modernity and activity. There are parties that last through the night, there are famous musicians playing on the lawn, there are athletic activities and clubs and brunches, and even an aquarium of rare fish retrieved from the Marianas Trench by the CEO. Mae can’t believe her luck, her great fortune to work for the most influential company in the world—even as life beyond the campus grows distant, even as a strange encounter with a colleague leaves her shaken, even as her role at the Circle becomes increasingly public. What begins as the captivating story of one woman’s ambition and idealism soon becomes a heart-racing novel of suspense, raising questions about memory, history, privacy, democracy, and the limits of human knowledge.

**Digital Communication over Fading Channels** Marvin K. Simon,Mohamed-Slim Alouini,2005-02-11 The four short years since Digital Communication over FadingChannels became an instant classic have seen a virtual explosion ofsignificant new work on the subject, both by the authors and bynumerous researchers around the world. Foremost among these is agreat deal of progress in the area of transmit diversity andspace-time coding and the associated multiple input-multiple output(MIMO) channel. This new edition gathers these and other results,previously scattered throughout numerous publications, into asingle convenient and informative volume. Like its predecessor, this Second Edition discusses in detailcoherent and noncoherent communication systems as well as a largevariety of fading channel models typical of communication linksfound in the real world. Coverage includes single- and multichannelreception and, in the case of the latter, a large variety ofdiversity types. The

moment generating function (MGF)-based approach for performance analysis, introduced by the authors in the first edition and referred to in literally hundreds of publications, still represents the backbone of the book's presentation. Important features of this new edition include: \* An all-new, comprehensive chapter on transmit diversity, space-time coding, and the MIMO channel, focusing on performance evaluation \* Coverage of new and improved diversity schemes \* Performance analyses of previously known schemes in new and different fading scenarios \* A new chapter on the outage probability of cellular mobile radio systems \* A new chapter on the capacity of fading channels \* And much more Digital Communication over Fading Channels, Second Edition is an indispensable resource for graduate students, researchers investigating these systems, and practicing engineers responsible for evaluating their performance.

*Applications to Marine Disaster Prevention* Naomi Kato, 2018-04-22 This book focuses on the recent results of the research project funded by a Grant-in-Aid for Scientific Research (S) of the Japan Society for the Promotion of Science (No. 23226017) from FY 2011 to FY 2015 on an autonomous spilled oil and gas tracking buoy system and its applications to marine disaster prevention systems from a scientific point of view. This book spotlights research on marine disaster prevention systems related to incidents involving oil tankers and offshore platforms, approaching these problems from new scientific and technological perspectives. The most essential aspect of this book is the development of a deep-sea underwater robot for real-time monitoring of blowout behavior of oil and gas from the seabed and of a new type of autonomous surface vehicle for real-time tracking and monitoring of oil spill spread and drift on the sea surface using an oil sensor. The mission of these robots is to provide the simulation models for gas and oil blowouts or spilled oil drifting on the sea surface with measured data for more precision of predictions of oil and gas behavior.
