Shared Minds Michael Schrage,1990 Explores the role of tools and technologies in shaping the collaborative process.

Change Forces Michael Fullan,2012-11-12 Knowledge of the processes of educational change is said to be the missing ingredient in attempts to bring about educational innovation and reform. Whether these efforts involve grass roots innovation or large-scale societal reform, failure to understand and act on existing knowledge of the change process has accounted for the widespread lack of success in making educational improvements. This volume analyzes what is known about successful or productive change processes, and identifies corresponding action strategies at the individual, school, local and state levels. Included in this book is a major treatment of the topic of the 'ethics of planned change', a neglected topic in recent literature, especially since strategies for intervening in the change process are receiving more attention. This book is intended to be used by teachers in training and in service, teacher trainers, educational researchers, education historians and administrators.

Making up the Mind Chris Frith,2013-05-20 Written by one of the world's leading neuroscientists,Making Up the Mind is the first accessible account of experimental studies showing how the brain creates our mental world. Uses evidence from brain imaging, psychological experiments and studies of patients to explore the relationship between the mind and the brain Demonstrates that our knowledge of both the mental and physical comes to us through models created by our brain Shows how the brain makes communication of ideas from one mind to another possible

New Rules for the New Economy Kevin Kelly,1999 The classic book on business strategy in the new networked economy— from the author of the New York Times bestseller *The Inevitable* Forget supply and demand. Forget computers. The old rules are broken. Today, communication, not computation, drives change. We are rushing into a world where connectivity is everything, and where old business know-how means nothing. In this new economic order, success flows primarily from understanding networks, and networks have their own rules. In *New Rules for the New Economy*, Kelly presents ten fundamental principles of the connected economy that invert the traditional wisdom of the industrial world. Succinct and memorable, *New Rules* explains why these powerful laws are already hardwired into the new economy, and how they play out in all kinds of business—both low and high tech— all over the world. More than an overview of new economic principles, it prescribes clear and specific strategies for success in the network economy. For any worker, CEO, or middle manager, *New Rules* is the survival kit for the new economy.

Facilitator's Guide to Participatory Decision-Making Sam Kaner,2011-03-10 The best book on collaboration ever written! —Diane Flannery, founding CEO, Juma Ventures And now this classic book is even better—much better. Completely revised and updated, the second edition is loaded with new tools and techniques. Two powerful new chapters on agenda design A full section devoted to reaching closure More than twice as many tools for handling difficult dynamics 70 brand-new pages and over 100 pages significantly improved

Applying Collaborative and E-learning Tools to Military Distance Learning Curtis Jay Bonk,2000 This report is a resource guide for those concerned with using collaborative and e-learning environments; those that use the Internet in a military training setting. The report is intended for training developers and planners, instructional designers, and program evaluators. The report offers a broad examination of findings from the educational literature, where the preponderance of research on e-learning tools and collaborative learning (i.e., groups of learners who have a common goal) has been conducted. Reviewed first are the emergence of e-learning tools and constructivism, the role of the instructor in such approaches, and the increasing importance of learner-centered approaches to instruction. Appropriate quantitative and qualitative research methodologies are then described. A summary of relevant findings on collaborative tools, individual differences, and learning communities is also provided. Suggestions are made for experiments that test the adaptability to military training environments of e-learning and collaborative learning methods emanating from education. Ten primary and 17 secondary experiments are devised that derive from current psychological principles in

cognition, motivation, social factors, and individual differences as applied to Internet-enabled learning.--DTIC.

Management Development Through Cultural Diversity Ronnie Lessem, 2005-08-03 This stimulating, clearly written and well-structured text is a comprehensive introduction to the principles of management and organizational behavior, as well as a corrective to the Eurocentric bias of most management texts. This book focuses on four domains of management--primal, rational, developmental and metaphysical. It develops a transcultural perspective drawing on insights from across the world to examine different management styles, cultures and stages of business development. Each section examines core management theory and literature, cultural orientation and related prominent theo.

Global Networks Linda Marie Harasim, 1993 Global Networks takes up the host of issues raised by the new networking technology that now links individuals, groups, and organizations in different countries and on different continents. The 21 contributions focus on the implementation, applications and impact of computer-mediated communication in a global context.

