*Web Server Technology* Nancy J. Yeager,Robert E. McGrath,1996-03 The success of the web depends not only on the creation of stimulating and valuable information, but also on the speed, efficiency and convenient delivery of this information to the Web consumer. This authoritative presentation of web server technology takes you beyond the basics to provide the underlying principles and technical details of how WWW servers really work. It explains current technology and suggests enhanced and expanded methods for disseminating information via the Web. Features: Covers measurement of WWW component performance--the networks, server hardware, and operating systems--and suggests alternative Web server software designs for improving performance. Explains the costs and benefits of mirroring and caching Web documents. Surveys the web's current search tools and uses the library system as a model layout to illustrate indexing, searching, and retrieval techniques. Assesses web security hazards and presents mechanisms for combating these vulnerabilities, including an in-depth discussion of firewalls. Analyzes the risks and explains the technologies used in a variety of services available for making monetary transactions online.

Engineers for system vendors, systems integrators, major resellers, end-users, and representatives from Hewlett-Packard, Novell, IBM, Compaq, Microsoft, and NEC share their ideas and experience on such to

**Web Servers Succinctly** Marc Clifton,2017-02-06 The concept of a web server has become fuzzy because the server is now entwined with the dynamic requirements of web applications. Handling a request is no longer the simple process of send back the content of this file, but instead involves routing the request to the web application, which, among other things, determines where the content comes from. In *Web Servers Succinctly*, author Marc Clifton provides great insights on the benefits of building your own web server, and covers different options available for threading, work processes, session management, routing, and security.

*Web Caching and Content Delivery* A. Bestavros,M. Rabinovich,2001-12-14 The International Web Content Caching and Distribution Workshop (WCW) is a premiere technical meeting for researchers and practitioners interested in all aspects of content caching, distribution and delivery on the Internet. The 2001 WCW meeting was held on the Boston University Campus. Building on the successes of the five previous WCW meetings, WCW01 featured a strong technical program and record participation from leading researchers and practitioners in the field. This book consists of all the technical papers presented at WCW'01. It includes 20 full papers and four R&D synopses that were presented at the workshop. The collection reflects the latest research in this important area, including such topics as Content Delivery Networks (CDNs), tools and methodology of performance measurements, Web characterization as relates to caching and content distribution, scalable web server architectures, cache prefetching, emerging new edge services, and delivery of streaming content.

**IBM HTTP Server on z/OS: Migrating from Domino-powered to Apache-powered** Edward McCarthy,IBM Redbooks,2017-07-13 Users of IBM® z/OS® for the past several years had a choice of two HTTP Servers that they can use. Now, one server became strategic while the other is no longer supported with z/OS V2.2. IHS powered by Apache supports IPv6 and 64-bit execution and includes security authentication and authorization capabilities that are similar to those capabilities that are provided in IHS powered by IBM Domino®. This IBM Redpaper™ publication is aimed at technicians who are responsible for planning and deploying system software. It provides informationon about the various features that are available in IBM HTTP Server powered by Apache. It also provides guidance about how to upgrade from the old product to the new product.

**Performance Tuning for IBM Security Directory Server** Annemarie Fitterer,Dave Bachmann,David Butler,Ben Matteson,Ramamohan T. Reddy,Sujay Shinde,Rick Smith,IBM Redbooks,2014-04-02 In today's highly connected world, directory servers are the IT cornerstone of many businesses. These components of the corporate infrastructure are the foundation of authentication systems for internal and, more commonly, external user populations. Managing a directory server with several hundred internal users is not all that difficult. However, managing a directory server with several million external users in all 24 time zones throughout the world is a much more daunting task. IBM® Security Directory Server software can handle millions of entries, given the right architecture, configuration, and performance tuning. However, that tuning can differ greatly from tuning for a smaller server with only a few hundred thousand entries. Managing and tuning a directory server of this size requires a change in mindset. Tuning and performance must be a focus even before the hardware is ordered. A proactive approach must be taken after installation also, including the pretuning steps to better interface with other products to make installations and migrations successful, and then regular maintenance to keep the directory running smoothly. This IBM Redbooks® publication is the accumulation of lessons learned in many different real-world environments, including a 24-server fault tolerant configuration with more than 300 million entries. The authors pooled their knowledge and resources to provide the most comprehensive performance view possible, from hardware to software, sort heaps to buffer pools, and table cardinalities. In large directory server deployments, use this document as a guide for how to get the right fit for your environment.

*Server Time Protocol Planning Guide* Octavian Lascu,Hans-Peter Eckam,George Kozakos,Paulo Vitor Pereira,IBM Redbooks,2016-04-12 Server Time Protocol (STP) is a server-wide facility that is implemented in the Licensed Internal Code (LIC) of the IBM® zEnterprise Servers (zEC12, z196 and z114), System z10™ Enterprise Class (z10 EC), System z10 Business Class (z10 BC), IBM System z9® Enterprise Class (z9 EC), System z9 Business Class (z9 BC), and zSeries® z990 and z890 servers. It provides improved time synchronization in a sysplex or non-sysplex configuration. This IBM Redbooks® publication is intended for infrastructure architects and system programmers who need to understand the IBM STP functions. Readers are expected to be generally familiar with System z® technology and terminology. This book provides planning information for Server Time Protocol functions and associated software support. For more detailed installation, operation, and recovery information, refer to the companion books *Server Time Protocol Implementation Guide*, SG24-7281, and *Server Time Protocol Recovery Guide*, SG24-7380.

