Diagnostic and Therapeutic Antibodies Andrew J.T. George, Catherine E. Urch, 2008-02-02 Soon after the first description of monoclonal antibodies in 1976, there was enormous interest in the clinical application of antibodies, especially in the context of cancer. Antibodies appeared to offer the “magic bullet” that would allow the specific destruction of neoplastic cells. H-

ever, many years' effort resulted in very few cases of successful immu- therapy with antibodies. As a result there was a major backlash against antibody therapy, and the field lost a considerable amount of popularity. Fashion, in science as well as in other things, tends to be cyclical. Antibody-based therapy is once again attracting scientists and clinicians. There are several reasons for the renewed optimism; certainly the experience of the last two decades has provided a wealth of information about problems associated with antibody therapy, and possible solutions to these problems. Recombinant antibody engineering has rejuvenated the field, allowing both the modification of antibodies to improve their in vivo properties and the isolation of novel antibody molecules by such techniques as phage display. The results of recent clinical trials have demonstrated unequivocally the benefit of antibody therapy in a number of settings, and, finally, more careful consideration has been taken of the types of disease best treated using this approach.

Bridget Wilder: Spy-in-Training Jonathan

Bernstein,2016-05-31 Middle school meets Mission Impossible in this hilarious spy series for fans of Chris Rylander, Stuart Gibbs, and Ally Carter about a girl whose life is turned upside down when she discovers her father is a superspy. Up until Bridget's birthday the most exciting moment in her life was when Dale Tookey maybe, sort of, smiled at her one time. But that was before—before she found a mysterious present at her doorstep, before she was transported to a covert CIA agency called Section 23, and before she became Bridget Wilder: Spy-in-Training. Now Bridget's busting boys out of detention, being chauffeured by a talking car, and infiltrating the popular girls' clique to steal secret codes, all while undercover as a semi-awkward middle school girl. But will she be able to keep up with her new action-packed life? It is no secret—Bridget Wilder: Spy-in-Training is the start of an explosive new series packed with gadgets, humor, and best of all: girl power.

The 15th Workshop on the Algorithmic Foundations of Robotics (WAFR) was held on June 22-24, 2022, at the University of Maryland, College Park, Maryland. Each chapter represents an exciting state-of-the-art development in robotic algorithms that was presented at this 15th incarnation of WAFR. Different chapters

combine ideas from a wide variety of fields, spanning and combining planning (for tasks, paths, motion, navigation, coverage, and patrol), computational geometry and topology, control theory, machine learning, formal methods, game theory, information theory, and theoretical computer science. Many of these papers explore new and interesting problems and problem variants that include human-robot interaction, planning and reasoning under uncertainty, dynamic environments, distributed decision making, multi-agent coordination, and heterogeneity.

Suicide Gene Therapy Caroline J. Springer,2008-02-01 Gene therapy has expanded rapidly over the last decade. The number of clinical trials reported by 2001 included 532 protocols and 3436 patients. Phase I trials predominate with 359 trials of 1774 patients versus Phase II (57 trials with 507 patients) and Phase III (3 trials of 251 patients). The disease overwhelmingly targeted by gene therapy is cancer: involving 331 trials with 2361 patients. Despite the somewhat disappointing results of clinical trials to date, gene therapy offers tremendous promise for the future of cancer therapy. The area of gene therapy is vast, and both malignant and nonmalignant cells can be targeted. Suicide Gene Therapy: Methods and Reviews covers gene therapy that targets malignant cells in a treatment that has become known as “suicide gene therapy. ” Basically, this approach uses the transduction of cancer cells with a gene for a foreign enzyme that, when expressed, is able to activate a nontoxic prodrug into a highly cytotoxic drug able to kill the cancer cell population. This is a major area in cancer gene therapy—in 2001 this technique was represented by 52 clinical protocols with a total of 567 patients. Additional trials used multiple gene therapy protocols that also involved suicide gene therapy (83 with 497 patients), indicating that the interest in this area is considerable. Suicide Gene Therapy: Methods and Reviews aims to cover comprehensively,

both in theoretical and practical terms, the rapidly evolving area of suicide gene therapy for cancer.