Mavericks at Work William C. Taylor, Polly G. LaBarre, 2009-03-17 The first book to document this change, Mavericks at Work is business edutainment for a smart, ambitious readership, profiling some of the most exciting—and often eccentric—CEOs in the United States, while detailing their remarkable strategies for success. Who's going to write the next chapter in the saga of American business? Who's going to chronicle the best way to compete, the new way to win? That's the mission of Mavericks at Work, a book that profiles a network of rebels who are creating a new business model that makes use of fresh principles and captures what it means to be a state-of-the-art organization. Including such pioneering companies as ING Direct, Southwest Airlines, Pixar, HBO, Anthropologie, Craigslist, Netflix, and Commerce Bank, this book is nothing short of a lively new intellectual agenda for business.

The Social Brain Jean Decety, 2020-08-18 A range of empirical and theoretical perspectives on the relationship between biology and social cognition from infancy through childhood. Recent research on the developmental origins of the social mind supports the view that social cognition is present early in infancy and childhood in surprisingly sophisticated forms. Developmental psychologists have found ingenious ways to test the social abilities of infants and young children, and neuroscientists have begun to study the neurobiological mechanisms that implement and guide early social cognition. Their work suggests that, far from being unfinished adults, babies are exquisitely designed by evolution to capture relevant social information, learn, and explore their social environments. This volume offers a range of empirical and theoretical perspectives on the relationship between biology and social cognition from infancy through childhood. The contributors consider scientific advances in early social perception and cognition, including findings on the development of face processing and social perceptual biases; explore recent research on early infant competencies for language and theory of mind, including a developmental account of how young children become moral agents and the role of electrophysiology in identifying psychological processes that underpin social cognition; discuss the origins and development of prosocial behavior, reviewing evidence for a set of innate predispositions to be social, cooperative, and altruistic; examine how young children make social categories; and analyze atypical social cognition, including autism spectrum disorder and psychopathy. Contributors Lior Abramson, Renée Baillargeon, Pascal Belin, Frances Buttelmann, Sofia Cardenas, Michael J. Crowley, Fabrice Damon, Jean Decety, Michelle de Haan, Ghislaine Dehaene-Lambertz, Melody Buyukozor Dawkins, Xiao Pan Ding, Kristen A. Dunfield, Rachel D. Fine, Ana Fló, Jennifer R. Frey, Susan A. Good Faith Collaboration Joseph M. Reagle, Jr., 2012-09-21 How Wikipedia collaboration addresses the challenges of openness, consensus, and leadership in a historical pursuit for a universal encyclopedia. Wikipedia, the online encyclopedia, is built by a community—a community of Wikipedians who are expected to “assume good faith” when interacting with one another. In Good Faith Collaboration, Joseph Reagle examines this unique collaborative culture. Wikipedia, says Reagle, is not the first effort to create a freely shared, universal encyclopedia; its early twentieth-century ancestors include Paul Otlet's Universal Repository and H. G. Wells's proposal for a World Brain. Both these projects, like Wikipedia, were fuelled by new technology—which at the time included index cards and microfilm. What distinguishes Wikipedia from these and other more recent ventures is Wikipedia's good-faith collaborative culture, as seen not only in the writing and editing of articles but also in their discussion pages and edit histories. Keeping an open perspective on both knowledge claims and other contributors, Reagle argues, creates an extraordinary collaborative potential. Wikipedia's style of collaborative production has been imitated, analyzed, and satirized. Despite the social unease over its implications for individual autonomy, institutional authority, and the character (and quality) of cultural products, Wikipedia's good-faith collaborative culture has brought us closer than ever to a realization of the century-old pursuit of a universal encyclopedia.

The Student Leadership Guide Brendon Burchard, 2008-09-01 Experts Academy Press is proud to present the first and only leadership book on the market that is (1) intended for students, (2) written from both theoretical and popular viewpoints, and (3) structured with a real-world, service-oriented framework that students can instantly use to make a difference in their classrooms, communities, and early careers. Leadership is conceptualized from the principles that it is a collective and participative process, different from management, and firmly rooted in service. The book's framework--Envision, Enlist, Embody, Empower, Evaluate, and Encourage--reflects six key leadership practices students must learn in order to lead with competence and confidence. The Student Leadership Guide has been praised by educators and students alike for its theory-backed content and its practical, inspiring call to action and service.