*The Best Damn Server Virtualization Book Period* Rogier Dittner,David Rule,2011-04-18 Server Sprawl and escalating IT costs have managers and system administrators scrambling to find ways to cut costs and reduce Total Cost of Ownership of their physical infrastructure. Combining software applications onto a single server, even if those applications are from the same software vendor, can be dangerous and problems hard to troubleshoot. Virtualization allows you to consolidate many servers onto a single physical server reducing hardware, electrical, cooling, and administrative costs. These virtual servers run completely independent of each other so if one crashes the other are not affected. Planning and implementing a server consolidation is a complex process. This book details the requirements for such a project, includes sample forms and templates, and delivers several physical to virtual migration strategies which will save both time and costs. Readers of this book will easily be able to plan and deploy VMware, Microsoft Virtual Server, and Xen. Create a virtual network to exchange information or provide a service to other virtual machines or computers Use virtualization to support removable media such as CD or DVD optical disks Reduce server costs, administration overhead, and complexity

*WebSphere Application Server V8: Administration and Configuration Guide* Martin Bentancour,Libor Cada,Jing Wen Cui,Marcio d'Amico,Ural Emekci,Sebastian Kapciak,Jennifer Ricciuti,Margaret Ticknor,IBM Redbooks,2011-11-22 This IBM® Redbooks® publication provides system administrators and developers with the knowledge to configure an IBM WebSphere® Application Server Version 8 runtime environment, to

**Collaborative Web Hosting** Reaz Ahmed,Raouf Boutaba,2014-01-04 This brief presents a peer-to-peer (P2P) web-hosting infrastructure (named pWeb) that can transform networked, home-entertainment devices into lightweight collaborating Web servers for persistently storing and serving multimedia and web content. The issues addressed include ensuring content availability, Plexus routing and indexing, naming schemes, web ID, collaborative web search, network architecture and content indexing. In pWeb, user-generated voluminous multimedia content is proactively uploaded to a nearby network location (preferably within the same LAN or at least, within the same ISP) and a structured P2P mechanism ensures Internet accessibility by tracking the original content and its replicas. This new paradigm of information management strives to provide low or no-cost cloud storage and entices the end users to upload voluminous multimedia content to the cloud data centers. However, it leads to difficulties in privacy, network architecture and content availability. Concise and practical, this brief examines the benefits and pitfalls of the pWeb web-hosting infrastructure. It is designed for professionals and practitioners working on P2P and web management and is also a useful resource for advanced-level students studying networks or multimedia.

**Configuration of Microsoft ISA Proxy Server and Linux Squid Proxy Server** Dr. Hidaia Mahmood Alassouli,2020-04-02 a lot of technicians switch between ISA server and Squid server, I decided to write this paper to present some reference when configuring ISA and Squid. There a lot of issues that not covered, and you can go to the manual of ISA server and Squid server for detailed configuration of ISA and Squid. The paper is composed from two parts 1. Microsoft ISA server 2004 Configuration 2. Linux Squid Server Configuration Note that, this work was done without proper simulation, because of the lack of resources, as testing firewall configuration requires many computers, with one of them should have many network cards. Also the ISA server is not used in the computer center now. KEYWORDS: Internet Security Acceleration Server, ISA

Server, Squid Server, Proxy, Firewall.

Designing Active Server Pages Scott Mitchell,2000 Active Server Pages (ASP) is one of the most popular and accessible methods for developing dynamic web pages. As the number of web pages grows and expands into entire web applications, performing such routine tasks as maintaining the pages, upgrading the scripts, and diagnosing and correcting bugs becomes a nightmare. Designing Active Server Pages shows ASP developers how to reuse code by looking for common functionality and by separating the presentation element of web pages from script. With a focus on techniques and features available in ASP 3.0 and VBScript 5.0+, topics include: • Including scripting blocks or code libraries using the #include server-side directive or the Server.Transfer method • Developing and using classes by using the ClassEnd Class construct added to VBScript 5.0 • Maximizing ASP's language independence by using another scripting language (like JScript, Perl, or Python) • Creating simple COM components to encapsulate common functionality by using the Microsoft Script Component Wizard • Taking advantage of existing third-party components to perform specialized operations Along with discussing the techniques for maximizing code reuse, Designing Active Server Pages provides concrete code examples that put these techniques into practice. Chapters indicate how to reuse code for HTML forms and for database access and maintenance, which are the two areas in which ASP programmers typically find themselves reinventing the wheel. Designing Active Server Pages is an indispensable resource for the ASP programmer who wants to make the transition from writing scripts one page at a time to developing powerful, modular, maintainable ASP pages.
