The Civic World of Professional Associations in the Roman East Onno M. van Nijf,2023-01-16 Nijf, Onno M. van *The Civic World of Profesional Associations in the Roman East* 1997 This study examines the mentalité of craftsmen and traders in the Greek cities of the Roman empire through the epigraphic evidence for their membership of private associations based on shared profession. It places these associations firmly in the context of the civic world of the cities in which they were active. The author argues that such inscriptions are not straightforward and unproblematic records of reality, but rather were important elements in the strategies of self-definition practised by these associations. Epigraphic commemoration was used to transform private activities into public events; epitaphs and honorific inscriptions spoke a public language which aimed to present the associations of craftsmen and traders as status groups alongside other, well-established groups. The author investigates how successful the members of professional associations were in this form of epigraphic self-fashioning, through a discussion of their role in public ceremonial. The associations were present in public banquets and distributions, they took part in public processions, and they had reserved seats in theatres and stadia of the cities. Professional associations can thus be seen as taking their place in the hierarchy of status groups which made up the Greek city under Roman rule. This book makes an important contribution to the study of private sociability in the ancient world; it sheds new light on the nature of civic life in the Greek cities of the Roman empire; and it proposes a new approach to reading epigraphy.

Pro DLR in .NET 4 Chaur Wu, 2011-07-29 Microsoft's Dynamic Language Runtime (DLR) is a platform for running dynamic languages such as Ruby and Python on an equal footing with compiled languages such as C#. Furthermore, the runtime is the foundation for many useful software design and architecture techniques you can apply as you develop your .NET applications. *Pro DLR in .NET 4* introduces you to the DLR, showing how you can use it to write software that combines dynamic and static languages, letting you choose the right tool for the job. You will learn the core DLR components such as LINQ expressions, call sites, binders, and dynamic objects—and how they work together to achieve language interoperability. You'll see how to mix and match objects and functions from compiled and dynamic languages, so you can write code in the language of your choice while taking advantage of libraries written in other languages. And you'll discover how the various languages interoperate behind the scenes. With the basics out of the way, the book then details the various ways you can leverage the DLR in the design and architecture of your software applications. You'll learn about runtime code generation, which lets you avoid much of the boilerplate code typical in layered business applications. You'll see practical examples of using the DLR to build domain-specific languages, and you'll learn how the DLR helps enable aspect-oriented programming.