New Challenges, New Tools for Defense Decisionmaking Stuart E. Johnson, Martin C. Libicki, Gregory F. Treverton, 2003-03-31 It is still easy to underestimate how much the collapse of the Soviet Union and the end of the Cold War?--and then the terrorist attacks of September 11, 2001?--transformed the task of American foreign and defense policymaking. In place of predictability (if a sometimes terrifying predictability), the world is now very unpredictable. In place of a single overriding threat and benchmark by which all else could be measured, a number of possible threats have arisen, not all of them states. In place of force-on-force engagements, U.S. defense planners have to assume asymmetric threats?--ways not to defeat U.S. power but to render it irrelevant. This book frames the challenges for defense policy that the transformed world engenders, and it sketches new tools for dealing with those challenges?--from new techniques in modeling and gaming, to planning based on capabilities rather than threats, to personnel planning and making use of best practices from the private sector.

Online Collaboration and Communication in Contemporary Organizations Kolbaek, Ditte, 2018-04-06 The digital age has introduced a deeper sense of connectivity in business environments. By relying more heavily on current technologies, organizations now experience more effective communication and collaboration opportunities. *Online Collaboration and Communication in Contemporary Organizations* is a critical scholarly resource that identifies the new practices and techniques for leading, knowledge sharing, and learning through the use of online collaboration. Featuring coverage on a broad range of topics such as online leadership, intercultural competence, and e-ethics, this book is geared toward professionals, managers, and researchers seeking current research on new practices for online collaboration and communication.

No More Teams Michael Schrage, 1995-04 By effectively using technological tools available in most workplaces, *No More Teams!* shows readers

how to go beyond the lazy clichés of teamwork to the practical benefits of collaboration.

Multimedia and Megachange W Michael Reed, John K Burton, 2020-07-26 The use of multimedia strikes at the very heart of traditional teaching and learning methods, and is changing the way educators think about the whole process of teaching and learning. Multimedia and Megachange spurs ideas for the use of interactive technology to revolutionize teaching and learning. It describes and analyzes issues and trends that are currently setting a research and development agenda for educators. Contributors to this volume explore all fronts on which computer technology are changing the educational process: concept and theory research application design Multimedia and Megachange opens up the exciting world of how technology is dramatically changing how teachers teach and students learn. It also highlights spin-off changes for classroom management, greater sources of information, and improved evaluation and grading techniques.

Enterprise Interoperability III Kai Mertins, Rainer Ruggaber, Keith Popplewell, Xiaofei Xu, 2008-03-25 Interoperability: the ability of a system or a product to work with other systems or products without special effort from the user is a key issue in manufacturing and industrial enterprise generally. It is fundamental to the production of goods and services quickly and at low cost at the same time as maintaining levels of quality and customisation. Composed of over 50 papers, Enterprise Interoperability III ranges from academic research through case studies to industrial and administrative experience of interoperability. The international nature of the authorship continues to broaden. Many of the papers have examples and illustrations calculated to deepen understanding and generate new ideas. A concise reference to the state of the art in software interoperability, Enterprise Interoperability III will be of great value to engineers and computer scientists working in manufacturing and other process industries and to software engineers and electronic and manufacturing engineers working in the academic environment.

Building Information Modeling André Borrmann, Markus König, Christian Koch, Jakob Beetz, 2018-09-19 Building Information Modeling (BIM) refers to the consistent and continuous use of digital information throughout the entire lifecycle of a built facility, including its design, construction and operation. In order to exploit BIM methods to their full potential, a fundamental grasp of their key principles and applications is essential. Accordingly, this book combines discussions of theoretical foundations with reports from the industry on currently applied best practices. The book's content is divided into six parts: Part I discusses the technological basics of BIM and addresses computational methods for the geometric and semantic modeling of buildings, as well as methods for process modeling. Next, Part II covers the important aspect of the interoperability of BIM software products and describes in detail the standardized data format Industry Foundation Classes. It presents the different classification systems, discusses the data format CityGML for describing 3D city models and COBie for handing over data to clients, and also provides an overview of BIM programming tools and interfaces. Part III is dedicated to the philosophy, organization and technical implementation of BIM-based collaboration, and discusses the impact on legal issues including construction contracts. In turn, Part IV covers a wide range of BIM use cases in the different lifecycle phases of a built facility, including the use of BIM for design coordination, structural analysis, energy analysis, code compliance checking, quantity take-off, prefabrication, progress monitoring and operation. In Part V, a number of design and construction companies report on the current state of BIM adoption in connection with actual BIM projects, and discuss the approach pursued for the shift toward BIM, including the hurdles taken. Lastly, Part VI summarizes the book's content and provides an outlook on future developments. The book was written both for professionals using or programming such tools, and for students in Architecture and Construction Engineering programs.
